

Stoquify G1/G2 current-state reassessment - 2026-08-20

G1/G2 technical, authority, approval, evidence and dependency truth

CURRENT-STATE REASSESSMENT

Prepared 2026-08-20

Evidence-bound | approval-gated | fail-closed

No production claim without authentic evidence.

Generated: 2026-08-20T14:46:52.784138Z

Classification: **ASSESSMENT ONLY - NOT PRODUCTION, LEGAL, ACCOUNTING, SECURITY OR REGULATORY CERTIFICATION**

Executive state of affairs

- 1 **G1 technical contract: 13/13 PASS_CURRENT.** The former cash-only UI mismatch is resolved; the current UI and runtime conform to the frozen cash-only/store-credit-disabled development scope.
- 1 **G1 decisions: 0/11 approved.** Every D-01 through D-11 decision still lacks validator-acceptable, authority-backed human approvals.
- 1 **G1 role obligations: 0/33 accepted** across **17 canonical roles**. Status distribution: {'OPEN_AUTHORITY_EVIDENCE': 31, 'OPEN_EXTERNAL_EVIDENCE': 2}.
- 1 **Enterprise POS gate sequence: 0/10 passed;** the canonical program validator reports **G1 as the first blocker**.
- 1 **G2:** not eligible to pass because G1 is open, and it also has intrinsic work remaining. Across 18 controls: {'PASS_WITH_LIMITATIONS': 4, 'OPEN_TECHNICAL': 12, 'OPEN_EXTERNAL_EVIDENCE': 1, 'PASS_CURRENT': 1}.
- 1 **Release recommendation: NO-GO.** Continue development-only preflight; do not claim G1, G2 or production readiness.

The core distinction is simple: the engineering blueprint now passes its 13 technical checks, but no authorized human has yet accepted the 11 decisions in the form the validator requires. G2 is the next engineering/control layer; useful portions work locally, but it cannot pass today even if G1 were magically approved because independent cart-integrity, access, privacy and production-secret blockers remain.

Plain-language explanation

Think of G1 as the approved rulebook and G2 as the lock-and-safety system built from that rulebook. Engineers have made the rulebook internally consistent. The organization must still prove who is allowed to approve each rule, capture their deliberate approval after fresh login/MFA, and preserve evidence another person can verify. Test users, job titles, typed names and pictures of signatures do not prove this.

The HRIS reseed is useful for development: it now provides role, employee, contract, org-unit, position and assignment coverage. It is explicitly synthetic. It helps test workflows but gives **zero governance or approval credit**.

Canonical definitions and validators

- 1 G1 contract: docs/pos-enterprise-grade-audit/EXECUTION_06_G1_CONTRACT_FREEZE_V0_2_0.json, version 0.2.0, SHA-256 11434eb3e1af1826516426e90d2d53a2faa47ade361d91191b5f3e0c950a36db.
- 1 Live approval register: docs/pos-enterprise-grade-audit/EXECUTION_06_G1_CONTRACT_APPROVAL_REGISTER.json, SHA-256 49e19d9ed6c83df23010264ffff4bb92dbe63ba4c2e7a8e3acdc42c0e4fe8340, current status OPEN_NO_APPROVALS.
- 1 G1 no-write command: `npm run pos:g1:contract:gate -> scripts/pos-g1-contract-gate.js`.
- 1 G2/program sources: docs/pos-enterprise-grade-audit/EXECUTION_07_G2_G9_GATE_STATUS.json and docs/pos-enterprise-grade-audit/EXECUTION_07_G2_G9_GATE_CLOSURE_PROGRAM.json.
- 1 Enterprise no-write command: `npm run pos:enterprise:program:gate -> scripts/pos-enterprise-program-gate.js`.
- 1 Canonical dependency: **G1 -> G2**. G2 preflight may proceed, but G2 cannot be declared passed until G1 passes.

