

M0/G0 and M1/G1 Approval Packet

Status: **ACTION REQUIRED**

Program: STOQUIFY-POS-SALES-TO-CASH

Date: 2026-08-17

This packet records accountable decisions; it is not itself an approval. Each accepted decision must identify the approver, role, rationale, effective version/date, review or expiry date, evidence links, affected capabilities and rollback/disable policy.

Immediate migration-safety decision

The local migration safety gate found 13 destructive clauses in

20260611130000_accounting_auth_baseline_bridge/migration.sql. The registry is deliberately empty and the existing evidence says a named human checker must manually author one entry per exact finding hash after an APPROVE_EXACT_HASH decision.

The migration is already applied to the configured local development database, which reports 67/67 migrations. Do not edit or replace this historical file: that would create checksum drift. Select the target-specific adoption path instead:

- EMPTY_TARGET_EXECUTE** — only for a verified empty target after a named checker approves all 13 exact finding hashes and confirms the migration guard, authentication compatibility and recovery plan.
- EXISTING_TARGET_RESOLVE_ONLY** — for an existing compatible database only after clone/profile/reconciliation, backup and tested restore prove that executing the bridge would be destructive and that `prisma migrate resolve --applied` changes migration history only.
- ALREADY_APPLIED_VERIFY** — when authoritative migration history proves this exact checksum already succeeded; retain exact-hash review for future release-gate safety and verify authentication continuity.
- REJECT_TARGET** — do not deploy to the target when the required profile, backup/restore, compatibility or checker evidence cannot be produced.

Current production disposition is **REJECT_TARGET**: no authoritative target, backup identifier, restore test, production-like data profile or checker decision is present. Do not copy a generated template into the approval registry and do not approve by migration-file hash alone.

Product and control decisions

ID	Recommended selection	Required accountable roles
D-01	Disable/hide/reject store credit until a governed liability ledger exists	Product, controller, payments
D-02	Physical terminal/register and drawer claim is the active-session lock	Retail operations, architecture, security
D-03	Select one named provider/country sandbox; otherwise electronic tender remains disabled	Payments, treasury, security
D-04	Bounded cash-only offline after device/replay gates	Product, risk, retail operations

ID	Recommended selection	Required accountable roles
D-05	Narrow named browser/OS/terminal/printer/scanner/drawer matrix	Retail operations, QA, support
D-06	Linked compensating returns/refunds with reason, disposition, fresh auth and maker-checker	Controller, retail operations, risk
D-07	Cameroon/XAF/EN-FR as development candidate; production only after qualified country review	Product, controller, country-pack reviewer
D-08	Roadmap performance budgets measured against the approved D-05 matrix	SRE, product, support
D-09	Invoice from accepted delivered quantity; order confirmation is non-posting	Controller, O2C product, accounting reviewer
D-10	Reservation affects availability only; physical issue owns stock and COGS	Inventory controller, fulfillment, accounting
D-11	Session, drawer declaration, business day, statement, reconciliation and accounting close remain separate	Controller, treasury, retail operations

Approval record template

```

decisionId: D-XX
selectedOption: <explicit selection>
rationale: <why this is appropriate for the named pilot>
accountableApprover:
  name: <human name>
  role: <accountable role>
approvedAt: <ISO-8601 timestamp>
effectiveVersion: <policy/country/provider/product version>
reviewOrExpiryAt: <ISO-8601 timestamp>
evidenceLinks:
  - <source or evidence path>
affectedCapabilities:
  - <capability>
rollbackOrDisablePolicy: <how it is safely disabled or reversed>

```

Approval of the roadmap as a direction does not silently approve these material choices. Missing fields keep G0/G1 blocked.
