

G1 names, roles, authority and evidence matrix - 2026-08-19

Identity, authority, evidence and decision completion controls

G1 APPROVAL FINALIZATION

Prepared 2026-08-19

Evidence-bound | approval-gated | fail-closed

No production claim without authentic evidence.

Executive result

G1 has **11 decisions**, **33 role obligations** and **17 distinct required roles**. The frozen decision structure is complete, but the repository currently proves **zero G1 approver names**, **zero G1 authority assignments** and **zero authentic approvals**.

The correct current result is:

- 1 technical G1: **13/13 passed**;
- 1 approved decisions: **0/11**;
- 1 completed role obligations: **0/33**;
- 1 G1: **blocked on governance input**;
- 1 G2: **not yet eligible**;
- 1 production authorization: **false**.

The names found in the authorization DOCX are retained below as candidate/conflict provenance only. None may be copied into the live G1 register.

Authoritative contract binding

Artifact	STOQUIFY-POS-G1-CONTRACT-FREEZE-0.2.0-20260817
Version	0.2.0
Path	docs/pos-enterprise-grade-audit/EXECUTION_06_G1_CONTRACT_FREEZE_V0_2_0.json
SHA-256	11434eb3e1af1826516426e90d2d53a2faa47ade361d91191b5f3e0c950a36db
File size	18,732 bytes
Production authorized	false

Any contract-byte or selected-option change creates a new hash and invalidates approvals for this artifact.

Evidence source inventory

Frozen G1 contract JSON	11434eb...a36db	Decision IDs, titles, options, exact roles and fail-closed scope	Human authority or approval intent
Live approval register	49e19d...e8340	Exact contract binding and current empty approval state	Any completed approval
Working template	00494c...1fad0	Structurally correct 11-decision/33-role preparation content	Identity, authority, authentication or signature evidence
Authorization DOCX	cdca6c...26f3f	Stable candidate names, declared roles and two media-byte hashes	Trusted identity, exact G1 authority, signature mapping or decision approval
DOCX validation JSON	638ca4...39fdf	OOXML inspection, identity conflicts and zero-credit disposition	A replacement for authority or approval evidence

Every discovered name

SANGO MALO	Migration operator; database administrator / engineering lead	NOT_RELEVANT_TO_G1	None	No	Keep separate from G1. Resolve the migration-maker conflict and prove migration-specific identity/authority if used there.
MAXIMILLIANO BONGA	Migration checker; database administrator / engineering lead	NOT_RELEVANT_TO_G1	None	No	Keep separate from G1. Prove migration checker identity, authority and independence if used there.
Tamen Marceline	Maker	CONFLICTING_IDENTITY_OR_ROLE	None	No	Resolve against SANGO MALO through an authoritative identity/appointment source. Do not map either image to either person.
Yonga Springfield	Checker	CONFLICTING_IDENTITY_OR_ROLE	None	No	Resolve against MAXIMILLIANO BONGA through an authoritative identity/appointment source. Do not map either image to either person.
KOUATCHOUA MARK	Product approver; Product Owner or Financial Controller	MENTIONED_UNVERIFIED	None	No	Provide a stable subject ID and one or more unambiguous, dated G1 authority appointments with scope and SoD result.
KOUATCHOUA MARCELINE	Controller approver; SYSTEM ADMINISTRATION	MENTIONED_UNVERIFIED	None	No	Provide explicit finance authority or designate a qualified replacement. System administration does not prove controller, treasury or accounting authority.

The DOCX metadata naming KOUATCHOUA MARK as creator/last modifier proves authorship only. It does not prove that the author authenticated, intended to approve any D-01 through D-11 decision, or held the required authority.

Signature-media disposition

The DOCX contains two handwritten-signature-like JPEG files:

word/media/image1.jpeg	268,495	aa77607039406b919bef4d65fc16424aea9f45b10de39fa47415a98a1e8a864a	Unlabelled paragraph before the Maker section	0
word/media/image2.jpeg	180,993	cdfd3824056ea30ea941c0ed8395cf75ad07d632e53e1c7812c59c9f64072b29	Same unlabelled paragraph	0

There are zero OOXML digital-signature parts, zero certificate relationships, zero signature-origin relationships, zero detached-signature references and zero immutable approval identifiers. The images must not be extracted and reused as portable signature tokens.