As-of baseline and hash reconciliation

- 1 Commit: 35b4cc6a06a50ee11de5bfce6b04993e38bd589a.
- 1 Branch: codex/service-boundary-burndown.
- 1 Worktree: **dirty**. Relevant modified/untracked source includes POS actions/services/components/tests, package.json, prisma/schema.prisma, seed files, POS migrations, gate scripts and both evidence directories.
- 1 The G1 and G2 canonical manifests match their current listed bytes.
- 1 The canonical gate scripts and evidence bundles are currently **untracked**, so the commit alone cannot reproduce this assessment.

prisma/schema.prisma	prior rolling bundles differ	3a6f74890ef0e76a31f7a36aeaa73fdd30116ab4a3b0d58bb22f8f7adc41a15c	CURRENT DRIFT FROM HISTORICAL BUNDLES

The approval register's source assessment refers to docs/Compliance/Compliance authorization validation.docx at historical SHA-256 cdca6c7d...; that path does not currently resolve. A different untracked working DOCX exists under docs/blockers-and-gates/ and was open/locked during hashing. It receives **zero approval credit** and is classified **INCONSISTENT_EVIDENCE** until an immutable export is closed, hashed and independently bound to verified signers and decisions.

G1 scorecard

Technical checks	13	13	PASS_CURRENT
Decisions accepted	0	11	OPEN_AUTHORITY_EVIDENCE
Decision-role obligations accepted	0	33	OPEN_AUTHORITY_EVIDENCE / OPEN_EXTERNAL_EVIDENCE
Canonical roles with verified authoritative subjects	0	17	OPEN_AUTHORITY_EVIDENCE
Overall G1	blocked	passed	Canonical validator exit 1

All 13 G1 technical checks

G1-T01	canonical_g1_numbering	PASS_CURRENT	Canonical gate numbering is unambiguous
G1-T02	decision_set_d01_through_d11	PASS_CURRENT	Decision set is exactly D-01 through D-11
G1-T03	decisions_have_selected_fail_closed_options	PASS_CURRENT	Every decision has a selected fail-closed option
G1-T04	limited_development_scope_is_fail_closed	PASS_CURRENT	Development scope is explicitly limited and fail-closed
G1-T05	state_machine_catalog_complete	PASS_CURRENT	Required state-machine catalogue exists
G1-T06	runtime_mappings_and_gaps_are_explicit	PASS_CURRENT	Runtime mappings and known gaps are explicit
G1-T07	accounting_inventory_event_catalog_complete	PASS_CURRENT	Accounting and inventory event catalogue exists
G1-T08	single_sale_finalizer_preserved	PASS_CURRENT	Single authoritative sale finalizer is preserved
G1-T09	cash_only_and_store_credit_runtime_control	PASS_CURRENT	Cash-only UI and runtime control match the frozen scope
G1-T10	refund_void_fresh_auth_and_compensation_contract	PASS_CURRENT	Refund/void controls require fresh authentication and compensation
G1-T11	stock_and_cogs_event_ownership	PASS_CURRENT	Stock and COGS event ownership is explicit
G1-T12	contract_candidate_disclaims_approval	PASS_CURRENT	Technical contract does not claim human approval
G1-T13	detached_approval_register_binds_exact_contract_hash	PASS_CURRENT	Detached register binds the exact contract hash

`runtimeConformance` remains `PARTIAL_WITH_EXPLICIT_GAPS`. A technical-check pass means the frozen contract honestly describes those gaps and fails closed; it does not claim all target state machines or production features are implemented.

