

Stoquify Agent Runtime Phase 2A Freeze Commit Attestation

Evaluated: 2026-07-25T13:37:56.505Z

Status: FROZEN_COMMIT_VERIFIED

Freeze verified: Yes

Clean release ready: No

Activation authorized: No

Phase 3 authorized: No

Post-Freeze Worktree

Classification	Count
Current changes	86

Classification	Count
Evidence/control remediation	67
Phase 2A runtime drift	0
Outside candidate scope	19

The frozen commit can be verified independently of the current dirty worktree. A dirty worktree still blocks clean release and CI evidence.

Blockers

- None for promotion point 1 commit attestation.

Safety

- The historical candidate manifest is not rewritten.
- Working-tree byte hashes are accepted only through an exact committed blob, a deterministic line-ending equivalent, or an unchanged checkout whose Git clean filter maps to the committed blob.
- Post-freeze Phase 2A runtime drift blocks this attestation; evidence-only and unrelated worktree changes remain visible.
- This attestation does not prove protected CI, deploy an artifact, activate an agent, or authorize Phase 3.
