

Stoquify Agent Runtime Skill 017 Blocker Elimination and Phase 3 Entry Report

Generated: 2026-07-27T16:44:20.681Z **Decision:** REJECTED_NO_GO **Posture:** DEVELOPMENT_CONTINUES_PILOT_AND_PRODUCTION_FAIL_CLOSED **Activation authority:** false **Phase 3 authority:** false **GitHub/provider operations:** excluded by instruction

Executive Decision

Skill 016 is ready at 15/15 and preserves read-only analysis plus non-executing proposal authority. Skill 017 remains correctly rejected. The headline failures are repetitive: 31 credential codes, 152 operational codes, 21 Phase 2B checks, and 34 Phase 3 checks collapse into twelve dependency roots. B01 application build and B02 payroll immutability are ready; B03-B12 remain open.

The next phase is a controlled release-evidence tranche, not Phase 3. Close production target/secrets and statutory authority; produce one immutable candidate; complete credentials and operations; freeze cleanly; obtain independent gate 017; then enter Phase 2B at 23/23. Phase 3 follows only after a successful bounded pilot and separate authority.

No placeholder, dry run, local database, inferred identity, generated approval, or synthetic hash may become authority.

Current Snapshot

Gate	Result	Interpretation
Skill 016	15/15	Read-only/proposal-only ready
B01-B12	2/12	B01/B02 ready
Authorized scope	36/37	P2A-11 incomplete
Frozen manifest	206/207	1 mismatch; 8 drift paths
Worktree snapshot	470 changes	Active development, not candidate
Credential rotation	31 blockers	Authority/binding/15 classes/approval
Operational release	152 blockers	Seven repeated workstreams
Phase 2B	2/23	Not eligible
Phase 3	0/34	Not eligible
External inputs	1/13	102 raw blockers
Human interventions	9	Real owners/authorities required

The companion JSON contains every raw blocker code and evidence path.

Count Interpretation

- 206/207 plus eight drift paths is one stale-candidate problem.
- 36/37 with four blockers is four field assertions on P2A-11.
- 31 credentials = authority 8 + binding 6 + classifications 15 + ownership/approval 2.
- 152 operations = release/CI 29 + governance/owners 62 + scheduler 39 + alerting 17 + credential dependency 5.
- 21 Phase 2B checks are composition checks, not 21 features.
- 34 Phase 3 checks are those prerequisites plus thirteen pilot/authority checks.

B01-B12 Register

ID	Gate	Status	Facts	Next action
B01	Ready	READY	buildStatus=passed; buildExitCode=0	Preserve and bind this evidence to the final candidate.
B02	Ready	READY	triggers=9/9; blockedMutations=14/14	Preserve and bind this evidence to the final candidate.
B03	Blocked	BLOCKED_EXTERNAL_CONFIG	preflight=8/9; history=5/8; historyTarget=local	Provision the approved production target, deploy, and pass direct history health.
B04	Blocked	BLOCKED_EXTERNAL_CONFIG	secretChecks=2/8	Provision the three independent managed release secrets and rerun release preflight.
B05	Blocked	REQUIRES_EXPERT_REVIEW	sourceHashes=0/7	Return independently recomputed and checker-verified source hashes.
B06	Blocked	REQUIRES_EXPERT_REVIEW	reviewChecks=4/12; approvalArtifactVerified=false	Return the authentic signed expert decision and separate checker verification.
B07	Blocked	BLOCKED_DEPENDENCY	credentialStatus=BLOCKED; credentialBlockers=31	After stable managed references exist, complete all credential dispositions and evidence.
B08	Blocked	BLOCKED_DEPENDENCY	operationalStatus=BLOCKED; operationalBlockers=152	Complete owner, scheduler, alert, CI, governance, and credential evidence.
B09	Blocked	WAIT_FOR_STABLE_TRIGGER	freezeStatus=BLOCKED; verifiedFiles=206/207; runtimeDrift=8	After B01-B08 pass, cut a clean candidate and create a new immutable freeze.
B10	Blocked	BLOCKED_DEPENDENCY	governanceBlockers=50; freezeReady=false	Bind real product/security approvals and six accepted owner assignments to the freeze.
B11	Blocked	BLOCKED_DEPENDENCY	phase2b=2/23; eligible=false	After B01-B10 and gate 017 GO, rerun the 23-check entry gate.
B12	Blocked	NOT_STARTED	phase3=0/34; eligible=false	After a successful pilot, obtain the artifact-bound 34-check Phase 3 decision.

