

Realistic development seed data catalog — 2026-08-15

Dataset profile

- Two synthetic Cameroon retail organizations, one English-default and one French-default
- XAF currency and Africa/Douala timezone
- 12 curated roles and 14 login personas per organization (including registration-flow accounts)
- 12 operational locations plus one registration-flow location per organization
- 12 sellable products per organization
- 12/12 products have at least 20 units available at the default POS location; actual starting availability is 83–140 units
- 12 suppliers, 7 brands, 7 categories, 7 units, 2 VAT rates, and 7 expense categories per organization where applicable
- Full coverage fixtures for purchasing/AP, accounting, inventory, payroll, reconciliation, compliance, offline POS, close assurance, and workflow assurance

Curated catalog

Category	Example products	Relevant units
Beverages	Spring water 1.5 L; Orange juice 1 L	Bottle, Liter
Staple foods	Long-grain rice; Wheat flour	Kilogram
Canned and packaged foods	Sardines in tomato sauce; Tomato paste	Can
Household cleaning	Laundry detergent; Dishwashing liquid	Pack, Bottle
Personal care	Bath soap; Toothpaste	Piece, Tube
Office supplies	A4 printer paper, 500 sheets	Pack
Small electronics	Portable Bluetooth speaker	Piece

No unused category or unit is permitted by the semantic verification. Placeholder/lorem labels, generic numbered categories, and irrelevant reference rows fail the seed.

POS proof

The runtime verifier used the same catalog, cart, tender, accounting, receipt, and inventory services as the application. It found 12 catalog items with positive test-ready stock, added seven distinct items, completed a cash payment, verified the completed/paid database records, and confirmed each affected inventory balance decreased by one.

Credentials

The local handoff file is `.seed-artifacts/seed-login-credentials.json`. It contains 28 synthetic development-only personas, login routes, role codes, permissions, module entitlements, default locations, scenarios, and the generated password. The path is Git-ignored. Passwords are never printed by the seed command.

Recommended first-organization personas:

- Super Admin — `super.admin.rds-org001@stockflow.test`
- Admin — `admin.rds-org001@stockflow.test`
- Branch Manager — `branch.manager.rds-org001@stockflow.test`
- Cashier/POS User — `cashier.rds-org001@stockflow.test`
- Inventory Manager — `inventory.manager.rds-org001@stockflow.test`
- Purchaser — `purchaser.rds-org001@stockflow.test`
- Accountant — `accountant.rds-org001@stockflow.test`
- HR Manager — `hr.manager.rds-org001@stockflow.test`
- Auditor — `auditor.rds-org001@stockflow.test`

Use the password from the local artifact or the final task handoff. These accounts are synthetic and must never be used in production.
