

POS + Purchase Audit Gates — Jira-ready Execution Pack

As of: 2026-08-18
Scope: POS Enterprise Sales-to-Cash and Purchase-to-Pay readiness (as reported in yesterday's POS + Purchase audit outputs)
Status: Cross-domain P0/P1 gaps remain; report is execution-grade, not yet implementation complete.

1) How useful is this Jira report?

Short answer

Very useful for execution planning: **8.7/10**

Why it is useful

- It translates audit findings into concrete work items with explicit dependencies, boundaries, and test commands.
- It preserves audit evidence traceability by linking each P0/P1 item to evidence files and validation commands.
- It identifies risk hotspots that should gate release and clarifies sequencing (tenant boundaries and provider-truth first, then billing/integrations).

What it currently misses (so it is not 10/10 yet)

- It is not a direct Jira CSV import artifact (no Jira project keys, issue IDs, field-mapping metadata, or sprint/team assignment baked in yet).
- Some acceptance criteria need owner-level sign-off on who owns fiscal/provider/operator evidence (currently inferred from domain ownership).
- A few P0s are policy- and operations-driven, so the full pass requires external artifacts (country pack approvals, fiscal device contracts, operator/cashier enablement attestations) before close.

2) Jira-ready ticket pack (POS + Purchase)

2.1 POS delivery-to-cash slice (P0/P1)

Epic	Jira Issue Key (proposed)	Priority	Summary	Acceptance (must-have)	Owner
O2C-GOV-POS	O2C-1	P0	Enforce tenant-scoped <code>clientCommitId</code> replay + conflict-safe dedupe for POS commits	Duplicate POS commit attempts with same tenant key are idempotent; duplicate command for same <code>clientCommitId</code> returns existing commit result and never double-posts stock/accounting	POS Platform + API Platform
O2C-GOV-POS	O2C-2	P0	Lock provider-authoritative tender truth pipeline	Provider tender truth (cash/momo/card) is source of payment correctness; POS cash truth is read-only mirror with reconciliation checks and provider token checks	Payments + Accounting
O2C-GOV-POS	O2C-3	P0	Enforce immutable receipt/fiscal proof lineage for POS sales	Every sale has immutable chain: raw tender event → verification/validation result → fiscal token chain → accounting output	Fiscal Engine + Accounting
O2C-GOV-POS	O2C-4	P0	Standardize access-boundary checks across POS commit and payment surfaces	Tenant and tenant-role authorization is validated at command, workflow, and API boundaries for all command entry points	Security/Platform
O2C-GOV-POS	O2C-5	P0	Add release evidence package for concurrency, provider, offline close, and fiscal safety	Produce release evidence for runbook-defined production checks (concurrency, provider, offline sync close, fiscal signing, and replay safety)	QA + DevOps + PM
O2C-DEL	O2C-6	P1	Create controlled delivery/fulfillment command for scoped reservation and goods issue	Delivery command creates scoped reservation, records reservation/issue state transitions, writes outbox + inventory movement + workflow proof	Inventory + POS Workflow
O2C-DEL	O2C-7	P1	Generate invoice/AR from delivered quantities + reversal-safe lifecycle	Billing AR command uses delivered quantities only, emits inverse entry on reversal, and preserves tenant isolation	Accounting + Billing
O2C-DEL	O2C-8	P1	Add tenant-safe duplicate-command guard for delivery, reversal, billing flows	Re-issuing any of commit/reconciliation commands returns idempotent existing result; no double-inventory or double-AR	Platform + Workflow
O2C-DEL	O2C-9	P1	Add delivery closure and controller-grade audit artifacts	Close/reopen/exception actions produce structured audit artifacts with actor, reason, previous state, and replay metadata	Workflow Team + QA

2.2 Purchase-to-pay governance slice (P0/P1)

Epic	Jira Issue Key (proposed)	Priority	Summary	Acceptance (must-have)	Owner
P2P-GOV	P2P-1	P0	Enforce GRNI control and receipt sequencing	GRNI lifecycle cannot skip creation, sequence cannot be bypassed, and missing checkpoints block commit	Purchase + Accounting
P2P-GOV	P2P-2	P0	Add operator identity boundary controls for material movements	Only authorized operators can receive/inspect/adjust GRNs; unauthorized actions hard-blocked with audited denial	Purchase + Security
P2P-GOV	P2P-3	P0	Implement inspection event policy and inspection-must-have path	Inbound receive flow captures inspection outcomes; exceptions route to hold state with explicit resolution path	Supply Chain + QA
P2P-GOV	P2P-4	P0	Add unmatched/exception handling for goods receipt reconciliation	Receipt matching exceptions produce explicit discrepancy entities and closure evidence	AP & Reconciliation

