

Stoquify residual authentic-return checklist — 2026-08-18

Blocker and gate readiness evidence

BLOCKER AND GATE ASSESSMENT REPORT

Prepared 2026-08-18

Evidence-led · bilingual-ready · accessibility-aware · implementation-bounded

Connected operations. Explicit controls. Inspectable evidence.

Use this as the intake contract for every remaining blocker. Do not place secret values in repository evidence. A return is accepted only when its identity, role, authority, timestamp, target hash, decision, and retained artifact validate under the named live consumer.

Immediate repository-owned correction

1	POS product owner + POS engineering owner	cash_only_and_store_credit_runtime_control and D-03 scope	One explicit decision: restore const tenderMethods: TenderMethod[] = ["CASH"] under contract 0.2.0, or produce a formally superseding contract with named-provider evidence and approvals	components/pos/ProfessionalPOSSystem.tsx and, only for a supersession, a new frozen G1 contract/register version	G1 technical checks 13/13 and focused POS gate tests pass; no contract is weakened silently

G1 D-01–D-11 approval returns

For each row below, return one `decisionApprovals[]` object with the exact frozen `selectedOption`, non-empty rationale, effective/review versioning, evidence links, affected capabilities, rollback/disable policy, and one approval object for every required role. Every approval object must include `accountableApprover`, exact `approverRole`, `authorityReference`, `freshAuthenticatedAt`, `approvedAt` within ten minutes, `signatureReference`, and a lowercase 64-character `signatureEvidenceSha256`.

Target: docs/pos-enterprise-grade-audit/EXECUTION_06_G1_CONTRACT_APPROVAL_REGISTER.json

D-01	Product owner; Financial controller; Payments owner	Cash/store-credit behavior matches the frozen option
D-02	Retail operations owner; POS architect; Security owner	Explicit acceptance/treatment of the active-drawer-claim gap
D-03	Payments owner; Treasury owner; Security owner	Electronic tender disabled, or named-provider scope formally supersedes the contract
D-04	Product owner; Risk owner; Retail operations owner	Offline capture remains disabled for current scope
D-05	Retail operations owner; QA owner; Support owner	Physical matrix or signed production exclusion
D-06	Financial controller; Retail operations owner; Risk owner	Current full-sale-only limit and missing partial-return/maker-checker scope explicitly accepted
D-07	Product owner; Financial controller; Qualified Cameroon reviewer	Qualified country-pack review and checker verification
D-08	SRE owner; Product owner; Support owner	Measured service baseline after D-05 scope is fixed
D-09	Financial controller; O2C product owner; Qualified accounting reviewer	Delivered-quantity recognition decision and implementation evidence
D-10	Inventory controller; Fulfillment owner; Accounting owner	Reservation/issue/COGS policy and aggregate evidence

D-11	Financial controller; Treasury owner; Retail operations owner	Business-day/statement/reconciliation/close separation evidence

Destructive-migration return

1	Release manager	final commit, tree, clean state, current package . json and Prisma schema hashes	Clean-candidate freeze record	New superseding evidence bundle; do not overwrite the 2026-08-13/17 history	Candidate mode is production-frozen and zero source drift
2	Production database owner	redacted environment ID, engine/version, region, schema, selected path, history-before, aggregate profile	JSON with SHA-256 references; no credentials	Superseding 05-production-restore-evidence.json / bundle.environment-census.json	Approved remote target and EMPTY_TARGET_EXECUTE or EXISTING_TARGET_RESOLVE_ONLY is evidence-backed
3	Backup/recovery owner	snapshot/PITR ID, creation/retention, KMS reference, size, custodian, integrity ID	Provider-backed backup manifest JSON	Superseding bundle backup-manifest.json	Backup exists, is encrypted, retained, and independently restorable
4	Recovery operator	isolated target, network isolation, restore times, operation ID, logs, schema/history/object tie-outs, RPO/RTO	Restore evidence JSON/logs with hashes	Superseding bundle restore-test.log and production restore evidence	Independent restore and recovery objectives pass
5	Migration maker — identity must be resolved first	every final binding, target decision, 13 dispositions, fresh-auth record, maker signature	maker-attestation.json with detached signature or immutable enterprise approval	Superseding migration bundle	Signature occurs after final manifest; identity/authority maps unambiguously
6	Independent migration checker — distinct from maker/operator	independence/conflict declarations, recomputed hashes, control results, exact decision, later signature	checker-decision.json; decision exactly REJECT_AND_REWORK or APPROVE_EXACT_HASH	Superseding migration bundle	Checker verifies maker and signs after maker
7	Independent checker	one rationale/consequence acknowledgement per finding	13 manually authored version-2 registry entries	prisma/migration-risk-approvals.json	humanAuthored=true is authored by the checker only after APPROVE_EXACT_HASH; 13/13 pass

The current maker conflict is SANGO MALO versus Tamen Marcelline; the checker conflict is MAXIMILLIANO BONGA versus Yonga Springfield. Return an authority-backed identity resolution before either signature is accepted.