D-01 through D-11

D-01	Store-credit tender disposition	ENFORCED_DEVELOPMENT_SCOPE	Product owner, Financial controller, Payments owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-01.
D-02	Physical terminal/register and drawer session boundary	PARTIALLY_ENFORCED	Retail operations owner, POS architect, Security owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-02.
D-03	First electronic payment provider	DISABLED_CURRENT_SCOPE	Payments owner, Treasury owner, Security owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-03.
D-04	Offline tender policy	DISABLED_CURRENT_SCOPE	Product owner, Risk owner, Retail operations owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-04.
D-05	Browser, terminal and peripheral support matrix	DEVELOPMENT_MATRIX_DECLARED_NOT_PHYSICALLY_CERTIFIED	Retail operations owner, QA owner, Support owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-05.
D-06	Returns, voids and refunds policy	FRESH_AUTH_AND_COMPENSATING_EVENTS_PRESENT_PARTIAL_RETURN_AND_MAKER_CHECKER_MISSING	Financial controller, Retail operations owner, Risk owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-06.
D-07	Pilot country, currency, language and fiscal profile	DEVELOPMENT_ONLINE_COUNTRY_PACK_FAILS_CLOSED_FOR_PRODUCTION	Product owner, Financial controller, Qualified Cameroon country-pack reviewer	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-07.
D-08	Pilot service levels and error budgets	TARGET_CONTRACT_NOT_BASELINED	SRE owner, Product owner, Support owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-08.
D-09	Delivery invoice recognition event	NOT_IMPLEMENTED_AS_DELIVERY_ORDER_C_AGGREGATES	Financial controller, Order-to-cash product owner, Qualified accounting reviewer	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-09.
D-10	Reservation, availability and goods-issue policy	IMMEDIATE_POS_GOODS_ISSUE_PRESENT_DELIVERYReservationAggregateNotImplemented	Inventory controller, Fulfillment owner, Accounting owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-10.
D-11	Business-day, statement, reconciliation and accounting-close boundary	SESSION_STATEMENT_RECONCILIATION_AND_ACCOUNTING_PERIOD_PRESENT_BUSINESS_DAY_AGGREGATE_MISSING	Financial controller, Treasury owner, Retail operations owner	OPEN_AUTHORITY_EVIDENCE	0/3 required role approvals are validator-acceptable for D-11.

All 33 decision-role obligations

G1-D01-01	D-01	Product owner	OPEN_AUTHORITY_EVIDENCE	No verified Product owner or authentic approval evidence.	Confirm the real Product owner by stable subject ID and exact authority; obtain fresh-authenticated artifact-bound approval; export, hash and independently verify the evidence.
G1-D01-02	D-01	Financial controller	OPEN_AUTHORITY_EVIDENCE	No verified Financial controller or authentic approval evidence.	Confirm exact finance authority; approve the liability and accounting boundary after fresh authentication; export, hash and independently verify the evidence.
G1-D01-03	D-01	Payments owner	OPEN_AUTHORITY_EVIDENCE	No verified Payments owner or authentic approval evidence.	Confirm payments authority; approve cash-only/store-credit rejection after fresh authentication; export, hash and independently verify the evidence.
G1-D02-01	D-02	Retail operations owner	OPEN_AUTHORITY_EVIDENCE	No verified Retail operations owner or authentic approval evidence.	Confirm retail operations authority and approve the terminal/session/drawer operating boundary with its stated limitation.
G1-D02-02	D-02	POS architect	OPEN_AUTHORITY_EVIDENCE	No verified POS architect or authentic approval evidence.	Confirm architecture authority and approve the CAS/session/drawer invariant and documented gap after evidence review.
G1-D02-03	D-02	Security owner	OPEN_AUTHORITY_EVIDENCE	No verified Security owner or authentic approval evidence.	Confirm security authority and approve tenant/session ownership, race and recovery controls with the documented gap.
G1-D03-01	D-03	Payments owner	OPEN_AUTHORITY_EVIDENCE	No verified Payments owner or authentic approval evidence.	Confirm payments authority and approve continued electronic-tender disablement until a governed provider exists.
G1-D03-02	D-03	Treasury owner	OPEN_AUTHORITY_EVIDENCE	No verified Treasury owner or authentic approval evidence.	Confirm treasury authority and approve the provider/settlement fail-closed boundary.

