

Purchase Enterprise-Grade Audit — Evidence and Verification Ledger

Audit date: 2026-08-17

Workspace: E:\ohada saas\Focused projects\stoquify

Purpose: Reproducible inventory of evidence used by 02-purchase-enterprise-grade-audit-report.md

Interpretation rule: A passing static or unit test verifies its stated contract; it does not certify the rendered page, legal compliance, security, accessibility, or release readiness.

1. Evidence status summary

Evidence class	Status	Result
Source and route inspection	Passed	Canonical and shadow routes, components, actions, services, permissions, schema, and tests were inspected.
Architecture graph inspection	Passed	Purchase, AP, component, action, and hook communities were identified in all required graph families.
Focused purchase UI tests	Passed with product caveat	7 suites / 18 tests passed. One test explicitly treats the broken overview <code>notFound()</code> outcome as expected behavior.
Focused service/control tests	Passed	6 suites / 336 tests passed, including purchase service, receipt batch, analytics, purchasing/AP consolidation, AP fraud control, and report-trust export gates.
Protected-route redirect	Passed	Unauthenticated <code>/en/dashboard/purchases</code> returned 307 to login with callback URL.
Unauthenticated browser render	Passed	Secure workspace login page rendered; screenshot captured.
Authenticated purchase browser render	Blocked	No authenticated browser session existed; entering local test credentials required user confirmation.
Purchase desktop/tablet/mobile visual review	Blocked	Depends on authenticated access. No purchase viewport was claimed as verified.
Interactive purchase workflows	Blocked	No mutations or seed/reset operations were authorized.
Accessibility automation/manual keyboard	Blocked	Requires authenticated purchase surface and a safe test state.

Evidence class	Status	Result
Performance measurement	Skipped	No representative 10k purchase dataset or authorization to seed/reset; source review identified confirmed unbounded/duplicate requests.
Repository-wide typecheck/build/lint	Skipped	Audit-only scope and heavily dirty worktree; focused tests were chosen to avoid conflating unrelated changes.

2. Runtime and screenshot evidence

Item	Evidence	Status
Existing local server	Port 3000 already occupied by a responding Stoquify instance; second dev-server attempt returned <code>EADDRINUSE</code> .	Existing runtime used
Protected boundary	<code>Invoke-WebRequest http://localhost:3000/en/dashboard/purchases</code> returned 307 and callback to the same localized route.	Confirmed
Login DOM	In-app browser semantic snapshot exposed Email address, Password, Remember me, and Enter workspace controls.	Confirmed
Login screenshot	<code>evidence/unauthenticated-login-boundary-desktop.png</code> , 1264 × 1254 full page.	Captured
Authenticated overview	<code>/en/dashboard/purchases</code> after login.	Blocked
Authenticated register	<code>/en/dashboard/purchase-orders</code> .	Blocked
Authenticated detail	<code>/en/dashboard/purchase-orders/[id]</code> .	Blocked
French render	<code>/fr/dashboard/purchase-orders</code> .	Blocked

The screenshot verifies only the authentication boundary and public first impression. It is not evidence of purchase-page responsiveness or workflow behavior.

3. Focused test commands and results

Purchase routes and register component

```
node node_modules/jest/bin/jest.js --runInBand --runTestsByPath `
  "app/[locale]/(dashboard)/dashboard/purchases/__tests__/page.test.tsx" `
  "app/[locale]/(dashboard)/dashboard/purchases/__tests__/route-audit.test.ts" `
  "app/[locale]/(dashboard)/dashboard/purchase-orders/__tests__/page.test.tsx" `
  "app/[locale]/(dashboard)/dashboard/purchase-orders/__tests__/route-audit.test.ts" `
  "app/[locale]/(dashboard)/dashboard/purchase-orders/new/__tests__/page.test.tsx" `
  "app/[locale]/(dashboard)/dashboard/purchase-orders/[id]/__tests__/page.test.tsx" `
  "components/ui/groups/purchase-orders/__tests__/PurchaseOrderManagement.test.tsx"
```

Result: **PASS — 7 suites, 18 tests, 0 snapshots, 19.555 seconds.**

Important caveat: `purchases/__tests__/page.test.tsx:230-233` names the root route “legacy overview” and expects `NEXT_NOT_FOUND`. This proves code/test agreement, not acceptable product behavior.

Purchase services and control gates

```
node node_modules/jest/bin/jest.js --runInBand --runTestsByPath `
  "services/purchase-order/__tests__/purchase-order.service.test.ts" `
  "services/purchase-order/__tests__/purchase-order-receive-batch.service.test.ts" `
  "services/purchase-order/__tests__/purchase-order-analytics.service.test.ts" `
  "scripts/__tests__/purchasing-ap-consolidation-gate.test.js" `
  "scripts/__tests__/ap-fraud-control-readiness.test.js" `
  "scripts/__tests__/report-trust-export-gate.test.js"
```

Result: **PASS — 6 suites, 336 tests, 0 snapshots, 139.412 seconds.**

4. Dated static/runtime gate evidence

The following read-only evidence files are included under `evidence/` for review. Their assertions are narrower than the purchase UI audit.

