Platform evaluation — complete publication index

Published 24 September 2026 using docs-report-publisher.

This index brings together the reports and execution prompts from the public-page and POS work in this conversation, alongside the material already present in this archive. Each listed document has a matching Markdown source and PDF reading copy.

Existing report and prompt contents and filenames are preserved. Two plain-text execution briefs are copied into Markdown without changing their bytes. The workflow scope amendment is separately attributed to the user's follow-up request. Historical findings retain their original dates and limitations; publication does not rerun verification or approve a release.

Start here

- Public pages: implementation report · PDF.
- POS modernization: implementation summary · PDF.
- Latest POS release gate review: outcome · PDF.
- Earlier platform evaluation: original index · PDF.

Preservation and evidence

Locally linked JSON, log, text and image evidence within the selected report runs is included unchanged. Source-code baselines and prior repository reports remain in their original locations. The Source column opens each original document with its repository-relative link context. Those links are intentionally not rewritten in the archival copies.

Publication manifest records file provenance, SHA-256 hashes, supporting evidence and publication verification. This index also has a PDF copy.

Total: 74 Markdown/PDF pairs, including this index.
