

Cameroon HRIS authority implementation backlog

Employment, statutory provenance, governance authority and G1 approval readiness

CAMEROON HRIS / PAYROLL AUTHORITY EVIDENCE

Prepared 2026-08-19

Evidence-led · bilingual-ready · accessibility-aware · implementation-bounded

Connected operations. Explicit controls. Inspectable evidence.

Prepared 2026-08-19 Status: **PROPOSED — NO IMPLEMENTATION OR MIGRATION PERFORMED**

Delivery principle

Keep the first implementation narrow and G1-focused. Each phase is additive, testable and reversible. No phase may create human approvals automatically.

P0-01	Phase 0	Confirm Stoquify legal employer, tenant and evidence owner	Governance/legal	Signed decision record; no guessed entity
P0-02	Phase 0	Qualified review of Labour Code, implementing orders, CNPS and DGI 2026 applicability	Cameroon counsel/payroll specialist	Reviewed source register with dated conclusions
P0-03	Phase 0	Approve 17 canonical role codes, scope and 33-obligation matrix	Governance/product/controls	Versioned role catalog and policy hash
P0-04	Phase 0	Approve SoD/COI, qualification, delegation, retention and MFA policies	Security/controls/legal	No unresolved policy required by eligibility
P1-01	Phase 1	Implement read-only evidence intake and independent verification records	HRIS/backend	No authority from unverified evidence; tenant tests pass
P1-02	Phase 1	Implement verified User↔PayrollEmployee identity link	IAM/HRIS	Stable ID, tenant and evidence checks; display-name matching rejected
P1-03	Phase 1	Populate verified positions and employment assignments for real staff	HR owner	Effective-dated records; 17 candidate rows resolved or rejected
P1-04	Phase 1	Add privacy/redaction and evidence access controls	Security/privacy	No raw ID/CNPS/session secrets in logs/reports
P2-01	Phase 2	Add versioned control-role catalog and assignments	Controls/backend	Role separate from job/RBAC; appointment evidence required
P2-02	Phase 2	Add bounded delegations with mandatory expiry and invalidation	Controls/backend	No self-delegation; role/decision/scope explicit
P2-03	Phase 2	Implement SoD/COI and qualification assessment	Controls/compliance	Producer/checker and role-pair policies fail closed
P2-04	Phase 2	Build current eligibility read model	Backend	Employment, authority, dates, policy and conflicts jointly enforced
P3-01	Phase 3	Create G1 approval envelope and attestations	Backend/security	Exact contract/option/role, fresh auth and deliberate intent
P3-02	Phase 3	Implement independent final evidence verification	Assurance/backend	Artifact resolves and rehashes; verifier separated
P3-03	Phase 3	Implement drift invalidation and dependency graph	Backend/SRE	Contract/authority/policy/evidence change invalidates affected approvals

P3-04	Phase 3	Build detached register export with human-controlled import	Backend/governance	No silent live-register write; minimal patch reviewable
P3-05	Phase 3	Run narrow G1 tests and validator only when eligible	QA/governance	11/11 actual validator result required
P4-01	Phase 4	Add provider-neutral e-signature adapter if required	Integration/security/legal	Provider audit trail maps to internal envelope
P4-02	Phase 4	Assess supported CNPS/DGI adapters	Integration/compliance	No scraping or credential reuse; manual fallback preserved

Phase gates

- 1 **Phase 0 exit:** legal/governance decisions are signed and source-provenanced.
- 1 **Phase 1 exit:** identities and employment records are verified; no G1 authority yet.
- 1 **Phase 2 exit:** all 17 roles have verified assignments or explicit unresolved status; SoD/COI/qualification results exist.
- 1 **Phase 3 exit:** all 33 approvals are deliberate, fresh-authenticated, artifact-bound and independently verified; the actual validator reports 11/11.
- 1 **Phase 4 entry:** only after a documented need for external integration and security/legal review.

Rollback

- 1 Disable the module feature flag and return eligibility as blocked.
- 1 Preserve append-only evidence, invalidation and audit history.
- 1 Do not delete employment or authority history.
- 1 Keep the manual templates/process available.
- 1 Never roll back by accepting stale or weaker evidence.

Required test families

- 1 Tenant-crossing and identity mismatch.
- 1 Display-name collision and renamed user.
- 1 Employment termination/suspension/assignment expiry.
- 1 Appointment/delegation expiry, revocation and supersession.
- 1 Maker/checker, producer/verifier and role-pair conflicts.
- 1 Qualification expiry.
- 1 Contract, policy, authority and evidence hash drift.
- 1 Future/stale/cross-tenant authentication and >10-minute approval.
- 1 Evidence path substitution and failed rehash.
- 1 Duplicate/replayed provider or approval events.