Epic	Jira Issue Key (proposed)	Priority	Summary	Acceptance (must-have)	Owner
P2P-GOV	P2P-5	P0	Add return/credit and document evidence integrity boundaries	Return/credit requires source doc reference and immutable evidence linkage; adjustments must be auditable by tenant	AP + Procurement
P2P-GOV	P2P-6	P1	Normalize inventory boundary checks for purchase workflows	Purchase workflows cannot mutate unauthorized inventory pathways (fixture/seed/test code excluded from production checks)	Inventory Governance
P2P-GOV	P2P-7	P1	Add workflow assurance/runtime evidence for service boundary proof	Add test/evidence proving workflow tables and boundary gates are respected for receive, match, invoice, reversal	Assurance Team

2.3 Cross-cutting hardening

Epic	Jira Issue Key (proposed)	Priority	Summary	Acceptance (must-have)	Owner
O2C-ENABLE	O2C-10	P0	Preserve immediate POS commit behavior while adding scoped delivery slice	commitPOSSale command path remains unchanged; new delivery/fulfillment path isolated behind explicit command model and outbox events	Architecture Lead
O2C-ENABLE	O2C-11	P1	Integrate provider capture and reconciliation in one lifecycle contract	Provider evidence captured once, reused by payment truth, receipt token, and AR output	Payments + Accounting
O2C-ENABLE	O2C-12	P1	Add duplicate-command and tenant-scope regression pack	Test matrix runs unauthorized tenant/duplicate scenario commands against command services, actions, and API surfaces	QA Platform

3) Risk register (owners + deadlines)

Risk	Impact	Likelihood	Owner	Deadline	Mitigation	Severity
Missing tenant isolation in any command path	Double billing, data leak	High	Platform Security	D+2	Add tenant guard tests at command + action boundaries; fail closed	P0
POS provider truth drift from direct provider calls	False payment truth, reconciliation drift	High	Payment Team	D+3	Enforce provider-authoritative schema validation + immutable provider event capture	P0
Inventory movement created outside scoped fulfillment path	Stock mismatch and untraceable cost flow	Medium	Inventory Team	D+5	Gate all receive/issue paths through reservation and scoped command flow	P0
GRNI and inspection missing on PO receive	Contractual and audit non-compliance	High	Procurement/Accounting	D+5	Mandatory workflow state machine + hard validation + exception queue	P0
Test duplication and rollback gaps	Hidden regression risk in production	High	QA Automation	D+7	Add duplicate command tests, reversal tests, and replay tests as first-class CI jobs	P1
Lack of production evidence artifacts (offline, signature, concurrency)	Release block	Medium	Release/Compliance	D+7	Capture operator and platform evidence bundle in release gate runbook	P0
Document evidence and sequence continuity gaps	Audit rejection at close	Medium	Compliance	D+10	Evidence index with document IDs + automated completeness checks	P1
Country-pack/legal review not attached to acceptance	Hard close dependency unresolved	Medium	Ops/Legal	D+12	Include statutory pack and review sign-off as preconditions in acceptance matrix	P1

Suggested sequencing

- P0 core (48–72h):** O2C-1..O2C-5 + P2P-1..P2P-5
- Evidence closure (2–3 days):** O2C-5, P2P-6, P2P-7 + offline/fiscal/reversal evidence
- Stabilization (1–2 days):** O2C-6..O2C-9 + O2C-10..12 + release-ready run

4) Acceptance matrix (single matrix for P0/P1)

Item	Priority	Required evidence file(s)	Primary v
O2C-1 Tenant-scoped commit replay	P0	docs/pos-enterprise-grade-audit/EXECUTION_02_CLIENT_COMMIT_REPLAY_GATE.md; docs/enterprise-readiness-audit/STOQUIFY_UNRESOLVED_EVIDENCE_AND_APPROVAL_REGISTER_20260817.md	npm run test -- services/pos/___result.postgres.test.ts; npm run services/pos/___tests___/pos.serv
O2C-2 Provider-capture authoritative truth	P0	docs/pos-enterprise-grade-audit/EXECUTION_02_PAYMENT_CASH_TRUTH_GATE.md; docs/enterprise-readiness-audit/STOQUIFY_UNRESOLVED_EVIDENCE_AND_APPROVAL_REGISTER_20260817.md	npm run payment:cash-truth:gate; services/pos/___tests___/pos-comm
O2C-3 Immutable receipt/fiscal chain	P0	docs/pos-enterprise-grade-audit/EXECUTION_04_G0_BASELINE_GATE_EVIDENCE.json; docs/pos-enterprise-grade-audit/EXECUTION_05_G0_FINAL_REASSESSMENT_GATE_EVIDENCE.json	npm run receipt:token:config-ga
O2C-4 Access-boundary normalization	P0	docs/enterprise-readiness-audit/STOQUIFY_UNRESOLVED_EVIDENCE_AND_APPROVAL_REGISTER_20260817.md; docs/pos-enterprise-grade-audit/EXECUTION_07_G2_G9_GATE_CLOSURE_PROGRAM.md	npm run test -- actions/pos/___t -- services/pos/___tests___/pos.s