Twelve Root Causes

R01: Production database and migration history

- **Why:** No approved non-local PostgreSQL target is configured. Local dbakesman is quarantined with one unfinished migration, three missing repository migrations, and one checksum mismatch.
- **Owners:** Database Owner, Platform, Release Manager
- **Places:** what-next/prisma-migration-deployment-readiness.json; what-next/prisma-migration-history-health.json
- **Execution:** Provision approved target and restore proof; inject DATABASE_URL through managed deployment; run production preflight, deploy, then direct remote history health.
- **Acceptance:** 9/9 preflight; 8/8 remote history; no unfinished, missing, unknown, duplicate, or checksum findings.

R02: Managed production secrets

- **Why:** Presence and strength checks fail for the identity HMAC, receipt signing, and history cursor secrets.
- **Owners:** Security, Platform
- **Places:** what-next/release-secret-preflight.json; scripts/release-secret-preflight.js:60
- **Execution:** Generate three purpose-specific managed values; prove strength, distinction, non-reuse, and rotation ownership.

- **Acceptance:** 8/8 release checks, enforcement on, no value printed.

R03: Cameroon source and expert authority

- **Why:** Seven source hashes are unbound and no authentic qualified approval plus separate checker exists.
- **Owners:** OHADA Reviewer, Independent Checker, Payroll Product Owner
- **Places:** what-next/statutory-country-pack-review-preflight.json; what-next/statutory-country-pack-production-readiness.json
- **Execution:** Supply exact artifacts; recompute/bind all digests; record review decisions; separately verify signed approval.
- **Acceptance:** Review 12/12, production 12/12, hashes 7/7, approval verified.

R04: Immutable release and protected CI

- **Why:** Package, commit, artifact, manifest, evidence bundle, browser report, CI run, and attestations are not bound to one inactive candidate.
- **Owners:** Engineering Release, QA, Platform
- **Places:** operational release register; release evidence index; agent-ci-release-evidence-capture.js
- **Execution:** Build from clean approved commit, publish inactive artifact, run protected CI and enabled-pilot Playwright, capture signed query-free evidence.
- **Acceptance:** All 29 release/CI codes clear and every digest binds to one identity.

R05: Governance, approvals, and owners

- **Why:** No real product/security decisions or accepted primary/backup owners for six operational roles.
- **Owners:** Product, Security, Release Manager
- **Places:** operational release register; agent-governance-evidence-capture.js
- **Execution:** Bind distinct approvals and six primary/backup pairs to exact identity with runbook, escalation, acceptance, and coverage proof.
- **Acceptance:** All 62 governance/approval/owner codes clear.

R06: Scheduler and reconciliation

- **Why:** No provider schedule, workload identity, readiness/heartbeat, deployment attestation, concurrency proof, or three successful windows.
- **Owners:** Platform, SRE, Reconciliation Owner, Security
- **Places:** agent-scheduler-deployment-evidence-capture.js; agent-reconciler-evidence-capture.js
- **Execution:** Deploy inactive workload at approved identity; configure five-minute cadence and lease; capture controls; observe three consecutive windows.
- **Acceptance:** All 39 scheduler codes clear; readiness fresh; three windows complete.

R07: Alert lifecycle

- **Why:** HTTPS delivery, acknowledgement, retry, dead-letter, recovery, escalation, identities, and secret rotation are unproved.
- **Owners:** SRE, Security Incident Owner, On-call Backup
- **Places:** agent-alert-evidence-capture.js; agent-operational-release-gate.js:667
- **Execution:** Trigger controlled failure; prove SLO acknowledgement, retry, dead-letter, recovery, escalation, rotation, and old-version rejection.
- **Acceptance:** All 17 alerting codes clear and identities match owner registry.

R08: Credential ceremony

- **Why:** Authority 8, binding 6, fifteen credential classifications, and security owner/approval 2 remain blocked.