G1-D03-03	D-03	Security owner	OPEN_AUTHORITY_EVIDENCE	No verified Security owner or authentic approval evidence.	Confirm security authority and approve continued disablement until provider security, credential and kill-switch controls exist.
G1-D04-01	D-04	Product owner	OPEN_AUTHORITY_EVIDENCE	No verified Product owner or authentic approval evidence.	Confirm product authority and approve continued offline-capture disablement after reviewing replay gaps.
G1-D04-02	D-04	Risk owner	OPEN_AUTHORITY_EVIDENCE	No verified Risk owner or authentic approval evidence.	Confirm risk authority and accept the fail-closed offline policy and residual limitations.
G1-D04-03	D-04	Retail operations owner	OPEN_AUTHORITY_EVIDENCE	No verified Retail operations owner or authentic approval evidence.	Confirm operations authority and approve the online-only operating procedure and recovery route.
G1-D05-01	D-05	Retail operations owner	OPEN_AUTHORITY_EVIDENCE	No verified Retail operations owner or authentic approval evidence.	Confirm operations authority and approve the explicit development-only hardware exclusion.
G1-D05-02	D-05	QA owner	OPEN_AUTHORITY_EVIDENCE	No verified QA owner or authentic approval evidence.	Confirm QA authority, verify the stated matrix evidence and approve only the development claim.
G1-D05-03	D-05	Support owner	OPEN_AUTHORITY_EVIDENCE	No verified Support owner or authentic approval evidence.	Confirm support authority and approve the supportability exclusions and recovery communication.
G1-D06-01	D-06	Financial controller	OPEN_AUTHORITY_EVIDENCE	No verified Financial controller or authentic approval evidence.	Confirm finance authority and approve the compensating accounting boundary and declared limitations.
G1-D06-02	D-06	Retail operations owner	OPEN_AUTHORITY_EVIDENCE	No verified Retail operations owner or authentic approval evidence.	Confirm operations authority and approve full-sale-only correction procedures and escalation for unsupported partial returns.
G1-D06-03	D-06	Risk owner	OPEN_AUTHORITY_EVIDENCE	No verified Risk owner or authentic approval evidence.	Confirm risk authority and approve residual fraud, partial-return and maker-checker limitations.

G1-D07-01	D-07	Product owner	OPEN_AUTHORITY_EVIDENCE	No verified Product owner or authentic approval evidence.	Confirm product authority and approve only the Cameroon development scope, not production or statutory certification.
G1-D07-02	D-07	Financial controller	OPEN_AUTHORITY_EVIDENCE	No verified Financial controller or authentic approval evidence.	Confirm finance authority and approve XAF/accounting development scope without making statutory claims.
G1-D07-03	D-07	Qualified Cameroon country-pack reviewer	OPEN_EXTERNAL_EVIDENCE	No named qualified Cameroon reviewer or authentic approval evidence.	Provide dated qualification evidence, stable identity and scoped appointment; review source provenance and approve development-only use.
G1-D08-01	D-08	SRE owner	OPEN_AUTHORITY_EVIDENCE	No verified SRE owner or authentic approval evidence.	Confirm SRE authority and approve the no-SLO claim until support and measurement evidence exists.
G1-D08-02	D-08	Product owner	OPEN_AUTHORITY_EVIDENCE	No verified Product owner or authentic approval evidence.	Confirm product authority and approve the prohibition on production reliability claims.
G1-D08-03	D-08	Support owner	OPEN_AUTHORITY_EVIDENCE	No verified Support owner or authentic approval evidence.	Confirm support authority and approve the communication and escalation boundary while no SLO exists.
G1-D09-01	D-09	Financial controller	OPEN_AUTHORITY_EVIDENCE	No verified Financial controller or authentic approval evidence.	Confirm finance authority and approve the delivery/invoice/revenue recognition boundary with the implementation gap explicit.
G1-D09-02	D-09	Order-to-cash product owner	OPEN_AUTHORITY_EVIDENCE	No verified Order-to-cash product owner or authentic approval evidence.	Confirm O2C authority and approve the process boundary from order confirmation through accepted delivery to invoice.
G1-D09-03	D-09	Qualified accounting reviewer	OPEN_EXTERNAL_EVIDENCE	No named qualified accounting reviewer or authentic approval evidence.	Provide qualification evidence and review the proposed recognition boundary; do not claim legal/accounting certification beyond the reviewed scope.

