

Cameroon HRIS schema and data gap report

Employment, statutory provenance, governance authority and G1 approval readiness

CAMEROON HRIS / PAYROLL AUTHORITY EVIDENCE

Prepared 2026-08-19

Evidence-led · bilingual-ready · accessibility-aware · implementation-bounded

Connected operations. Explicit controls. Inspectable evidence.

Prepared 2026-08-19 Classification: **VERIFIED REPOSITORY ASSESSMENT**

Outcome

The HRIS schema and its migration are present. The blocking condition is missing or unverified runtime data and missing governance control-role evidence.

Are the core HRIS tables absent?	No	prisma/schema.prisma and migration 20260719190000_hris_org_manager_scope_foundation
Do employment assignments exist in the controlled lookup?	No — 0 records	docs/blockers-and-gates/COMPLIANCE_AUTHORIZATION_G1_PREFILL_STATUS_2026-08-19.json
Do manager delegations exist?	No — 0 records	docs/blockers-and-gates/COMPLIANCE_AUTHORIZATION_G1_PREFILL_STATUS_2026-08-19.json
Do the 17 candidate names exactly match verified users/employees?	No — 0 exact matches	docs/blockers-and-gates/COMPLIANCE_AUTHORIZATION_G1_PREFILL_STATUS_2026-08-19.json
Does the asserted tenant match?	No — 0 tenant matches	docs/blockers-and-gates/COMPLIANCE_AUTHORIZATION_G1_PREFILL_STATUS_2026-08-19.json
Can candidate names be imported as authorities?	No	All 17 remain CANDIDATE_NOT_VERIFIED

Controlled data snapshot

Organizations	2
Users	28
Payroll employees	24
Employment assignments	0
Manager delegations	0
Candidate names queried	17
Exact identity matches	0

The snapshot was recorded by the existing prefill assessment as a read-only transaction and rolled back after retrieval. This run did not mutate or reseed the configured database.

Existing reusable capabilities

- 1 `User.id` is the application subject key; `User.organizationId` provides direct tenant ownership.
- 1 Sessions persist assurance time, method, organization and level.
- 1 `requireFreshAuth()` rejects future, stale, cross-tenant or insufficient assurance.
- 1 Password step-up has session CAS-style updates, lockout and security-event logging.

- 1 `PayrollEmployee` has tenant uniqueness, employment status/dates, masked identifier fields and identifier hashes.
- 1 HRIS units, positions and employment assignments are effective-dated and tenant-scoped.
- 1 Reporting relationships and manager delegations require evidence/reason hashes, forbid self-relations/delegations and model revocation/supersession.
- 1 HRIS scope resolution enforces tenant, permission, effective-date and delegated-scope checks and emits audit records.
- 1 `BusinessEvent` provides tenant/idempotency/payload-hash foundations; `AuditLog` provides actor, organization and change history.

Material gaps before G1 authority can rely on them

- 1 **Subject-to-employee binding is not evidence-grade.** `PayrollEmployee.userId` is optional and unique per tenant but is not modeled as a database foreign-key relation to `User`.
- 2 **No control-role catalog or appointment model exists.** Job titles, RBAC roles and manager delegations cannot safely represent the 17 canonical G1 roles.
- 3 **Manager delegation is too generic.** `APPROVAL_DECISION` does not identify the G1 role, decision IDs, contract/policy version or capability exclusions.
- 4 **No employment/identity evidence registry exists.** Contract, CNPS, identity, issuer, path, hash, verification and expiry are not first-class records.
- 5 **No first-class SoD/COI assessment exists.** Distinct names are not proof of independence or conflict clearance.
- 6 **No qualification registry exists** for the Cameroon country-pack reviewer or qualified accounting reviewer.
- 7 **Current step-up assurance is password level only.** MFA requirements for G1 remain a governance/security decision.
- 8 **Audit evidence is not sufficient by itself.** `AuditLog` is useful history but has no visible hash chain or independent-verification boundary.
- 9 **The G1 validator is necessary but presence-oriented.** It validates required fields, roles, contract-register binding and the ten-minute window, but a separate verifier must resolve authority and evidence artifacts and recompute hashes.
- 10 **No authority-drift invalidation engine exists** connecting HR termination, appointment revocation, policy changes and artifact changes to approval eligibility.

Architecture graph evidence

`graphify-out/GRAPH_REPORT_actions.md` identifies HRIS payment-destination workflow Community 16 and payroll action/test communities 47-55. The payroll communities consistently expose RBAC and fresh-authentication test dependencies, supporting reuse of those controls. The graph also flags `MockFreshAuthRequiredError` as weakly connected, so graph inference is not treated as proof of runtime enforcement; source-code verification remains required.

Verified artifact fingerprints

Disposition

- 1 Do not add replacement HRIS tables.
- 1 Populate verified employee/assignment records through a controlled onboarding workflow.
- 1 Add a narrow, separate authority-evidence layer rather than overloading employment, job-title or RBAC data.
- 1 Do not populate the live G1 register until independent authority and approval evidence exists.