- **Owners:** Security, Platform, Workload Owners
- **Places:** credential rotation register; agent-credential-rotation-gate.js:97
- **Execution:** Create stable binding; classify 15 classes; rotate/restart/verify/revoke/reject every present credential; attest independently.
- **Acceptance:** 31/31 codes clear, 15/15 classes resolved, no value serialized.

R09: Stable tree and canonical freeze

- **Why:** Historical candidate is 206/207 with one mismatch and eight runtime drift paths; 470-change worktree is active development.
- **Owners:** Engineering Release, Agent Runtime Owner
- **Places:** freeze attestation; authorized-scope audit; agent-phase2a-freeze-commit-gate.js:217
- **Execution:** Review intended drift; finish R01-R08 against one identity; create clean checkout and exact manifest; rerun freeze and audit.
- **Acceptance:** 207/207, zero mismatch/drift, clean tree, FROZEN_COMMIT_VERIFIED, 37/37.

R10: Independent Skill 017 authority

- **Why:** NO-GO is correct while R01-R09 remain incomplete; code cannot manufacture release authority.
- **Owners:** Enterprise Release Authority
- **Places:** enterprise blocker status; promotion ledger; Skill 017 contract
- **Execution:** Review one immutable bundle and record APPROVED_GO or REJECTED_NO_GO with identity, conditions, expiry, and reference.
- **Acceptance:** Independent artifact-bound GO; promotion points 1-11 correct.

R11: Controlled Phase 2B pilot

- **Why:** Phase 2B is 2/23 and the pilot register is intentionally NOT_STARTED.
- **Owners:** Pilot, Product, Security, Finance Domain, Release
- **Places:** Phase 2B decision; pilot exit register; enabled-pilot E2E
- **Execution:** At 23/23 conduct separate allowlisted activation, preserve kill switch/no execution authority, observe pilot, test rollback, collect four distinct approvals.
- **Acceptance:** READY_FOR_PHASE3_REVIEW, zero prohibited violations, complete operations/incident evidence.

R12: Phase 3 authority

- **Why:** All 34 checks are blocked and phase3Authorized is false.
- **Owners:** Enterprise Release Authority, Product, Security, Finance Domain
- **Places:** Phase 3 decision; promotion ledger; agent-phase-promotion-gate.js:80
- **Execution:** After pilot exit rerun 34 checks, obtain separate GO, record points 12/13, begin read-and-draft only.
- **Acceptance:** 34/34 and independently recorded authority; gate grants no execution authority.

Exact Freeze Blockers

- FREEZE_COMMIT_CONTENT_MISMATCH: components/agents/__tests__/AgentCommandPanel.test.tsx
- POST_FREEZE_RUNTIME_DRIFT: actions/agents/__tests__/command-agent.actions.test.ts
- POST_FREEZE_RUNTIME_DRIFT: actions/agents/command-agent.actions.ts
- POST_FREEZE_RUNTIME_DRIFT: components/agents/AgentCommandPanel.tsx
- POST_FREEZE_RUNTIME_DRIFT: components/agents/__tests__/AgentCommandPanel.test.tsx

- `POST_FREEZE_RUNTIME_DRIFT:prisma/schema.prisma`
- `POST_FREEZE_RUNTIME_DRIFT:services/agents/___tests___/agent-output-validator.service.test.ts`
- `POST_FREEZE_RUNTIME_DRIFT:services/agents/command-agent-contracts.ts`
- `POST_FREEZE_RUNTIME_DRIFT:services/agents/skills/role-daily-brief.skill.ts`

Eight Runtime Drift Paths

- `actions/agents/___tests___/command-agent.actions.test.ts`
- `actions/agents/command-agent.actions.ts`
- `components/agents/AgentCommandPanel.tsx`
- `components/agents/___tests___/AgentCommandPanel.test.tsx`
- `prisma/schema.prisma`
- `schemas/agents/___tests___/agent-output-validator.service.test.ts`
- `schemas/agents/command-agent-contracts.ts`
- `schemas/agents/skills/role-daily-brief.skill.ts`

Review and deliberately accept or remove these paths. Do not blindly revert concurrent user work.