G1-D10-01	D-10	Inventory controller	OPEN_AUTHORITY_EVIDENCE	No verified Inventory controller or authentic approval evidence.	Confirm inventory-control authority and approve reservation versus physical-issue ownership and evidence requirements.
G1-D10-02	D-10	Fulfillment owner	OPEN_AUTHORITY_EVIDENCE	No verified Fulfillment owner or authentic approval evidence.	Confirm fulfillment authority and approve the physical goods-issue source of truth and exception procedure.
G1-D10-03	D-10	Accounting owner	OPEN_AUTHORITY_EVIDENCE	No verified Accounting owner or authentic approval evidence.	Confirm accounting authority and approve physical issue as the COGS recognition source with exactly-once evidence.
G1-D11-01	D-11	Financial controller	OPEN_AUTHORITY_EVIDENCE	No verified Financial controller or authentic approval evidence.	Confirm finance authority and approve the distinct reconciliation/close boundaries and fail-closed sign-off rule.
G1-D11-02	D-11	Treasury owner	OPEN_AUTHORITY_EVIDENCE	No verified Treasury owner or authentic approval evidence.	Confirm treasury authority and approve statement/reconciliation separation and unresolved-cash fail-closed behavior.
G1-D11-03	D-11	Retail operations owner	OPEN_AUTHORITY_EVIDENCE	No verified Retail operations owner or authentic approval evidence.	Confirm operations authority and approve session/drawer/business-day procedures and exception handoffs.

For every row above: verified subject ID is absent; fresh-authentication evidence is absent; approval timestamp is absent; SoD/COI for an authentic appointee is unverified; signature/evidence reference and SHA-256 are absent; independent verification is absent. Approval must be within **600 seconds** of fresh authentication and bind the exact contract hash, selected option and version.

HRIS, identity and authority finding

The development database currently reports 2 organizations, 84 compliance roles, 88 users, 108 payroll employees/contracts, 14 org units, 84 positions, 84 employment assignments, 82 reporting relationships and 0 delegations. This is a major improvement for **development test coverage** compared with the earlier sparse database.

It does not resolve G1 because the report itself classifies the personas as `SYNTHETIC_DEVELOPMENT_PERSONA`, their authority as `RBAC_AND_HRIS_CONTEXT_ONLY`, signatures as `NOT_STORED_NOT_CLAIMED`, and external qualification as `NOT_CLAIMED`. Distinct seeded maker/checker user IDs prove a test-data invariant, not real appointment authority or approval intent.

G2 intrinsic scorecard and predecessor status

G1 dependency	BLOCKED_BY_PREDECESSOR
PASS_CURRENT	1 / 18
PASS_WITH_LIMITATIONS	4 / 18
OPEN_TECHNICAL	12 / 18
OPEN_EXTERNAL_EVIDENCE	1 / 18
Could pass intrinsically if G1 passed today	5 / 18
Overall G2	Not eligible and intrinsically incomplete

