

POS enterprise-grade audit evidence

Audit date: 2026-08-16

Route: /[locale]/dashboard/pos

Mode: read-only audit; no POS transaction, database write, migration, or seed mutation was performed.

Verification record

Check	Result
Focused POS Jest suites	PASS — 3 suites, 54 tests, 0 skipped
Expanded POS Jest selection	PASS — 24 suites passed, 1 skipped; 199 tests passed, 7 skipped
TypeScript typecheck	PASS
POS translation parity	PASS — 245 English keys, 245 French keys, no missing keys
Opt-in PostgreSQL close certification	NOT RUN — seven tests are intentionally skipped without the opt-in database environment
Authenticated current-state browser capture	BLOCKED — login was authorized on the resumed run, but after the first request reached localhost while the server was offline, the fresh browser session blocked subsequent localhost navigation under its URL safety policy

Before the interruption, the browser reached the current English login page and confirmed that the POS route redirects unauthenticated users to /en/login. On the resumed run, the local development server initially refused the connection; it was started successfully, but the browser then blocked navigation under its URL safety policy. That control was not bypassed. Credentials were not transmitted in the resumed session, and no password is stored in this directory.

Historical images under what-next/evidence/pos-sale-assurance-en-2026-08-15.png and what-next/evidence/pos-sale-assurance-fr-2026-08-15.png were reviewed only as supporting evidence. They are not relabelled as current cashier-session proof.

Evidence handling

- Source references in the report are based on the working tree as inspected on 2026-08-16.
- Graph references describe topology and communities; graph line metadata may lag the current dirty working tree.
- Seed credentials were inspected only to assess role scope. Password values are intentionally excluded.
- No production certification, browser-matrix certification, fiscal certification, PCI certification, or offline certification is claimed.