Authorized Scope Mismatch

- **P2A-11 Frozen commit attestation:** `P2A-11:JSON_FIELD_MISMATCH:freezeAttestation:status,`
`P2A-11:JSON_FIELD_MISMATCH:freezeAttestation:freezeVerified,`
`P2A-11:JSON_FIELD_MISMATCH:freezeAttestation:summary.contentMismatches,`
`P2A-11:JSON_FIELD_MISMATCH:freezeAttestation:summary.phase2aRuntimeDrift.`

These four assertions represent one stale freeze requirement.

Phase 2B Contract

1. Close R01-R08 with authentic evidence.
2. Produce R09: 207/207, zero drift, 37/37.
3. Obtain R10 independent GO.
4. Run `npm run agent:phase2b:entry:gate`; require 23/23.
5. Conduct a separate allowlisted activation ceremony.
6. Preserve kill switch, tenant scope, RBAC, fresh auth, audit, outbox, and no execution authority.

7. Run and certify the bounded pilot.

Phase 3: All 34 Failed Checks

The first 21 repeat Phase 2B prerequisites. The additional thirteen are:

- **PILOT_EXIT_STATUS_READY:** Pilot exit register is ready for Phase 3 review
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_RELEASE_BINDING:** Pilot exit evidence is bound to commit, artifact, and evidence bundle
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_SCOPE_AND_ACTIVATION_EVIDENCE:** Pilot has activation reference and hashed tenant/role scope
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_OBSERVATION_COMPLETE:** Pilot has a bounded completed observation window and successful runs
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_SAFETY_CLEAN:** Pilot records zero authority, tenant, execution, and secret violations
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_OPERATIONS_EVIDENCE:** Pilot monitoring, support, rollback, and incident evidence are complete
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_INCIDENTS_CLEAN:** Pilot has zero critical, high, and unresolved incidents
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_EXIT_APPROVALS:** Product, security, finance-domain, and release approvals are complete
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_APPROVER_SEGREGATION:** Pilot exit approvers are four distinct directory identities
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PILOT_PHASE3_RECOMMENDATION:** Pilot exit register recommends Phase 3 without self-authorizing it
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_2B_PILOT_EXIT_REGISTER_2026-07-25.json)
- **PHASE2B_PILOT_COMPLETED:** Promotion point 12 records completed Phase 2B pilot
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_3_PROMOTION_LEDGER_2026-07-25.json)
- **PHASE3_GO_APPROVED:** Promotion point 13 records approved Phase 3 GO
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_3_PROMOTION_LEDGER_2026-07-25.json)
- **PHASE3_AUTHORITY_RECORDED:** Authoritative promotion ledger records Phase 3 authority
(docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_PHASE_3_PROMOTION_LEDGER_2026-07-25.json)

Phase 3 eligibility does not grant authority. Initial Phase 3 remains read-and-draft. Direct Prisma writes, ledger posting, payment, payroll execution, filing, approval, reversal, certification, role/permission, and entitlement changes remain prohibited.

Human Intervention Workstreams

Workstream	Owners	Raw count	Command
Immutable release and protected CI evidence	ENGINEERING_RELEASE, QA, PLATFORM	29	<code>npm run agent:ci-release:evidence:apply</code>
Product/security approval and operational ownership	PRODUCT, SECURITY, RELEASE_MANAGER	62	<code>npm run agent:governance:evidence:apply</code>
Managed scheduler and inactive reconciler deployment	PLATFORM, SRE, SECURITY	39	<code>npm run agent:scheduler:evidence:apply</code>
Three consecutive reconciliation windows	SRE, RECONCILIATION_OWNER	20	<code>npm run agent:reconciler:evidence:apply</code>
Production-like alert lifecycle	SRE, SECURITY_INCIDENT, ON_CALL_BACKUP	17	<code>npm run agent:alert:evidence:apply</code>
Credential classification, rotation, and revocation	SECURITY, PLATFORM, WORKLOAD_OWNERS	31	<code>npm run agent:credential-rotation:evidence:apply && npm run agent:credential-rotation:gate</code>
Statutory authority and global release preflight	OHADA_DOMAIN_REVIEWER, DATABASE_OWNER, SECURITY, RELEASE_MANAGER	4	<code>npm run statutory:country-pack:gate && npm run prisma:migration:release:preflight && npm run release:secrets:preflight:release && npm run release:evidence:gate:release</code>

Workstream	Owners	Raw count	Command
Independent enterprise release decision	ENTERPRISE_RELEASE_AUTHORITY	1	<code>Rerun 017-aqstoqflow-enterprise-release-gate</code>
Controlled Phase 2B pilot and exit certification	PILOT, PRODUCT, SECURITY, FINANCE_DOMAIN, RELEASE	34	<code>npm run agent:phase3:entry:report</code>

Counts overlap by design: reconciler windows are a focused subset of scheduler codes.

