Safety

- 1 The database query runs in a repeatable-read, read-only transaction.
- 1 The scoped database URL is never written to evidence.
- 1 The manifest must attest a real production cohort, tenant consent, and exclusion of seed/test data.
- 1 The report binds the pilot IDs and evidence references through SHA-256 digests without retaining PII.
- 1 Readiness requires the exact deployed Git revision and the full statement-to-activation event sequence.
