Reviewer coverage and limits

These are engineering review perspectives, not separate professional sign-offs. Whole-program scope remains incomplete. “Retained” is an implementation decision, not a certification.

Reviewer responsibility	Evidence-backed finding / disposition
Enterprise/platform architecture	Existing modular-monolith ownership is supported by current action/service paths and the September modularity report. Eight import SCCs need type/runtime classification before changing boundaries.
Backend/domain/integration engineering	Cash history action retains RBAC/module checks; the service retains read and redaction authority. Repeated pure preflight presentation wrappers are consolidated without changing activation semantics.
Database/migration architecture	Cash and payment amounts are Decimal(14,2); grouped sums preserve that precision and bounded summary transport. No schema migration; actual query-plan validation outstanding.
Application security/IAM/privacy/abuse	Seven cache/permission/filter/export cases failed before changes. Identity and permission scope now participate in the cache key, and server-returned identity is checked. This is not a global security audit.
Frontend/design systems	Existing history shell and route contract retained; no new UI framework or duplicated component system.
Workflow UX/accessibility/localization	Existing translated state panels are used; selection avoids a loading transition; unauthorized export is hidden. Component evidence does not replace keyboard/screen-reader/browser testing.
Product/business processes	The same history, filtering, detail and export-preparation jobs remain. No features or customer capabilities were removed to improve size metrics. Full product inventory outstanding.
Quality/release assurance	Characterization failures saved; 996 preflight baseline tests and 5,610 serialized contract comparisons establish focused evidence. Full release validation remains a separate requirement.
SRE/DevSecOps/performance	Synthetic 200,000-row summary workload now returns 49 groups at unchanged query count. Mocked processing and heap deltas recorded; live latency, capacity, and operating-cost conclusions are unproven.
SaaS packaging/billing/growth/customer operations	Both cash_drawer and payment_reconciliation module decisions remain server-enforced. Packaging, billing providers, and growth workflows were retained and not revalidated.
Finance/accounting/treasury/reconciliation/controls	Decimal totals, physical-cash/electronic-tender separation, provider redaction, and event counts are protected by focused tests and differential summary comparison. Broader ledger/reconciliation invariants remain outside verified changes.
OHADA/SYSCOHADA/statutory/country packs	No rule, rate, jurisdictional configuration, or provenance changed. Legal/statutory conclusions are not applicable to these implementation changes; country-pack rewrite remains unperformed.
Audit/records/data quality	Source hashes and logs distinguish baseline from changes. Retained preflight serialized outputs and fingerprints compare identically; no evidence history was deleted.
POS/inventory/offline consistency	Cash history reads changed; POS posting, stock valuation, offline replay, and synchronization writers retained. Their end-to-end rewrite/validation remains outstanding.
Purchasing/AP/payment controls	Purchasing/AP owners retained; cash history does not gain a mutation path. Maker-checker and AP concurrency are not certified by these tests.
HRIS/payroll/employee privacy	Payroll's 10,974-line control service is an inventory priority, not an authorized deletion candidate. Payroll behavior and privacy controls retained; deeper review pending.

Reviewer responsibility	Evidence-backed finding / disposition
Payments/mobile money/settlement	Existing provider-reference redaction and electronic-tender summary formulas preserved. No provider requests, settlement changes, or money movement performed.
Accounting close/fiscal reporting/accountant portal	Existing source owners retained. The inventory identifies an accounting/inventory import SCC; this is not evidence that transaction or close boundaries can be removed.
Analytics/metric governance	Existing cash summary definitions retained and exact values compared. No new cross-currency aggregate or alternate canonical KPI owner introduced.
AI/agent safety	No model, agent tool, approval, prompt-injection boundary, or runtime credential changes. AI-specific evaluation is not applicable to these edits; global agent review remains outstanding.
API/webhook/outbox/import/export boundaries	Existing action exports and preflight exports retained. History gains additive scope metadata; export preparation retains server fresh-auth/safety checks. Webhook/outbox behavior unchanged and unverified globally.
Change management/documentation/support/rollout	Local before/after evidence and a dependency-ordered continuation plan are saved. No rollout, production activation, support communication, or deployment was performed.
