Public page workflow scope amendment

Source: the user's follow-up request in this conversation. Read alongside execution-brief.md; this amendment expands its original three-page scope. The request below is preserved as supplied, with typographic formatting normalized.

The prompt's scope now covers **landing, workflow (`/workflows`), login, and registration pages**.

The **workflow page** should provide the deeper educational experience: explain each important business journey, who performs each step, how information passes between modules, where approvals occur, and what outcomes result. Include accessible exploration by role or business objective, clear prerequisites, and links from the other three pages.

Apply the same visual quality, English/French localization, evidence standards, responsive design, and accessibility requirements across all four pages. Expand verification to cover **all eight localized routes**. run
