

Stoquify Agent Runtime Credential Rotation Register

Register: stoquify-agent-runtime-credential-response-2026-07-25

Incident scope: unsafe-local-browser-report-environment-scope

Gate status: BLOCKED

Current blockers: 31

Credential classes: 15

Secret values printed or retained: No

Authority source: unresolved

Authority attested: unresolved

Release binding: unresolved / unresolved

This register records credential classes and evidence references only. It must never contain a credential value, token, password, authorization header, database URL, or environment snapshot.

Required Evidence Per Rotated Credential

- Secret-manager reference
- Rotation owner directory identity
- Rotation start timestamp
- New-version activation timestamp
- Dependent workload restart timestamp
- New-version verification timestamp
- Old-version revocation timestamp
- Old-version rejection timestamp
- Evidence reference
- Security approval reference
- Security review timestamp

A `TEST_ONLY_CONFIRMED` or `NOT_PRESENT_CONFIRMED` disposition still requires a real security owner, review timestamp, evidence reference, and security approval reference.
