

Stoquify Agent Runtime Skills 016 and 017 Rerun Report

Date: 2026-07-25
Active boundary: Agent Runtime Phase 2A, deterministic read-only Command Agent
Activation state: Disabled
Phase 3: Not authorized
Order executed: 016-aqstoqflow-ai-copilot-guardrails , then 017-aqstoqflow-enterprise-release-gate

Executive Decision

Skill 016 passes for the implemented Phase 2A boundary. The Command Agent is tenant-scoped, role-aware, evidence-backed, freshness-qualified, redaction-safe, read-only, auditable, reversible, and structurally unable to post, pay, file, approve, mutate stock, alter payroll, certify close, or change access.

Skill 017 rejects internal activation and Phase 3 advancement. The repository-controlled implementation is credible, but promotion still lacks real approvals, accepted owner coverage, an immutable clean-commit CI identity, a deployed scheduler, production-like alert acknowledgement, and completed credential rotation/revocation evidence.

Independent release decision: REJECTED / NO-GO - HIGH-AUTHORITY EVIDENCE GAPS REMAIN

Evidence Inspected

- Skill 016 and 017 instructions and their universal-gate blueprints
- Ordered implementation and technical-specification artifacts at their repository locations
- graphify-out/GRAPH_REPORT.md
- Agent Runtime schema, migrations, services, actions, UI, browser harness, and release controls
- Final sanitized enabled-pilot certificate and PostgreSQL package state
- Credential-rotation machine register and fail-closed validator
- Final activation-gate blocker-closure report

Skill 016: AI Copilot Guardrails

Selected skill: 016-aqstoqflow-ai-copilot-guardrails

Gate Result

Guardrail	Result	Evidence
Shared architecture	Passed	One TypeScript-native runtime under services/agents
Tenant and actor scope	Passed	Trusted context, tenant-scoped persistence, cross-tenant denial
RBAC and module authorization	Passed	Protected action and pre-tool permission/module filtering
Read-only authority	Passed	Prohibited-action gate; no business-write delegate
Evidence grounding	Passed	Evidence links, grades, source modules, hashes, blockers, limitations
Freshness	Passed	Fresh, stale, partial, blocked, failed, empty, and unknown states
Redaction	Passed	Field policy plus sensitive-string canary before UI output
Safe errors	Passed	Typed release/definition/runtime errors and non-leaking action mapping
Idempotency and replay	Passed	Scoped correlation identity and existing-receipt replay

Guardrail	Result	Evidence
Audit and observability	Passed locally	Runs, steps, evidence, feedback, Workflow Assurance, correlation IDs
UI trust states	Passed locally	Loading, empty, error, unavailable, stale/partial, retry, bilingual, keyboard, accessibility
Unsafe autonomous actions	Structurally blocked	No posting, payment, filing, approval, payroll, stock, close, or permission authority

Verification Result

PASSED for the implemented deterministic Phase 2A boundary.

Next Recommended Numbered Skill

`017-aqstoqflow-enterprise-release-gate`

Skill 017: Enterprise Release Gate

Selected skill: `017-aqstoqflow-enterprise-release-gate`

Universal Gate Matrix

Gate	Local repository result	Promotion result
A. Architecture and context	Passed	Passed
B. Tenant, RBAC, and module control	Passed	Passed
C. Event and ledger integrity	Passed for read-only scope; no business event or posting exists	Passed for Phase 2A
D. Error and notification contract	Passed locally	Production alert ownership still blocked
E. UX completeness	Passed locally on desktop/mobile	Production-like rollback surface still pending
F. Evidence and observability	Passed locally	Managed transport, acknowledgement, and escalation blocked
G. Verification	Repository suite passed	Clean-commit CI/deployment identity blocked

Verified Evidence

Verification	Result
Enabled-pilot Playwright	14/14 passed; zero skipped, flaky, or unexpected
New degradation cases	Manifest mismatch, expired approval, expired owner coverage
Other degradation cases	DRAFT, role scope, second tenant, suspension
Protected business data	Before/after fingerprint identical
Allowed persistence	Runs +2, steps +4, evidence +20, feedback +2, costs/incidents +0
Final package	PILOT_CERTIFIED ; activatedAt null; zero ACTIVE_INTERNAL packages
Sanitized report	Stored certification hash matches; raw report deleted
Full Jest	467 suites passed, 3 skipped; 2,785 tests passed, 15 skipped
TypeScript	Passed
Production build	Passed with valid post-build output
Service boundary	0 active violations
Raw-error boundary	0 active unsafe findings; 88 reviewed classifications
Agent runtime gates	Tool registry, prohibited action, release control passed
PostgreSQL scheduler smoke	Overlap, replay, conflict, stale lease, failure, cleanup passed
Prisma	Valid; 34 migrations current; safety 8/8, zero destructive findings
CI configuration readiness	11/11 repository checks ready
Credential register	15 classes, no values retained
Credential rotation release gate	Correctly blocked with 17 missing security-evidence items

High-Authority Blockers

1. Distinct real product and security approval decisions are absent.
2. Real rollout, rollback, support, pilot, security-incident, and backup owners have not accepted coverage.
3. No authorized clean commit, immutable CI run, deployment artifact, or branch-protection evidence exists.
4. The five-minute reconciler is implemented but not deployed; three real successful windows are absent.
5. Managed production-like alert delivery, owner acknowledgement, escalation, and rollback evidence are absent.
6. Credential classification, rotation, workload restart, old-version revocation, and rejection evidence remain incomplete.
7. Global statutory release evidence still lacks the required source artifact hash and expert approval.

These blockers cannot be closed by test fixtures, E2E identities, local environment variables, inferred names, or generated approvals.

Verification Result

REJECTED / NO-GO

No agent was activated, no release entered **ACTIVE_INTERNAL**, and no Phase 3 implementation was authorized.

Next Recommended Numbered Skill

Remain on **017-aqstoqflow-enterprise-release-gate**. Rerun it only after the real governance, deployment, alert, rotation, clean-commit CI, and statutory evidence is complete. Do not advance to another numbered implementation skill.
