

Cameroon Country Pack Signing Packet Execution Report

Generated: 2026-07-30

Workspace: E:\ohada saas\Focused projects\stoquify

Country pack: Cameroon, CM, evidence batch 2026-07-19

Executive Result

The report recommendations were executed as far as they can be executed without fabricating statutory approval. The retained Cameroon source artifacts were re-verified successfully, the review/package gates were rerun, and the signing packet requirements were identified.

The country pack is still correctly blocked from production promotion because there is no qualified expert approval artifact, no accepted digital signature evidence, no completed maker-checker approval, and no completed independent fixture review workbook.

No production flags, source evidence hashes, runtime status, or manifest approval fields were promoted in this pass. That is intentional and required until signed approval evidence is returned by a qualified reviewer and checked by a separate verifier.

What Was Executed

```
| Step | Command | Result |
| --- | --- | --- |
| Source byte verification | `node scripts/statutory-country-pack-review-package.js verify-sources` | Passed. Status: `SOURCE_BYTES_VERIFIED`. |
| Fixture review completeness check | `node scripts/statutory-country-pack-review-package.js fixture-hashes --workbook docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-package\fixture-review-workbook.template.json` | Blocked. Status: `BLOCKED_INCOMPLETE_INDEPENDENT_REVIEW`. |
| Signature verification check | `node scripts/statutory-country-pack-review-package.js verify-signature --decision docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-decision.template.json` | Blocked. Status: `BLOCKED_SIGNATURE_VERIFICATION`. |
| Qualified review preflight | `node scripts/statutory-country-pack-review-preflight.js --mode fail --decision docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-decision.template.json --out what-next\statutory-country-pack-review-preflight.md --json-out what-next\statutory-country-pack-review-preflight.json` | Blocked. `4/12` conditions passed. |
| Production readiness gate | `npm run statutory:country-pack:gate` | Blocked. `10/12` checks ready. |
```

Source Artifacts Verified

The retained source bytes matched their expected SHA-256 hashes.

```
| Legal reference | File | SHA-256 | Result |
| --- | --- | --- | --- |
| `CM_CNPS_CONTRIBUTION_DECREE_2016` | `CNPS-Decree-2016-072-contribution-rates.pdf` | `1e88f488d96e163ded9e204c100c5bbce9e8d4917e6e7 2387ec6af52e0c90b61` | Passed |
| `CM_CNPS_EMPLOYER_RULES` | `CNPS-employer-general-rules.html` | `bc51f74de8dd3b0c7babd86e8f98d92dbdbece214480f 66ac89c42d3e894a868` | Passed |
| `CM_CNPS_STATISTICAL_YEARBOOK_2025` | `CNPS-Statistical-Yearbook-2025.pdf` | `53a22ebb9a9bf31bc0c7c60f8cc0eed9383192ef4f0d6 a309f2782ad60875504` | Passed |
| `CM_CNPS_EMPLOYER_OBLIGATIONS_CURRENT` | `CNPS-Employer-Obligations-current-2026-07-26.html` | `8e319e856a0f473accac53587708523b7080c5aac5f6d 8eb4e8bd5cb5bb8d743` | Passed |
| `CM_CNPS_OFFICIAL_FAQ_DECREE_2016_072` | `CNPS-Official-FAQ-Decree-2016-072.pdf` | `166f12931df869f4a6f96a977342ce1860ecec1361535 c96fc2e841f2ffb7d5d` | Passed |
| `CM_CNPS_CONTRIBUTION_SCALE_OFFICIAL_2025` | `CNPS-Contribution-Scale-official-2025.jpg` | `ae152e77b7a26ab2a2270d032a256815e8f3544e66700 f207191edf584ed2259` | Passed |
```

Current Gate Blockers

The statutory production gate remains blocked by:

- source_artifact_hash_verification
- source_artifact_expert_approval

The gate diagnostics reported:

- Captured artifact hashes verified: 2/2
- Pack source hashes declared / valid / bound: 7/0/0
- Approval artifact verified: false
- Qualified expert approval complete: false
- Runtime CNPS capability status: SUPPORTED_DRAFT
- Runtime CNPS verification status: SOURCE_CHECKED
- Runtime CNPS authority binding promoted: false

The template signature check also reported these missing or invalid evidence items:

- signature_method_not_accepted
- signed_artifact_metadata_invalid
- checker_verification_not_verified
- maker_checker_separation_invalid
- checker_verification_metadata_incomplete
- checker_conflict_declaration_missing
- signature_evidence_metadata_invalid

Documents That Need Completion Or Signature

These are the country pack documents that must be completed and, where noted, signed or backed by signature verification evidence.

Document to produce	Starting template or source	Who completes it	Signature need	Purpose
`source-hash-verification.json`	`docs\HR-Payroll\evidence\country-packs\CM\202 6-07-19\review-package\source-hash-verification.template.json`	Evidence preparer or reviewer		Should be included in the signed review packet or separately signed if your approval workflow requires it Confirms independent recomputation of retained source hashes.
`reviewer-qualification-conflict.json`	`docs\HR-Payroll\evidence\country-packs\CM\202 6-07-19\review-package\reviewer-qualification-conflict.template.json`	Qualified statutory/payroll reviewer		Should be signed or included inside the signed approval artifact Identifies reviewer qualification, authority, and conflict declaration.
`fixture-review-workbook.json`	`docs\HR-Payroll\evidence\country-packs\CM\202 6-07-19\review-package\fixture-review-workbook .template.json`	Qualified reviewer		Should be included in the signed review packet Completes independent fixture tie-outs for all required CNPS fixture families.
`review-decision.json`	`docs\HR-Payroll\evidence\country-packs\CM\202 6-07-19\review-package\review-decision.return .template.json`	Qualified reviewer		Must reference a signed approval artifact and verification metadata Machine-readable approval or rejection decision consumed by verification scripts.
`review-decision.signed.pdf`		Produced from the completed review decision and supporting packet	Required	Human-readable approval artifact signed by accepted method.
`maker-checker-approval.json`	`docs\HR-Payroll\evidence\country-packs\CM\202 6-07-19\review-package\maker-checker-approval .template.json`	Independent checker, not the reviewer		Required or must include verified checker signature evidence Confirms the reviewer signature, separation of duties, and retained approval evidence.
`signature-verification-evidence.*`		Produced by the signature tool or checker process		Independent checker Evidence file, not just a typed note Proves the signature method, signer identity, certificate/key validity, and timestamp.