Gate	Dated result	Interpretation
Purchasing/AP consolidation	Ready — 11/11, 0 blockers	Confirms control seams including maker-checker and atomic goods receipt; explicitly not supplier, bank, tax, or statutory certification.
Service boundary	Pass — 0 active violations	Confirms no active direct Prisma/action-owned mutation violations in the scanned app/action/component/hook runtime boundaries.
AP fraud control	Ready — 9/9, 0 critical gaps	Confirms supplier bank/payment approval/release boundary checks; adjacent to, not proof of, the purchase UI.

Gate	Dated result	Interpretation
Workflow assurance runtime tables	Ready — 7/7 tables, 3/3 migration rows	Confirms runtime persistence structures; not proof the purchase page emits complete lifecycle events.
Inventory boundary	Fail — 1 active violation	<code>scripts/supplier-po-ack-e2e-fixture.js:195</code> directly creates an inventory level. It is a test-fixture boundary defect, not evidence that canonical goods receipt bypasses inventory controls. It remains unresolved and must not be hidden.

Included files:

- `evidence/purchasing-ap-consolidation-readiness.md` and `.json`
- `evidence/service-boundary-readiness.md` and `.json`
- `evidence/ap-fraud-control-readiness.md` and `.json`
- `evidence/workflow-assurance-runtime-readiness.md` and `.json`
- `evidence/inventory-boundary-readiness.md` and `.json`

5. Source evidence map

Concern	Primary evidence
Broken overview	<code>purchases/page.tsx:186-214</code> ; <code>test :230-233</code> ; <code>sidebar :265</code> ; <code>dashboard links</code>
Shadow detail/ghost actions	<code>purchases/page.tsx:69-93</code> ; <code>purchases/[id]/page.tsx:67-91</code>
Currency mismatch	<code>register :130,159,178</code> ; <code>management :860-863</code> ; <code>organization schema :248</code> ; <code>analytics service :1265,1530</code>
Action permission mismatch	<code>route read permission</code> ; <code>status-only component actions</code> ; <code>server action permissions</code> <code>purchaseOrderSystemAction.ts:139-230</code>
Receive deep link	<code>management :777-779</code> ; <code>detail state :192-196</code>
Invalid Force Complete	<code>detail :945-975</code> ; <code>transition map service :67-78</code>
Unbounded/duplicate data	<code>service :34-61,470-477</code> ; <code>server page :97-99</code> ; <code>management :648-661</code> ; <code>unused form-option props</code>
Export control	<code>management :824-852</code> ; <code>server action :319-322</code> ; <code>service export :1637-1656</code>
Lifecycle evidence	<code>service transition/cancel :707-809</code> ; <code>status history :1611-1634</code> ; <code>detail history :1620-1658</code>
Archive wording	<code>management :806</code> ; <code>action :172-183</code>
Localization	<code>hard-coded strings across management/detail/create</code> ; <code>fixed formatters</code>
Work-queue gaps	<code>management search/column menu :520-565</code> ; <code>selection-only count :568-572</code> ; <code>empty state :626</code>

Concern	Primary evidence
Accessibility markup	management :317-339, 750-761
Error/concurrency	legacy detail catch/notFound :206-214 ; ID-only updates in service; no record-version conflict contract found
AP navigation permission	sidebar :278 ; purchase payables route access contract
Ignored PO number	create form requires/submits poNumber ; new page server action omits it

6. Architecture evidence map

Graph	Community/node evidence	Relevance
graph_app.json	Register 143; canonical detail 225; root purchases 46; shadow detail 48; AP workbench/history 145/146	Confirms multiple independently owned route clusters.
graph_components.json	Management 58; modern detail 135; AP workbench 25; AP history 7	Confirms register/detail and AP presentation are separate component communities.
graph_actions.json	PO system actions 2; goods receipt/summary 68; AP action 26	Confirms a substantial service/action foundation exists below fragmented pages.
graph_hooks.json	Recent PO queries/actions 0	Highlights a central client mutation/query dependency and potential blast radius.
GRAPH_REPORT_actions.md	PO action community contains 26 nodes	Supports targeted, not wholesale, action-contract remediation.
GRAPH_REPORT_hooks.md	usePurchaseOrderActions() has 11 edges	Permission/error/transition changes require focused hook regression coverage.

7. Required follow-up evidence before implementation can be called complete

1. Obtain explicit authorization to use a safe local authenticated fixture or have the user provide an already authenticated session.
2. Capture overview/register/detail at 1440 × 900, 834 × 1112, and 412 × 915 in EN and FR.
3. Exercise read-only status/action visibility for buyer, approver, receiver, and read-only roles.
4. Use isolated test data to exercise create, submit, approve, partial receipt, receipt, complete, cancel, archive, failure, and concurrency paths.
5. Run keyboard, semantic, contrast, zoom/reflow, reduced-motion, and automated accessibility checks.
6. Establish a representative large-tenant dataset and record query plans, counts, payload, and latency without resetting shared data.
7. Repeat focused tests plus typecheck/lint/build on a controlled implementation branch, separating pre-existing dirty-worktree failures.

8. Audit safety record

- No production code, schema, configuration, dependencies, or application data were changed.
- No destructive database operation, migration, reset, reseed, purchase mutation, external message, or export was executed.
- Existing unrelated worktree changes were not reverted or rewritten.
- New files are confined to `docs/purchase-enterprise-grade-audit/`.
- Findings distinguish confirmed source/test evidence from runtime-blocked or inferred behavior.
