

Risk, Assumption, and Decision Log

Risk, assumption, decision and multidisciplinary review register

ENTERPRISE REMEDIATION REPORT

Published 2026-08-06

Evidence-led | contract-governed | accessibility-aware | rollout-ready

Truthful workflows. Explicit controls. Verifiable enterprise evidence.

Risk register

R-001	Inventory KPI definition disagrees with accounting or operator expectation	High	Critical	Finance control + inventory product	ADR-UI-002; shadow comparison; page-size/filter tests; named validation	Any unexplained old/new drift blocks cutover	Low
R-002	Currency migration changes persisted values rather than display only	Medium	Critical	Data architect	Schema/read audit; separate stored monetary code from formatter; no destructive migration	Roll back UI adapter; investigate data before retry	Low
R-003	Global entitlement enforcement locks legacy tenants out	High	Critical	Security/platform + billing	Observe → pilot → cohort; legacy entitlement migration; would-block telemetry	Denial spike or mismatch restores affected cohort to observe	Medium
R-004	UI hides a surface while server still allows it, or shows it while server denies it	High	High	Security/IAM	One capability object; route/action/API matrix; deep-link tests	Any parity mismatch blocks phase	Low
R-005	Redirect consolidation breaks saved links, locale, query, or analytics	Medium	High	Route-registry owner	Traffic instrumentation; locale/query contract; no-loop tests; deprecation window	Restore alias mapping/implementation	Low
R-006	Existing dirty-worktree changes are overwritten	High	High	Every package owner	Pre/post status capture; scoped patches; no reset/checkout; owner coordination	Stop on overlap; request owner decision	Low
R-007	Accessibility "fix" passes axe but fails real screen-reader use	High	High	Accessibility owner	Keyboard and NVDA/VoiceOver scripts with human reviewer	Validation failure reopens package	Low
R-008	Auth simplification removes required legal/security data or consent	Medium	Critical	Auth product + legal/security	Field classification ADR; defer fields to governed onboarding; consent preserved	Revert funnel cohort; retain accessible field repairs	Low

R-009	Theme migration produces unreadable mixed-mode screens	High	High	Design-system owner	Semantic tokens; route flags; contrast snapshots; expose only supported modes	Disable affected mode/route adapter	Low
R-010	Shared data-table abstraction erases domain-specific controls	Medium	High	Enterprise UX + domain owner	Contract supports adapters; pilot inventory; domain validation	Keep legacy table behind flag; revise contract	Low
R-011	Monolith decomposition changes behavior or offline/POS recovery	High	Critical	Domain engineering	Characterization tests; stable workflow boundaries; incremental extraction	Roll back extraction without data rollback	Medium
R-012	Export artifact contains sensitive or cross-tenant data	Medium	Critical	Security/privacy + audit	Server scope, redacted fixtures, content assertions, retention/access policy	Revoke artifact, incident response, suspend exporter	Low
R-013	Certification matrix becomes too large/flaky to block releases	High	High	QA/release	Risk tiers, deterministic fixtures, shard strategy, flake budget, quarantine rules	Failing blocking tier stops release; flaky tests require owner/expiry	Medium
R-014	Production performance budgets are accepted from development timing	Medium	High	SRE/performance	RUM or representative production telemetry; dev smoke marked non-performance	Missing representative data blocks performance claim	Low
R-015	EN/FR literal migration changes regulated/accounting meaning	Medium	High	Localization + domain control	Typed messages, glossary, bilingual expert review, pseudo-localization	Revert copy bundle; keep functionality	Low
R-016	Graph-based decomposition plan uses stale/partial dependencies	High	Medium	Architecture owner	Refresh graph; verify code paths manually; record extraction gaps	Do not use stale graph as approval evidence	Low
R-017	Country-pack/legal/accounting claims exceed evidence	Medium	Critical	Compliance authority	Dated provenance and qualified review; neutral UI language before approval	Remove/qualify claim; block certification	Low

R-018	Phone POS requirements enter scope without product decision	Medium	Medium	POS product	Explicit desktop/tablet boundary and change-control decision	Treat phone behavior as N/A until approved	Low
R-019	AI/copilot surfaces bypass new capability/action contracts	Medium	High	AI safety + platform	Register AI proposals as actions; human approval; injection/evaluation tests	Suspend unsafe agent version	Low
R-020	Support/training lags route and workflow changes	High	Medium	Change-management owner	Route map, release notes, playbooks, pilot training, support telemetry	Pause cohort expansion	Low

Assumptions

AS-001	Organization currency/timezone/default locale are sufficient roots for DisplayContext v1.	Medium	G0-02 / A-03	Schema/provider design may expand; estimate increases.
AS-002	Inventory totalValue in inventory levels is closer to approved stock valuation than selling-price multiplication.	Low	ADR-UI-002	A-01 metric design changes materially.
AS-003	Existing module catalog and evaluator should be evolved, not replaced.	High	ADR-UI-003	Capability program becomes larger.
AS-004	requestedModules is transitional commercial intent, not a complete billing ledger.	Medium	ADR-UI-003	Enforcement source and migration must change.
AS-005	Current shared route-state and command primitives are acceptable foundations.	High	B-03/C-00 pilot	New primitive work expands.
AS-006	EN and FR remain the release languages for this program.	High	Product decision	Certification matrix expands.
AS-007	XAF, XOF, EUR, and USD are sufficient fixture currencies for initial certification.	Medium	Finance/product decision	Add currency-specific precision/display cases.
AS-008	Existing local screenshots and smoke evidence are baseline-only.	High	B-06	No release consequence; current plan already requires fresh evidence.
AS-009	Three stable squads can be staffed for the 5–7 month scenario.	Low	Program planning	Calendar extends toward sequential scenario.
AS-010	No destructive schema change is required for UI remediation.	Medium	Gate 0 data review	Migration work needs separate approval and zero-loss plan.