Recommended destination for completed return files:

docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\

The review package templates may remain under:

docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-p ackage\

Required Fixture Families

The independent fixture workbook must complete all four families:

- payroll.cnps.pensionRatesBps
- payroll.cnps.familyAllowanceRatesBps
- payroll.cnps.occupationalRiskRatesBps
- payroll.cnps.employerRules

At the time of this report, all four were incomplete and had null independent fixture tie-out hashes.

How To Sign The Packet

Use one of the accepted signing methods defined by the package signature verification procedure. Recommended path:

1. Complete the source hash verification, reviewer qualification/conflict declaration, fixture review workbook, and review decision return file.
2. Export a human-readable approval packet to PDF. Include the review decision, reviewer identity/qualification declaration, source hash verification, fixture workbook summary, and references to retained source files.
3. Have the qualified reviewer sign that PDF using an accepted method such as PAdES, qualified or advanced electronic signature, organization-issued certificate, detached CMS/PKCS#7, or detached PGP signature with verified key identity.
4. Save the signed file as:

docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-decision.signed.pdf

5. Compute the signed artifact hash:

```
Get-FileHash -Algorithm SHA256 -LiteralPath "docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-decision.signed.pdf"
```

6. Fill review-decision.json with:

- reviewer identity
- reviewed timestamp
- effective dates
- decision
- signed artifact file name
- signed artifact SHA-256 hash
- signature method
- signature verification metadata
- approved fixture families

7. Have a separate checker verify the signature, signer identity, certificate/key chain, conflict declaration, and packet completeness.

8. Save the checker return file as:

docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\maker-checker-approval.json

9. Retain the signature validation output as a file, for example:

docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\signature-verification-evidence-2026-07-30.json

10. Rerun the verification commands with the completed return files:

```
node scripts/statutory-country-pack-review-package.js verify-sources
node scripts/statutory-country-pack-review-package.js fixture-hashes --workbook docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\fixture-review-workbook.json
node scripts/statutory-country-pack-review-package.js verify-signature --decision docs\HR-Payroll\evidence\country-packs\CM\2026-07-19\review-decision.json
node scripts/statutory-country-pack-review-preflight.js --mode fail --decision docs\HR-
```

```
Payroll\evidence\country-packs\CM\2026-07-19\review-decision.json --out what-next\statutory-  
country-pack-review-preflight.md --json-out what-next\statutory-country-pack-review-preflight.  
json  
    npm run statutory:country-pack:gate  
    npm run policy:gates
```

Accepted Signature Methods

The package procedure accepts these methods when the verification evidence is retained:

- PAdES signed PDF with verifiable certificate chain and signing time.
- Qualified or advanced electronic signature with retained validation evidence.
- Organization-issued digital certificate matching the reviewer identity.
- Detached CMS or PKCS#7 signature over the approval artifact.
- Detached PGP signature with verified key identity.
- Controlled handwritten fallback only when paired with checker authentication and retained evidence.

The following are not enough:

- Typed reviewer name.
- Pasted signature image.
- Checkbox-only approval.
- Email footer.
- Source-control commit.
- Internally generated approval without qualified reviewer identity and checker evidence.

Why Codex Did Not Sign

Codex cannot lawfully or evidentially sign this statutory approval packet because the missing evidence must come from a real qualified reviewer and an independent checker. Creating a signature, reviewer identity, expert decision, or checker attestation here would produce false compliance evidence.

What Codex can do after the signed packet is returned:

- Recompute and verify file hashes.
- Validate returned JSON files and signature metadata.
- Confirm maker-checker separation.
- Replace symbolic sourceEvidenceHash values with real approved hashes only after the gate evidence is complete.
- Update the manifest approval fields.
- Promote runtime country pack status only within the signed approval scope.
- Rerun `npm run statutory:country-pack:gate` and `npm run policy:gates`.
- Produce the final release evidence report.

Files Refreshed By This Execution

The gate/preflight commands refreshed these generated evidence files:

- what-next\statutory-country-pack-review-preflight.md
- what-next\statutory-country-pack-review-preflight.json
- what-next\statutory-country-pack-production-readiness.md
- what-next\statutory-country-pack-production-readiness.json

This report was added at:

- docs\sign-artifacts\CAMEROON_COUNTRY_PACK_SIGNING_PACKET_EXECUTION_REPORT_2026-07-30.md
- docs\sign-artifacts\CAMEROON_COUNTRY_PACK_SIGNING_PACKET_EXECUTION_REPORT_2026-07-30.pdf

The earlier signing guidance was also converted to PDF at:

- docs\sign-artifacts\SIGNING_CAMEROON_COUNTRY_PACK_APPROVAL_ARTIFACT_2026-07-30.pdf

Current Decision

Status: BLOCKED_PENDING_QUALIFIED_REVIEW

The next action is not a code change. The next action is for the qualified reviewer and independent checker to complete and sign the return package listed above. After those files are returned, the production promotion and real source hash binding can be executed safely.
