

STOQUIFY / AQSTOQFLOW

Stoquify Procure-to-Pay Verification Ledger

Evidence-first enterprise procure-to-pay review

17 August 2026

Audit planning • No legal, tax, accounting, security, accessibility, or release certification

Date: 2026-08-17 Mode: read-only/static verification; generated reports redirected into the audit evidence folder Result: **8 checks passed; 1 release gate failed with one active inventory-boundary violation**

Preservation approach

The package scripts for several gates normally write to what-next. To preserve the dirty worktree and existing generated evidence, equivalent fail-mode Node commands were executed with output paths redirected to docs/purchase-enterprise-grade-audit/evidence. No migration, reset, reseed, supplier payment, provider call, or runtime business mutation was performed.

Exact results

Purchasing/AP consolidation

Command:

```
node scripts/purchasing-ap-consolidation-gate.js --mode fail --out
docs/purchase-enterprise-grade-audit/evidence/purchasing-ap-consolidation-readiness.md --json-out
docs/purchase-enterprise-grade-audit/evidence/purchasing-ap-consolidation-readiness.json
```

Result: PASS, exit 0. Checks ready: 11/11. Blockers: 0.

AP fraud controls

Command:

```
node scripts/ap-fraud-control-readiness.js --mode fail --out
docs/purchase-enterprise-grade-audit/evidence/ap-fraud-control-readiness.md --json-out
docs/purchase-enterprise-grade-audit/evidence/ap-fraud-control-readiness.json
```

Result: PASS, exit 0. Checks ready: 9/9. Gaps: 0.

Inventory boundary

Command:

```
node scripts/inventory-boundary-gate.js --mode fail --out
docs/purchase-enterprise-grade-audit/evidence/inventory-boundary-readiness.md --json-out
docs/purchase-enterprise-grade-audit/evidence/inventory-boundary-readiness.json
```

Result: **FAIL, exit 1**. Active violations: 1. Allowed kernel/test findings: 27. The active violation is scripts/supplier-po-ack-e2e-fixture.js:195, inventoryLevel.create, classified SCRIPT_STOCK_MUTATION because a runtime-like script must use the stock-event kernel or be explicitly and safely classified seed-only.

Service boundary

Command:

```
node scripts/service-boundary-gate.js --mode fail --out
docs/purchase-enterprise-grade-audit/evidence/service-boundary-readiness.md --json-out
docs/purchase-enterprise-grade-audit/evidence/service-boundary-readiness.json
```

Result: PASS, exit 0. Active service-boundary violations: 0. Allowed test/mock/service findings: 13.

Workflow-assurance runtime tables

Command:

```
node scripts/workflow-assurance-runtime-table-check.js --mode fail --out
docs/purchase-enterprise-grade-audit/evidence/workflow-assurance-runtime-readiness.md --json-out
docs/purchase-enterprise-grade-audit/evidence/workflow-assurance-runtime-readiness.json
```

Result: PASS, exit 0. Runtime tables: 7/7. Migration rows: 3/3. This was a read-only database metadata check; it did not apply migrations.

Prisma schema

Command:

```
npm run prisma:validate
```

Result: PASS, exit 0. Prisma reported that prisma/schema.prisma is valid.

TypeScript

Command:

```
npm run typecheck
```

Result: PASS, exit 0. tsc --noEmit completed without diagnostics.

Attached-prompt exact Jest path set

Command:

```
npx jest --runTestsByPath services/purchase-order/__tests__/purchase-order.service.test.ts
services/purchase-order/__tests__/purchase-order-receive-batch.service.test.ts
actions/purchaseOrderWorkflow/__tests__/purchaseOrderSystemAction.test.ts
services/purchasing/__tests__/ap-control.service.test.ts actions/purchasing/__tests__/ap-control.actions.test.ts
services/purchasing/__tests__/ap-history.service.test.ts --runInBand
```

Result: PASS, exit 0. Test suites: 6/6. Tests: 45/45. Snapshots: 0.

Additional audit-focused Jest set

Command:

```
npx jest services/purchase-order/__tests__/purchase-order.service.test.ts
services/purchasing/__tests__/ap-control.service.test.ts actions/purchasing/__tests__/ap-control.actions.test.ts
services/inventory/__tests__/inventory-stock-event.service.test.ts
scripts/__tests__/purchasing-ap-consolidation-gate.test.js scripts/__tests__/ap-fraud-control-readiness.test.js
--runInBand
```

Result: PASS, exit 0. Test suites: 6/6. Tests: 50/50. Snapshots: 0.

Interpretation

Static purchasing/AP and fraud controls are strong, the protected service boundary is clean, required workflow-assurance tables are present, schema/type checks pass, and both focused test selections pass. This does not cancel the inventory gate failure and does not prove the proposed receipt-concurrency, inspection, GRNI, match-exception, return/credit, document-storage, browser, accessibility, migration, or provider behaviors. Those remain explicit implementation and release gates.