Decision register

ADR-UI-001 DisplayContext	Platform + finance	G0 exit	Server-derived v1 from org settings; no silent currency fallback	Per-page formatting is rejected; client-only context is untrusted	Open
ADR-UI-002 Inventory KPI semantics	Finance + inventory	A-01 ready	Separate stock cost value, retail potential, and clearly named margin estimate	One ambiguous "Total Value/Profit Potential" is rejected	Open
ADR-UI-003 Entitlement source/enforcement	Security + billing	G0 exit	Evolve current evaluator; migrate source; staged enforce	Global big-bang is unsafe	Open
ADR-UI-004 Canonical routes	Product + UX	A-09/B-01	Purchases/suppliers, settings/locations/create, settings/tax-rates/create, modern auth after validation	Keep aliases only as redirects with expiry	Open
ADR-UI-005 State/error taxonomy	Backend + design system	A-02 ready	Extend current DashboardRouteState and typed service results	New parallel state component is rejected	Open
ADR-UI-006 Action artifact schema	Audit + backend	A-05 ready	Stable artifact ID, scope, filters, row count, hash/type, created/expires timestamps	Toast-only completion rejected	Open
ADR-UI-007 Appearance support	Product + design	B-04 ready	Three-mode end state; expose only modes certified on current routes	Dark-only is acceptable interim if stated honestly	Open
ADR-UI-008 Registration/onboarding	Auth product + legal/security	A-07 ready	Minimal account creation + resumable controlled setup	Current front-loaded setup remains only if evidence supports it	Open
ADR-UI-009 Support matrix	QA + product	B-06 ready	Chromium/Firefox/WebKit; keyboard; NVDA/VoiceOver; declared viewport per route	Narrower matrix needs customer/risk justification	Open
ADR-UI-010 Release authority	Executive sponsor	Gate 0 exit	Distributed sign-off by evidence boundary; one final release authority	Single-team self-certification rejected	Open

Highest-risk unresolved decisions

- 1 Entitlement source of truth and how legacy full-suite access migrates before enforcement.
- 2 Financial definition of inventory value and profit potential.
- 3 Supported appearance modes during the migration window.
- 4 Canonical auth implementation and minimum registration data.
- 5 Named human reviewers and realistic synthetic role/package fixtures.
- 6 Acceptable module-wave parallelism given shared-file overlap and the dirty worktree.

Reviewer-lens disposition

Enterprise/platform architecture	Material: owns contracts, dependencies, tenancy, and critical path.
Backend/domain/integration	Material: read models, actions, exports, failure contracts.
Data/database/migration	Material: money precision, provenance, zero-loss migration review.
Security/IAM/privacy/abuse	Material: capability parity, entitlement enforcement, redaction, tenant isolation.
Frontend/design systems	Material: route/state/table/form/token adoption and decomposition.
Workflow/service design	Material: auth, dense workflows, recovery, role cockpits.
Accessibility	Material: WCAG automation plus human screen-reader validation.
Localization/content	Material: EN/FR, money/date terminology, pseudo-localization.
Product/business process	Material: route choices, KPI semantics, onboarding, scope.
Quality/release assurance	Material: manifest, test pyramid, phase gates, evidence freshness.
SRE/DevSecOps/performance	Material: telemetry, budgets, rollout, incident recovery.
SaaS packaging/billing/growth/CS	Material: entitlement source, locked states, adoption, support.
Finance/OHADA/internal controls	Material: display truth, inventory value, export/close evidence.
Statutory/tax/payroll/privacy	Material in module waves; no certification without provenance/review.
Audit/evidence/records/data quality	Material: artifacts, correlation, retention, final evidence.
POS/inventory/offline	Material: inventory truth and POS/offline preservation.
Purchasing/AP/payment controls	Material: suppliers, dense AP workflows, maker-checker.
HRIS/payroll/privacy	Material: payroll wave and fixtures/redaction.
Payments/reconciliation	Material: suspense, proof, export, completeness states.
Accounting close/portal	Material: finance wave and accountant validation.
Analytics/BI/metrics	Material: KPI definitions, provenance, decision support.
AI/agent safety	Material but secondary: AI actions must inherit capability/artifact controls.
API/webhook/event/import/export	Material: server enforcement and evidence-producing exports.
Change/training/support	Material: route deprecation, rollout, adoption, incident playbooks.

No requested reviewer is immaterial to the complete remediation program; AI is secondary because this roadmap does not introduce a new model or autonomous capability.