Cameroon qualified-review return

Qualified Cameroon statutory reviewer	fullName, professionalCapacity, organization, qualificationReference, qualificationEvidenceSha256, conflict declaration	Qualified-review decision JSON plus retained qualification evidence	Current country-pack evidence directory as review-decision.json	Identity and professional capacity validate
Same reviewer	startedAt, completedAt; recomputation of every source digest	ISO-8601 timestamps and all reviewer-recomputed flags/hashes	review-decision.json	Review window valid and source digests independently recomputed
Same reviewer	Decisions for pensionRatesBps, familyAllowanceRatesBps, occupationalRiskRatesBps, employerRules	Each: decision, source provision, effective dates, independent tie-out SHA-256	review-decision.json	All four complete and consistent
Same reviewer	final decision, approved/excluded families, effective dates, conditions	Final decision APPROVED, REJECTED, or CHANGES_REQUIRED	review-decision.json	Final decision matches every fixture-family decision
Same reviewer	signed artifact filename/hash/time/method	Detached cryptographic signature or immutable enterprise approval artifact	Same country-pack evidence directory	Artifact exists and SHA-256 matches
Independent authorized checker	identity, role, verification time/method, key/credential reference, conflict declaration, evidence path/hash	Checker verification JSON or immutable approval record	Same country-pack evidence directory and manifest required approval	Checker is distinct and verifies retained signature
Authorized maker/checker	productionUseAllowed, review statuses, requiredApproval fields	Manifest transition after preflight authorizes it	docs/HR-Payroll/evidence/country-packs/C M/2026-07-19/manifest.json or a superseding dated manifest	Review preflight 12/12 and production gate 12/12

DGI, MINFI, and CNPS labels alone are not individual reviewer identities.

Hardware return

Retail operations owner; QA owner; Support owner	tested location/terminal/device IDs, model/firmware/driver, browser/OS, executed cases, timestamps, results, evidence hashes	Signed physical hardware matrix	Superseding TEMPLATE-04 evidence packet and G1 D-05 approval	Printer, drawer, scanner, payment terminal, customer display, offline device, fallback/error states are proven
Same roles, if hardware is excluded	exact production exclusion, business consequences, supported receipt path, cash handling procedure, failure/fallback procedure, support runbook	Artifact-bound signed exclusion	EXT-HARDWARE-MATRIX.verificationReference and G1 D-05 evidence links	All three role approvals validate and unsupported hardware is impossible to present as ready

Provider, close, inventory, O2C, operations, and pilot returns

G3A	Payments, treasury, security	Named provider/merchant sandbox; official callback/statement contract; success/decline/timout/unknown/duplicate/late-capture/reversal/refund/dispute/chargeback/settlement/mismatch evidence	EXECUTION_07_G2_G9_GATE_CLOSURE_PROGRAM.json:externalEvidenceRegister[EXT-PROVIDER-SANDBOX]	status=VERIFIED with durable verificationReference after G2
G5	Financial controller, retail close owner	Production-like business-day, declaration, statement, reconciliation, ledger/bank tie-out, suspense aging, late-correction invalidation	externalEvidenceRegister[EXT-CLOSE-CYCLE]	Verified close-cycle evidence after G3A/G3B/G4
G6	Inventory controller, fulfillment, accounting	Signed inventory-scope/un supported-combination policy plus concurrency, reservation, fulfillment, reversal, no-oversell/no-duplicate-COGS proof	externalEvidenceRegister[EXT-INVENTORY-POLICY]	Verified after G2
G7	Financial controller, O2C owner, qualified accounting reviewer	Recognition, allocation/unapplied cash, returns/disposition, correction policy and cross-domain tie-out	externalEvidenceRegister[EXT-AR-RETURNS-POLICY]	Verified after G3A/G3B/G6
G8	SRE, security, support, release operations	Load, soak, loss, outage, backlog, backup/PITR/failover, rotation, penetration/privacy, alert delivery/ack, incident drill bundle	externalEvidenceRegister[EXT-OPS-DRILLS]	Verified after G3A–G7
G9	Pilot/production authority	R0–R6 entry snapshots, SLO/error budget, close/reconciliation cycles, incidents/support load, stop-condition evaluation, signed expand/hold/rollback decision	externalEvidenceRegister[EXT-PILOT-COHORTS]	Verified after G8 and separate pilot authorization

Enterprise external configuration and operations returns

B03	Production database/platform owner	Managed remote target reference, authorization, deployment operation ID, direct migration-history health	Refresh production preflight and what-next/prisma-migration-history-health.json
B04	Security/platform secrets owner	Purpose-specific managed references, versions, owners, rotation evidence, HTTPS origin, live delivery flags	Refresh what-next/release-secret-preflight.json in release-enforced mode
B07	Security credential owner	Environment/source/attestation/release bindings; 15 credential classifications; security owner and approval	docs/agents-runtime/STOQUIFY_AGENT_RUNTIME_CREDENTIAL_ROTATION_REGISTER_2026-07-25.json or superseding dated register
B08/B10	Release operations, product/security approvers, six owner pairs	CI/governance evidence; product/security approvals; rollout, rollback, support, pilot, security-incident, on-call primary/backup acceptances; scheduler and alert proofs	Operational release evidence register or superseding dated register
B09	Release manager	New clean candidate and zero-drift freeze	Superseding Phase 2A freeze attestation
B11	Phase 2B authority	23/23 artifact-bound entry decision after Gate 017 GO	Superseding Phase 2B decision
B12	Phase 3 authority	Successful pilot exit and 34/34 production decision	Superseding Phase 3 decision

Return order

- 1 Resolve the cash-only contract mismatch and stabilize the source tree.
- 2 Complete repository-owned non-signature evidence and recompute current hashes.
- 3 Complete production target, backup, restore, provider, hardware, statutory, and operational evidence.
- 4 Generate the final manifests.
- 5 Obtain fresh-authenticated signatures/approvals over those exact final hashes.
- 6 Hash completed approval artifacts and update parent manifests/registers last.
- 7 Rerun focused gates, then `npm run policy:gates`.
- 8 Run `npm run verify:release` only when all authentic prerequisites exist and the candidate is clean.