Repository Work Executed

1. **Canonical B09 freeze contract:** `scripts/enterprise-release-blocker-status.js:289` now requires `FROZEN_COMMIT_VERIFIED`; a regression test rejects generic `READY`.
2. **Reliable phase-decision writes:** `scripts/agent-phase-promotion-gate.js:80` now retries transient evidence contention with bounded backoff. The initially failed Phase 3 write exposed this weakness; later Phase 2B and Phase 3 writes succeeded.
3. **Evidence regeneration:** migration, history, secrets, statutory, release index, freeze, audit, credentials, operations, Phase 2B, Phase 3, external input, human intervention, and B01-B12 reports were recomputed in order.

These fixes weaken no security, tenant, accounting, statutory, or authority control.

Ordered Roadmap

Tranche 1: External Prerequisites

Execute R01-R03. Database/secrets may run in parallel with qualified review. Never use local dbakesman as release evidence.

Tranche 2: Candidate And CI

Stabilize intended runtime paths, select one commit, build inactive artifact, run protected CI and enabled-pilot certification, bind every hash/reference.

Tranche 3: Credentials And Operations

Run R08, then R05-R07. Preparation may overlap, but final attestations bind to the exact candidate.

Tranche 4: Freeze And Enterprise Review

Produce R09, assemble one immutable bundle, and run R10. Record no GO unless independently approved.

Tranche 5: Phase 2B Pilot

Require 23/23, perform separate activation, run allowlisted pilot, observe operations, test rollback, obtain segregated exit approvals.

Tranche 6: Phase 3

Require 34/34 and separately recorded authority. Begin read-and-draft only.

Preventing Subsequent Blockers

- Use one immutable `releaseBinding` as the foreign key for all evidence.
- Capture signed query-free provider/OIDC attestations; never paste secrets into JSON.
- Automate expiry/recapture for approvals, heartbeat, readiness, and attestations.
- Use a clean release checkout separate from active development.

- Continuously validate owner, runbook, and coverage readiness.
- Rerun composition reports after each source gate; never edit ledgers to force green.
- Generate pilot exit from runtime evidence and distinct signed decisions.
- Invalidate promotion on commit, artifact, manifest, bundle, allowlist, or policy drift.
- Preserve tenant, period, as-of, sources, completed-run, TTL, RBAC, fresh-auth, and no-execution provenance.

Verification

Verification	Result
Skill 016	15/15 passed
Focused tests	20/20 passed direct serial Jest with open-handle detection
Scoped ESLint	Passed
Node syntax	Passed
Phase 2B writer	Succeeded; correctly blocked 2/23
Phase 3 writer	Succeeded; correctly blocked 0/34
Enterprise fail gate	Expected exit 1; blocked 2/12
TypeScript	Inconclusive: process terminated after about six minutes without diagnostic
Secrets/activation/Phase 3 authority	None printed/attempted/granted

The edits are JavaScript gate code and passed focused tests, syntax, and scoped lint. TypeScript is not labeled failed because no compiler diagnostic returned.

Architecture Evidence Note

`graphify-out/GRAPH_REPORT.md` was rebuilt 2026-06-14 with 4,121 nodes in 135 communities. It predates July agent-runtime work and has no searchable current runtime nodes. It is historical context, not release authority; current gate scripts and JSON control.

Formal Skill 017 Result

REJECTED / NO-GO. B01/B02 are ready. Production target, secrets, statutory authority, credentials, operations, freeze, governance, Phase 2B, and Phase 3 remain blocked. Activation and Phase 3 authority remain false.

Remain on `017-aqstoqflow-enterprise-release-gate` until R01-R10 close. The next execution target is Phase 2B entry, not Phase 3.
