Required manual sequence

- 1 Governance confirms the legal employer, tenant and canonical authority-role policy.
- 2 HR/security independently verifies the person and binds `User.id` to `PayrollEmployee.id`.
- 3 HR creates a current effective-dated position and employment assignment.
- 4 An authorized corporate/governance issuer signs a separate G1 control-role appointment or bounded delegation.
- 5 An independent controls reviewer records SoD/COI and qualification results.
- 6 The approval service verifies eligibility, then requires fresh authentication.
- 7 The human deliberately approves the exact decision and option bound to the frozen contract hash.
- 8 Final evidence is exported; a separate verifier resolves it, recomputes SHA-256 and records pass/fail.
- 9 Only a minimal verified payload may be copied to the live G1 approval register.
- 10 The actual `pos:g1:contract:gate` decides whether G1 passes; this bridge never declares passage.

Invalidation

- 1 Contract artifact/version/path/hash drift

- 1 Identity or tenant mismatch
- 1 Employment termination, suspension or assignment expiry
- 1 Appointment or delegation expiry, revocation or scope mismatch
- 1 SoD/COI/qualification evidence expiry or policy change
- 1 Fresh authentication outside the ten-minute approval window
- 1 Signature/evidence reference cannot be resolved or rehashed