M2-A01	Durable finalization command registry	PASS_WITH_LIMITATIONS	BLOCKED_BY_PREDECESSOR	Yes	No intrinsic functional blocker found; evidence is local, the migration and gate bundle are untracked, and the candidate is dirty.	POS backend and database engineering
M2-A02	Atomic claim and finalization idempotency	PASS_WITH_LIMITATIONS	BLOCKED_BY_PREDECESSOR	Yes	Local implementation and tests exist; clean-candidate and production-database evidence remain absent.	POS backend and database engineering
M2-A03	Deterministic same-key replay	PASS_WITH_LIMITATIONS	BLOCKED_BY_PREDECESSOR	Yes	Locally verified only; full failure-injection evidence is not yet in a current G2 gate bundle.	POS backend and quality engineering
M2-A04	Conflict-safe commit lifecycle and recovery	PASS_WITH_LIMITATIONS	BLOCKED_BY_PREDECESSOR	Yes	Local proof exists; correction-required lifecycle and production operational recovery evidence remain limited.	POS backend, SRE and operations
M2-A05	One active draft and unique cart-line identity	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Current code still uses find-then-create and no complete database uniqueness invariant was found.	POS domain and database engineering

M2-A06	Cart version and command ID concurrency contract	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	SalesOrder now has a version field, but cart mutation schemas and services do not carry commandId/expectedVersion end to end.	POS API and domain engineering
M2-A07	Typed stale-write authoritative result	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	No complete typed stale/conflict envelope carrying authoritative cart version/state was found.	POS API, frontend and workflow engineering
M2-A08	No silent quantity clamp	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	updatePOSCartLine still reduces the requested quantity to quantityOnHand and may delete a line at zero.	POS domain, frontend and product
M2-A09	Full cart, stock and retry race certification	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Commit-result races have evidence, but the complete cart/line/availability/rollback matrix does not.	Quality, POS backend and database engineering
M2-B01	Single POS surface access descriptor	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	A page route catalogue exists, but it does not yet govern every POS surface or module entitlement.	Security, frontend and platform architecture
M2-B02	Consistent POS module entitlement	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Navigation associates POS with sales while POS actions observe moduleSlug pos; the route descriptor does not enforce either module.	SaaS platform, RBAC and POS engineering
M2-B03	Explicit cashier least-privilege allowlist	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	An explicit cashier Permissions list exists, but comprehensive-seed still derives cashier capabilities through broad substring matching.	IAM/security and data seeding
M2-B04	Tenant, location and terminal negative matrix	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Individual scope checks and tests exist, but complete terminal/location negative coverage is not demonstrated.	Security, POS backend and quality engineering

M2-B05	Fresh authentication and maker-checker matrix	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Refund and void use a 300-second fresh-auth rule, but a complete maker-checker/no-self-approval contract is absent.	IAM, risk and POS engineering
M2-B06	Cashier-minimized DTO and redaction	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Public-receipt redaction is tested, but cart/customer mappings still include contact, balance and credit fields without a complete cashier minimization proof.	Privacy, POS backend and frontend
M2-B07	Receipt token signing, expiry and revocation	OPEN_EXTERNAL_EVIDENCE	BLOCKED_BY_PREDECESSOR	No	All 4 foundation checks pass, but release mode reports that the production receipt-token secret is not configured.	Security, SRE and secret custodian
M2-B08	Explicit item/API read permission	PASS_CURRENT	BLOCKED_BY_PREDECESSOR	Yes	No intrinsic blocker found in the assessed route; broader POS surface unification remains B01/B02.	API and security engineering
M2-B09	Privacy, abuse, retention and safe-error evidence	OPEN_TECHNICAL	BLOCKED_BY_PREDECESSOR	No	Focused tests pass, but the canonical closure program still lacks a complete mapped negative/retention/safe-error evidence bundle.	Security, privacy, quality and SRE

Key G2 findings

- 1 A01-A04 are locally verified foundations, not production certification.
- 1 A05-A09 remain open: database uniqueness, command/version concurrency, typed stale results, the silent quantity clamp and the complete race matrix.
- 1 B01-B06 remain open: one access descriptor, module-slug consistency, exact cashier allowlist, complete scope matrix, maker-checker and PII-minimized DTOs.
- 1 B07 correctly blocks in release mode because no managed production receipt signing secret is configured.
- 1 B08 is current: the item API route's five focused permission tests pass.
- 1 B09 needs a complete mapped privacy/abuse/retention/safe-error evidence bundle.