Item	Priority	Required evidence file(s)	Primary v
O2C-5 Release closure evidence (concurrency/provider/offline/fiscal)	P0	docs/pos-enterprise-grade-audit/EXECUTION_03_M2_DATABASE_CERTIFICATION_PREFLIGHT.md; docs/pos-enterprise-grade-audit/EXECUTION_05_G0_FINAL_REASSESSMENT_GATE_EVIDENCE.json	npm run offline:pos:replay:gate; receipt:token:config-gate
O2C-6 Controlled delivery/fulfillment command path	P1	docs/pos-enterprise-grade-audit/STOQUIFY_ENTERPRISE_SALES_TO_CASH_IMPLEMENTATION_ROADMAP_2026-08-17.md; docs/pos-enterprise-grade-audit/STOQUIFY_ENTERPRISE_SALES_TO_CASH_AUDIT_AND_MODERNIZATION_2026-08-16.md	npm run test -- actions/pos --ri services/pos/__tests__/pos.serv:
O2C-7 Delivered-qty AR generation + reversal safety	P1	docs/pos-enterprise-grade-audit/STOQUIFY_ENTERPRISE_SALES_TO_CASH_READINESS_2026-08-16.md; docs/enterprise-readiness-audit/STOQUIFY_UNRESOLVED_EVIDENCE_AND_APPROVAL_REGISTER_20260817.md	npm run test -- services/account runInBand
O2C-8 Duplicate command guard (delivery/billing/reversal)	P1	docs/pos-enterprise-grade-audit/EXECUTION_02_M2_CLIENT_COMMIT_REPLAY_REPORT.md; docs/pos-enterprise-grade-audit/EXECUTION_02_OFFLINE_POS_REPLAY_GATE.md	npm run test -- services/pos/___ result.postgres.test.ts; npm run actions/pos/___tests___/tender.ac
O2C-9 Delivery closure/closeout artifacts	P1	docs/pos-enterprise-grade-audit/EXECUTION_07_G2_G9_GATE_CLOSURE_PROGRAM.md; docs/pos-enterprise-grade-audit/EXECUTION_02_M2_CLIENT_COMMIT_REPLAY_REPORT.md	npm run test -- services/pos/___ - actions/purchaseOrderWorkflow/_
P2P-1 GRNI sequencing	P0	docs/purchase-enterprise-grade-audit/STOQUIFY_ENTERPRISE_PROCURE_TO_PAY_READINESS_2026-08-17.md; docs/purchase-enterprise-grade-audit/STOQUIFY_ENTERPRISE_PROCURE_TO_PAY_AUDIT_AND_MODERNIZATION_2026-08-17.md	npm run test -- services/purcha: batch.service.test.ts
P2P-2 / P2P-3 Inspection + operator control	P0	docs/purchase-enterprise-grade-audit/03-evidence-and-verification-ledger.md; docs/enterprise-readiness-audit/STOQUIFY_UNRESOLVED_EVIDENCE_AND_APPROVAL_REGISTER_20260817.md	node scripts/workflow-assurance-run test -- services/purchase-on batch.service.test.ts
P2P-4 Match exceptions	P0	docs/purchase-enterprise-grade-audit/STOQUIFY_ENTERPRISE_PROCURE_TO_PAY_VERIFICATION_2026-08-17.md; docs/purchase-enterprise-grade-audit/03-evidence-and-verification-ledger.md	node scripts/ap-fraud-control-r scripts/purchasing-ap-consolidat

P2P-6 Boundary violation checks	P1	docs/purchase-enterprise-grade-audit/evidence/inventory-boundary-readiness.md; docs/purchase-enterprise-grade-audit/evidence/inventory-boundary-readiness.json; docs/enterprise-readiness-audit/STOQUIFY_UNRESOLVED_EVIDENCE_AND_APPROVAL_REGISTER_20260817.md	node scripts/inventory-boundary-
P2P-7 Service/workflow boundary assurance	P1	docs/purchase-enterprise-grade-audit/STOQUIFY_ENTERPRISE_PROCURE_TO_PAY_VERIFICATION_2026-08-17.md; docs/pos-enterprise-grade-audit/EXECUTION_03_M2_DATABASE_CERTIFICATION_PREFLIGHT.md	node scripts/service-boundary-g; assurance-runtime-table-check.js

5) What to do next (immediate)

1. **Import this as parent epics + linked stories in Jira** (copy each ticket row into Jira CSV/import tool, then assign real issue keys and sprint owners).
2. **Run a 30-minute “P0 bridge” slice** on: O2C-1, O2C-2, O2C-3, O2C-4, P2P-1, P2P-3, P2P-5.
3. **Publish evidence index updates in one place** (single JSON/MD registry under docs/pos-purchase-audit-gates) so each acceptance command points to current artifact snapshots.
4. **Only then run P1s** (delivery/billing and inventory operator hardening) to keep release risk bounded.
