

Compliance Authorization pages 6–7: G1 role-completeness review

Pages 6–7 completeness assessment, 33-obligation mapping, and controlled signing procedure

COMPLIANCE AUTHORIZATION ROLE REVIEW

Prepared 2026-08-19

Evidence-bound | approval-gated | fail-closed

No production claim without authentic evidence.

Review date: 2026-08-19 **Source reviewed:** docs/Compliance/Compliance authorization validation.docx **Source SHA-256:** d0c77c8d729f8fa4f44e4a13f316202a0e7d6c429d2fd2454a36ba0bd79b18fc **Frozen G1 contract SHA-256:** 11434eb3e1af1826516426e90d2d53a2faa47ade361d91191b5f3e0c950a36db

Executive result

Pages 6–7 of the source document mention **all 17 distinct G1 role types**, and their stated obligation counts add up to the required **33 decision-role obligations**. They are therefore a useful role summary, but they are **not a complete or valid G1 approval register**.

The source pages do not provide 33 separately traceable approval rows. The first five role entries are also malformed or missing their normal columns. No row contains enough authenticated authority, signing, artifact-binding and independent-verification evidence to receive G1 approval credit. The current approval result therefore remains **0/11 decisions and 0/33 obligations** until real authorized people complete the controlled process.

The original DOCX was not modified. A separate fillable completion copy was produced.

Role inventory verified against the 33-obligation register

Product owner	4
Financial controller	5
Payments owner	2
Retail operations owner	5
POS architect	1
Security owner	2
Treasury owner	2
Risk owner	2
QA owner	1
Support owner	2
Qualified Cameroon country-pack reviewer	1
SRE owner	1
Order-to-cash product owner	1
Qualified accounting reviewer	1
Inventory controller	1
Fulfillment owner	1
Accounting owner	1
Total	33

Complete decision-to-role mapping

D-01	Product owner	Financial controller	Payments owner
D-02	Retail operations owner	POS architect	Security owner
D-03	Payments owner	Treasury owner	Security owner
D-04	Product owner	Risk owner	Retail operations owner
D-05	Retail operations owner	QA owner	Support owner
D-06	Financial controller	Retail operations owner	Risk owner
D-07	Product owner	Financial controller	Qualified Cameroon country-pack reviewer
D-08	SRE owner	Product owner	Support owner
D-09	Financial controller	Order-to-cash product owner	Qualified accounting reviewer
D-10	Inventory controller	Fulfillment owner	Accounting owner
D-11	Financial controller	Treasury owner	Retail operations owner

Defects in the source pages 6–7

- 1 Product owner, Financial controller, Payments owner, Retail operations owner and POS architect are malformed fragments rather than complete table rows.
- 2 The pages summarize 17 role types but do not identify each of the 33 decision-role obligations separately.
- 3 Accountable legal names and immutable subject identifiers are absent or unverified.
- 4 Dated authority appointments, effective scope, tenant/organization and delegation records are absent.
- 5 Segregation-of-duties and conflict-of-interest results are absent.
- 6 The exact decision, selected option, artifact version, repository path and complete contract hash are not bound to each approval.
- 7 Fresh-authentication method, MFA result, trusted authentication time and trusted approval time are absent.
- 8 Controlled envelope/signature references, immutable evidence paths and evidence SHA-256 values are absent.
- 9 Independent verifier identity, authority, verification time, recomputed hash and result are absent.
- 10 Typed names or signature images elsewhere in the source remain documentary-only; they were not promoted to G1 approvers or approval evidence.

What the completion copy adds

The new pages 6–7 are deliberately organized as follows:

- 1 **Page 6:** all 17 canonical roles, their obligation counts and fillable authority-verification fields.
- 1 **Page 7:** all 33 obligation IDs mapped to D-01 through D-11 and their exact roles.
- 1 **Following pages:** one approval-and-evidence sheet for each decision, including contract binding, authority assignment, fresh authentication, signature reference, evidence hash and independent-verification fields.
- 1 **Final page:** the required filling and signing procedure plus a packet-level governance attestation.

Required filling and signing procedure

- 1 An authoritative HR, security, governance or corporate-secretary owner fills the page-6 roster from controlled records. Do not infer authority from a display name or ordinary application role.
- 2 Copy only verified people into the 33 page-7 obligation rows. Multiple rows may use one person only when every exact appointment is proven and the approved segregation-of-duties policy permits it.
- 3 Prepare the controlled approval envelope. It must show the decision ID, selected option, artifact ID/version/path, complete frozen contract hash, exact role, evidence, affected capabilities and rollback policy.
- 4 The real signer reviews the decision and freshly authenticates through the organization-controlled workflow, preferably using MFA.
- 5 The signer deliberately approves or rejects within ten minutes of fresh authentication. Trusted system clocks—not handwritten times—must record both events.
- 6 Export the final immutable approval artifact and audit trail. Record its resolvable envelope/signature reference and evidence location.
- 7 Compute lowercase SHA-256 over the exact exported bytes.
- 8 A different authorized verifier resolves the identity, appointment and signature references; confirms tenant, scope, dates, qualifications and segregation of duties; and independently recomputes the contract and evidence hashes.
- 9 Populate the live G1 approval register only after every required field passes. A decision receives credit only after all three of its role obligations pass.
- 10 Run the two narrow G1 checks only after authentic evidence is complete. G1 passes only when the actual validator reports 11/11 approved decisions.

Produced artifacts

- 1 docs/blockers-and-gates/COMPLIANCE_AUTHORIZATION_VALIDATION_G1_COMPLETION_FORM_2026-08-19.docx
- 1 docs/blockers-and-gates/COMPLIANCE_AUTHORIZATION_VALIDATION_G1_COMPLETION_FORM_2026-08-19.pdf

The completion form contains blank preparation fields; it is not itself approval evidence and does not claim legal enforceability or production authorization.