Technical-versus-human blocker matrix

Technical	G2 A05-A09, B01-B06, B09	Yes, subject to reviewed policy inputs	Engineering, product, security and quality
Human decision	Accept D-01 through D-11 options/limitations	No	Appointed accountable role holders
Authority evidence	Stable subject, appointment, scope, dates, delegation, SoD/COI	No	HR/security/governance owner plus independent verifier
External/qualified evidence	D-05 matrix/exclusion, D-07 country review, D-08 baseline, D-09 accounting review, B07 managed secret	Partly	Qualified reviewer, operations/SRE or secret custodian
Predecessor	G2 declaration while G1 is open	No	G1 must first pass 11/11
Evidence drift	Missing historical DOCX path; dirty/untracked candidate; package/schema changes	Engineering can freeze bytes; humans must reapprove affected scope	Evidence owner, release assurance and approvers

Dependency map

Code or command excerpt

Real identity + authority + SoD/COI | Current decision evidence packets | 33
 fresh-authenticated human approvals | Independent verification + live-register update |
 G1 validator = 11/11 PASSED | G2 intrinsic controls A01-A09 + B01-B09 certified |
 Enterprise program gate advances beyond G1/G2 | Broader policy/release gates may become eligible

Reconciliation with earlier reports

G1 technical 12/13; cash-only UI mismatch open	G1 technical 13/13	UI now exposes only CASH and focused tests pass	Resolved/superseded
G1 approval 0/11	Still 0/11	Live register remains empty	Confirmed current
Sparse HRIS: no org unit s/positions/assignments	Development coverage now populated	2026-08-20 synthetic compliance reseed	Development gap resolved; authority gap remains
G2 B08 needed current API proof	B08 PASS_CURRENT	Five focused item-route permission tests pass	Resolved for assessed route
G2 receipt foundation ready; secret missing	Same	Release config gate: 4/4 foundation checks, one missing secret blocker	Confirmed current
Historical DOCX hash/path treated as stable source	Current canonical source path missing; alternate working DOCX locked	Path/bytes no longer resolve as the assessed artifact	Inconsistent evidence; zero credit
Historical rolling package/schema hashes	Current hashes differ	Ongoing dirty-worktree development	Prior rolling candidate bindings are stale; no G1 approval existed to invalidate

Verification results

git status --short	PASSED	Worktree captured; candidate is dirty with relevant modified and untracked POS, schema, migration, gate and evidence files.
npm run prisma:validate	PASSED	Prisma schema is valid.
npm run typecheck	PASSED	TypeScript typecheck passed.
npx --no-install jest scripts/___tests___/pos-g1-contract-gate.test.js s cripts/___tests___/pos-enterprise-program-gate.test.js --runInBand	PASSED	2 suites, 4 tests passed.
npm run pos:g1:contract:gate	BLOCKED_EXPECTED	Non-writing validator: 13/13 technical checks ready, runtime partial with explicit gaps, 0/11 decisions approved, overall BLOCKED.
npm run pos:enterprise:program:gate	BLOCKED_EXPECTED	Non-writing validator: control plane ready, first blocker G1, 0/10 enterprise gates passed, G2 dependency-blocked and partially implemented.
npx --no-install prisma migrate status	PASSED	Development database stoquify_dev_migrated_20260814/public reports 75 migrations and is up to date; this does not prove fresh-database portability.
focused G2/POS Jest set (9 suites)	PASSED	9 suites, 104 tests passed: POS service, offline sync, receipts, tender/session/catalog actions, route/page audit, permissions and migration test.
focused shift-close/electronic-authority Jest set (4 suites)	PASSED	4 suites, 34 tests passed.
npx --no-install jest 'app/api/v1/organisations/[id]/items/___tests___/route.test.ts' ...	FAILED_TOOLING_INVOCATION	Initial regex-pattern invocation matched no tests; no product test ran or failed.
npx --no-install jest --runTestsByPath 'app/api/v1/organisations/[id]/items/___tests___/route.test.ts' --runInBand	PASSED	1 suite, 5 item API permission tests passed.
npm run receipt:token:config-gate:release	BLOCKED_EXPECTED	4/4 token foundation checks ready; release blocked because the production signing secret is not configured; no secret value printed.
npm run policy:gates	SKIPPED_INELIGIBLE	Skipped: G1 is 0/11, G2 has intrinsic blockers, evidence is incomplete and the worktree contains user-owned modified reports.
npm run verify:release	SKIPPED_INELIGIBLE	Skipped for the same eligibility and non-overwrite reasons.

