

# Stoquify Agent Runtime Phase 3 Promotion Ledger

**Date:** 2026-07-25 **Current phase:** Phase 2A release preparation **Overall status:** BLOCKED **Activation authorized:** No **Phase 3 authorized:** No

## Purpose

This ledger is the authoritative execution map from the inactive Phase 2A Command Agent through a controlled Phase 2B pilot and into an explicitly authorized Phase 3 Cash/Reconciliation Agent. It does not create approvals, name owners, activate a package, or authorize Phase 3.

## Freeze Baseline

| Field                              | Current value                            |
|------------------------------------|------------------------------------------|
| Branch                             | codex/service-boundary-burndown          |
| Frozen HEAD                        | 85eb50ef792908ae1e3ecbe7bd34b6054c79cf52 |
| Frozen parent                      | ac30ee75314a0a2a2fcd6bd2ed65afb280aa0d5e |
| Frozen commit attestation          | FROZEN_COMMIT_VERIFIED                   |
| Manifest files verified            | 207/207                                  |
| Missing or unexpected commit paths | 0                                        |
| Content mismatches                 | 0                                        |
| Post-freeze Phase 2A runtime drift | 0                                        |
| Current source tree clean          | No                                       |
| Current changed entries            | 94                                       |
| Current tracked changes            | 53                                       |
| Current untracked entries / files  | 33 / 41                                  |
| Evidence/control changes           | 75                                       |
| Changes outside candidate scope    | 19                                       |
| Clean release ready                | No                                       |
| Activation / Phase 3               | No / No                                  |

The exact freeze result is recorded in `STOQUIFY_AGENT_RUNTIME_PHASE_2A_FREEZE_COMMIT_ATTESTATION_2026-07-25.json`. It independently verifies the historical candidate manifest against the committed path set and committed content. The current dirty worktree is visible but is not treated as the frozen release source.

## Verification Snapshot

| Check                         | Result                                                   |
|-------------------------------|----------------------------------------------------------|
| Agent runtime gates           | Passed                                                   |
| Phase 2A static gate          | Passed                                                   |
| Phase 2A frozen-commit gate   | FROZEN_COMMIT_VERIFIED                                   |
| Authorized-scope requirements | 37/37 passed; 0 repository blockers; 6 external blockers |

| Check                              | Result                                                           |
|------------------------------------|------------------------------------------------------------------|
| TypeScript                         | Passed                                                           |
| Prisma schema                      | Valid                                                            |
| Service-boundary active violations | 0                                                                |
| Raw-error active findings          | 0                                                                |
| Lint                               | 0 errors; 4 pre-existing warnings                                |
| Full Jest                          | 477 suites and 2,886 tests passed; 3 suites and 15 tests skipped |
| Focused agent and release bundle   | 26 suites and 131 tests passed                                   |
| Global release structure           | 11/11 checks passed                                              |
| Global release blockers            | 6                                                                |
| Operational release                | Blocked, 152 blockers                                            |
| Credential rotation                | Blocked, 31 blockers across 15 classes                           |
| Phase 2B entry                     | Blocked, 19 of 23 checks                                         |
| Phase 3 entry                      | Blocked, 32 of 34 checks                                         |
| Enterprise release decision        | REJECTED / NO-GO                                                 |

The full Jest run emitted the known forced-worker-exit warning after every executed test passed. The current focused agent and release bundle passed 26 suites and 131 tests.

## Freeze Candidate Manifest

| Category                       | Files |
|--------------------------------|-------|
| Runtime source and tests       | 117   |
| Release evidence documents     | 90    |
| Total                          | 207   |
| Duplicate paths                | 0     |
| Verified against frozen commit | 207   |

Committed-content verification used 175 exact blob matches, 5 deterministic line-ending equivalents, and 27 unchanged-checkout Git clean-filter equivalents. No file was accepted from a changed Phase 2A runtime path.

## Freeze Rule

No additional Phase 2A product capability may be added. Changes are limited to verification, release-evidence remediation, and defects that prevent the controlled pilot. The historical manifest is not rewritten. The frozen commit does not by itself prove protected CI, deployment, or activation readiness.