Distinct G1 roles and authority owners

Product owner	4	0	Governance/product owner	Stable subject ID; dated Product owner appointment; G1 scope; SoD result
Financial controller	5	0	Governance/finance owner	Stable subject ID; explicit controller appointment; dates, scope and SoD
Payments owner	2	0	Payments governance owner	Stable subject ID; payment-policy authority and scope
Retail operations owner	5	0	Retail governance owner	Stable subject ID; accountable POS operating-policy appointment
POS architect	1	0	Technology governance owner	Stable subject ID; accountable POS architecture appointment
Security owner	2	0	Security governance owner	Stable subject ID; security decision authority; not merely administrator access
Treasury owner	2	0	Treasury governance owner	Stable subject ID; settlement/reconciliation authority
Risk owner	2	0	Risk governance owner	Stable subject ID; risk-acceptance authority
QA owner	1	0	Quality governance owner	Stable subject ID; support-matrix evidence authority
Support owner	2	0	Support governance owner	Stable subject ID; supportability/escalation authority
Qualified Cameroon country-pack reviewer	1	0	Country-pack governance owner	Stable identity; dated qualification; Cameroon scope; independence evidence
SRE owner	1	0	Reliability governance owner	Stable subject ID; SLO/error-budget authority
Order-to-cash product owner	1	0	O2C governance owner	Stable subject ID; end-to-end O2C appointment
Qualified accounting reviewer	1	0	Accounting governance owner	Stable identity; dated qualification and review scope
Inventory controller	1	0	Inventory governance owner	Stable subject ID; inventory-control authority
Fulfillment owner	1	0	Fulfillment governance owner	Stable subject ID; fulfillment-process authority

Accounting owner	1	0	Accounting governance owner	Stable subject ID; stock/COGS accounting-policy authority

Complete 33-obligation matrix

Every approver name and signature field below is UNRESOLVED. The canonical machine-readable rows are in `G1_33_OBLIGATION_FINALIZATION_REGISTER_2026-08-19.json`.

What a governance owner must return for each role

For each distinct role, return a controlled authority record containing:

- 1 The real accountable name for display and audit readability.
- 2 A stable identity-provider subject ID or another immutable identity identifier.
- 3 The exact G1 role label.
- 4 The organization/tenant scope.
- 5 A durable authority/appointment reference.
- 6 Appointment start and end timestamps.
- 7 Any delegation reference, scope and expiry.
- 8 A conflict-of-interest result.
- 9 A segregation-of-duties result, including allowed multi-role combinations.
- 10 For qualified reviewers, dated qualification and jurisdiction/domain scope.
- 11 The identity and authority of the person who verified the appointment.

Application authentication and RBAC may confirm who is logged in and what application permission they hold. They do not, by themselves, prove governance authority for a G1 role.

What each signer must produce

For each assigned decision-role obligation, the signer must:

- 1 Review the exact decision, selected option, rationale, evidence paths, capability impact and fail-closed rollback policy.
- 2 See the complete frozen contract SHA-256, not an abbreviated value.
- 3 Re-authenticate through the approved organization-controlled workflow, preferably with MFA.
- 4 Deliberately select approve or reject within ten minutes of fresh authentication.
- 5 Produce an immutable evidence record containing stable identity, exact role, authority reference, decision ID, selected option, contract hash and trusted timestamps.
- 6 Export the signed/attested evidence and audit trail without editing either file.
- 7 Provide the provider/envelope reference and the exact exported-evidence path or URI.

What the independent verifier must produce

The verifier must be separate from the evidence producer and must:

- 1 resolve the stable identity and authority record;
- 1 verify role scope, dates, qualification and SoD;
- 1 recompute the frozen contract hash;
- 1 verify the decision and selected option;
- 1 confirm `approvedAt >= freshAuthenticatedAt` and the difference is at most ten minutes;
- 1 resolve the signature/envelope reference;
- 1 recompute SHA-256 over the final evidence bytes;
- 1 verify the audit trail and post-signature immutability;
- 1 record a pass/fail decision, verifier identity, role, timestamp and evidence reference.

When the register can be populated

Populate a live decision only when all three exact roles have passed every identity, authority, authentication, signature and independent-verification check. A decision with one or two approvals remains pending and receives no decision credit.

The live register is:

`docs/pos-enterprise-grade-audit/EXECUTION_06_G1_CONTRACT_APPROVAL_REGISTER.json`

It must remain untouched until authentic evidence exists.

Exit condition

The names/roles blocker clears when governance has verified real people for all 17 roles and those assignments cover all 33 obligations. G1 clears only after the 33 authentic approvals are independently verified, imported under the 11 decisions and accepted by the actual G1 validator.