Review-board lens findings

Enterprise/platform architecture	G1/G2 separation is sound; the current blocker is authority/approval, followed by G2 intrinsic controls.
Backend/distributed systems	Commit idempotency foundation is locally strong; cart mutation concurrency remains incomplete.
Database/migrations	Current DB is migration-current, but key A05 invariants are absent and an unrelated fresh-database portability defect remains documented.
Security/IAM/privacy/fraud	Fresh auth exists for refund/void; authority, maker-checker, unified access and cashier PII minimization remain incomplete.
Frontend/design system	Cash-only mismatch is resolved; typed stale/conflict UX remains missing.
Workflow/accessibility/localization	EN/FR development scope is declared; no new accessibility certification was attempted. Conflict/recovery content requires design.
Product/business process	Human acceptance of all 11 operating/accounting choices remains mandatory.
Finance/accounting/reconciliation	Contract boundaries are explicit; qualified accounting review and business-day target gaps remain. No accounting certification claimed.
Cameroon/OHADA	Qualified Cameroon review is absent. Legal/statutory conclusions remain subject to qualified review.
QA/release assurance	147 focused tests pass; gate exit failures are expected blockers. Dirty/untracked evidence prevents release reproducibility.
SRE/DevSecOps	Receipt release secret is absent; production SLO baseline and clean-candidate evidence are missing.
Offline/provider integration	Offline/electronic capture remain fail-closed and disabled; no provider readiness claim is made.
Analytics/data governance	Evidence hashes and machine register are present; immutable authority/approval provenance is not.
AI/agent safety	Agents may collect and verify evidence but must not appoint people or perform human approvals.
SaaS packaging/billing/growth	Not applicable to the G1/G2 pass decision except B02's module-entitlement consistency.

Prioritized recommendation

- 1 Establish the authentic 17-role roster and independent SoD/COI verification.
- 2 Close the D-05, D-07, D-08 and D-09 evidence prerequisites and assemble all 11 decision packets.
- 3 Collect 33 fresh-authenticated, contract-bound approvals; independently rehash and verify them.
- 4 Populate the live register minimally and rerun only the G1 no-write validator; require 11/11.
- 5 In parallel close G2 A05-A09 and B01-B07/B09, preserving B08; then certify G2 after G1 passes.

See [docs/blockers-and-gates/G1_G2_BLOCKER_RESOLUTION_PLAN_2026-08-20.md](#) for owner/input/output/verification/stop-condition detail.

Residual risks and release recommendation

- 1 The contract honestly documents runtime gaps; approval of the contract is not proof that all target production features exist.
- 1 Synthetic HRIS records can be mistaken for real authority if metadata is ignored.
- 1 Approval evidence could be replayed after policy, artifact, authority or evidence drift unless deterministic invalidation is enforced.
- 1 Untracked canonical artifacts and a dirty candidate prevent commit-only reproducibility.
- 1 The alternate compliance DOCX was not hashable while open and is not the approval register's assessed path.

- 1 Production receipt URLs remain blocked until secret custody is configured.

Final disposition: G1 is **BLOCKED** at 0/11 approvals despite 13/13 technical checks. G2 is **BLOCKED_BY_PREDECESSOR** and **intrinsically incomplete**. `policy:gates` and `verify:release` remain **SKIPPED_INELIGIBLE**. No production, legal, statutory, accounting or security certification is granted.