## Fourteen-Point Promotion Sequence

| # | Promotion point                       | Status                              | Evidence needed next                                                                                                     |
|---|---------------------------------------|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 1 | Freeze Phase 2A functionality         | Repository verified; review pending | Independent review and acceptance of the commit attestation                                                              |
| 2 | Produce clean release and CI evidence | Blocked                             | Clean reviewed release state, protected CI, immutable artifact, browser certificate, deployment and external attestation |

| #  | Promotion point                           | Status          | Evidence needed next                                                                              |
|----|-------------------------------------------|-----------------|---------------------------------------------------------------------------------------------------|
| 3  | Record product and security approvals     | Blocked         | Distinct real approvers bound to the frozen release bundle                                        |
| 4  | Assign six operational owner roles        | Blocked         | Primary, backup, runbook, coverage, and escalation evidence for every role                        |
| 5  | Deploy reconciler and scheduler authority | Blocked         | Managed five-minute schedule and independent deployment attestation                               |
| 6  | Configure managed evidence credentials    | Blocked         | Query-free HTTPS endpoints and managed secret references                                          |
| 7  | Capture three reconciler windows          | Blocked         | Three unique completed five-minute windows, readiness, heartbeat, and invalid-auth proof          |
| 8  | Deploy and test alerting                  | Blocked         | Delivery, acknowledgement, retry, dead letter, recovery, escalation, and rotation proof           |
| 9  | Complete credential rotation              | Blocked         | Fifteen classes rotated, verified, revoked, rejected, and approved                                |
| 10 | Close statutory evidence                  | Blocked         | Source artifact hash verification and qualified expert approval                                   |
| 11 | Rerun enterprise gate 017                 | Executed, no-go | Rerun after points 1 through 10 pass                                                              |
| 12 | Conduct controlled Phase 2B pilot         | Not started     | Separate activation decision, bounded pilot, monitoring, rollback, support, and incident evidence |
| 13 | Record explicit Phase 3 GO                | Not started     | Product, security, finance-domain, and release acceptance of pilot exit evidence                  |
| 14 | Begin Phase 3                             | Not started     | Read-and-draft implementation only after point 13                                                 |

## Requested Gate Rerun

```
npm run agent:reconciler:evidence:apply
npm run agent:credential-rotation:gate
npm run agent:operational-release:gate
```

Results:

- Reconciler apply: failed closed on RECONCILER\_BASE\_URL\_MISSING; no register mutation and no secret output.
- Credential rotation: BLOCKED, 15 classes and 31 blockers.
- Operational release: BLOCKED, 152 blockers, ready for independent review false, activation false.
- Skill 017: REJECTED / NO-GO.
- Phase 2B entry: BLOCKED, 19 of 23 checks.
- Phase 3 entry: BLOCKED, 32 of 34 checks.
- Activation and Phase 3 authority: No / No.

## Command Order

After the corresponding real-world evidence exists:

```
npm run agent:ci-release:evidence:apply
npm run agent:governance:evidence:apply
npm run agent:scheduler:evidence:apply
```

```
npm run agent:reconciler:evidence:apply
npm run agent:alert:evidence:apply
npm run agent:credential-rotation:evidence:apply
npm run agent:credential-rotation:gate
npm run statutory:country-pack:gate
npm run release:evidence:gate:release
npm run agent:phase2a:freeze:gate
npm run agent:operational-release:gate
```

Then rerun 017-aqstoqflow-enterprise-release-gate. A passing operational gate means eligible for independent review only. It does not activate the package.

## Permanent Boundaries

- No direct agent Prisma business writes.
- No direct ledger posting, payment, statutory filing, payroll mutation, stock mutation, close certification, or access change.
- No self-approval, self-activation, or self-promotion.
- Activation remains a protected ceremony after an independent release GO.
- Phase 3 begins in read-and-draft mode and cannot execute its drafts.

## Current Decision

The Phase 2A frozen commit and all 37 repository-owned requirements are verified. The current worktree is not a clean release artifact, the Phase 2B entry gate has 19 blockers, the Phase 3 entry gate has 32 blockers, and the high-authority operational evidence remains incomplete. Continue with independent freeze review and promotion point 2. Do not activate Phase 2A, start the Phase 2B pilot, or implement Phase 3.
