

Stoquify Landing Page Skill Suite Report

Date: 2026-07-19

Prompt saved at:

- `docs/landing_page/STOQUIFY_LANDING_PAGE_SKILL_SUITE_PROMPT_2026-07-19.md`

Generated suite folder:

- `docs/landing_page/skills-suite/`

Result

The 9+ landing-page roadmap has been transformed into a docs-only Codex skill suite for future Stoquify landing-page transformation work. The suite is designed to be useful to senior UI/UX specialists, frontend engineers, product strategists, accessibility reviewers, trust/security reviewers, localization reviewers, and SaaS growth practitioners.

No landing-page implementation files were changed in this run.

Source Evidence

Primary source:

- `docs/landing_page/STOQUIFY_LANDING_PAGE_9_PLUS_ROADMAP_2026-07-19.md`

Supporting sources:

- `what-next/STOQUIFY_LANDING_PAGE_COMPETITIVE_REVIEW_2026-07-19.md`
- `docs/landing_page/STOQUIFY_LANDING_PAGE_COMPETITIVE_REVIEW_2026-07-19.pdf`
- `app/[locale]/(home)/page.tsx`
- `components/landing/*`
- `messages/en.json`
- `messages/fr.json`
- `what-next/ui-ux/`
- landing browser-smoke and test scripts under `scripts/`

Generated Files

Suite documentation:

- `docs/landing_page/skills-suite/README.md`

- docs/landing page/skills-suite/skill-suite-map.md

Core skills:

- docs/landing page/skills-suite/stoquify-landing-00-orchestrator/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-01-positioning-clarity/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-02-cta-conversion-flow/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-03-proof-trust-claims/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-04-information-architecture/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-05-ui-visual-system/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-06-accessibility-performance/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-07-localization-ohada/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-08-implementation-release-gate/SKILL.md

Useful optional skills:

- docs/landing page/skills-suite/stoquify-landing-09-seo-growth-experiments/SKILL.md
- docs/landing page/skills-suite/stoquify-landing-10-product-pages-expansion/SKILL.md

Skill Suite Summary

Skill	Purpose
stoquify-landing-00-orchestrator	Coordinates roadmap execution, phase order, evidence, and go/no-go discipline
stoquify-landing-01-positioning-clarity	Sharpens hero/category clarity around POS, inventory, and OHADA accounting
stoquify-landing-02-cta-conversion-flow	Aligns CTAs, sales motion, public-to-auth transitions, and conversion goals
stoquify-landing-03-proof-trust-claims	Governs proof, public claims, sample/demo labels, screenshot provenance, and trust language
stoquify-landing-04-information-architecture	Simplifies page structure, buyer pathways, progressive disclosure, and module density
stoquify-landing-05-ui-visual-system	Preserves premium visual identity while improving hierarchy, screenshots, and responsive polish
stoquify-landing-06-accessibility-performance	Enforces WCAG, keyboard, reduced-motion, text-fit, screenshots, production rendering, and performance budgets
stoquify-landing-07-localization-ohada	Protects EN/FR parity, French quality, OHADA/SYSCOHADA accuracy, and overclaim prevention

Skill	Purpose
stoquify-landing-08-implementation-release-gate	Certifies focused implementation slices with tests, build, smoke, screenshots, and blocker reporting
stoquify-landing-09-seo-growth-experiments	Covers analytics, SEO, content clusters, privacy-safe measurement, and controlled experiments
stoquify-landing-10-product-pages-expansion	Moves deep module detail into public product pages after homepage clarity is fixed

Multi-Agent Review Integration

Specialist sidecar agents contributed additional criteria, which were incorporated into the suite:

- UX architecture review strengthened first 3 viewport rules, capped primary navigation guidance, progressive disclosure, visual hierarchy, responsive screenshot criteria, and public-to-auth journey review.
- Product strategy review strengthened positioning, buyer pathways, CTA coherence, proof hierarchy, adoption-flow clarity, conversion measurement, and P0 scope discipline.
- Accessibility review strengthened WCAG 2.2 AA, keyboard-only operation, reduced-motion behavior, 200%/400% zoom text fit, EN/FR screenshot gates, and production performance budgets.
- Security architecture review strengthened public claim inventory, visual data classification, protected-route transition rules, privacy-safe analytics, compliance-language restrictions, RBAC/trust evidence mapping, and OHADA/SYSCOHADA overclaim prevention.

Roadmap Coverage

The suite maps to all roadmap phases:

- P0: hero clarity, CTA honesty, proof boundaries, sample labels, public-to-auth safety, density compression, production baseline.
- P1: buyer pathways, OHADA-ready workflow visual, product proof, security/privacy/compliance trust path, adoption clarity, use-case compression, analytics event map.
- P2: dedicated product pages, guided demo, case studies/advisor proof, performance budgets, Francophone OHADA copy polish, SEO/content clusters.
- P3: A/B tests, ROI/close-risk calculator, country/industry variants, accountant/partner hub.

Quality Gates Added

The suite blocks 9+ status unless these conditions are met:

- First-time visitors can identify the category in 5-10 seconds.
- CTAs match the real sales motion.
- Public-to-auth transitions do not create confusing dead ends.

- Every public proof claim has owner, source file, approval status, locale coverage, and review/expiry date.
- Public visuals are classified as real, redacted, sample, demo, or mockup.
- Sample/demo data is visibly labeled.
- Unsupported wording such as certified, guaranteed, legally compliant, or tax-approved is blocked unless evidence and approval exist.
- EN/FR copy preserves meaning and text fit.
- WCAG 2.2 AA review has zero Critical/Serious issues before release signoff.
- Keyboard, reduced-motion, responsive screenshot, production build, and performance gates pass or have documented remediation.
- Analytics events contain no personal, tenant, customer, payroll, payment, receipt, or financial payloads.

Validation Performed

Created all required suite files plus two optional skills that directly correspond to the P2/P3 roadmap:

- SEO/growth experiments
- product pages expansion

The generated skill frontmatter uses lowercase hyphenated names and descriptions tailored to trigger the right landing-page task.

Structural checks completed:

- Confirmed all `SKILL.md` files include frontmatter, mission, evidence, workflow, acceptance criteria, verification, and risk controls.
- Confirmed the suite contains guardrails for unsupported proof, sample/demo data, OHADA/SYSCOHADA, CTAs, route smoke, screenshots, WCAG, protected-route transitions, and privacy.

Codex quick validation:

- All 11 generated skill folders passed `quick_validate.py`.

Recommended Next Action

Run the orchestrator skill for the P0 landing focus pass:

Use ``docs/landing page/skills-suite/stoquify-landing-00-orchestrator/SKILL.md`` to plan and execute only the P0 landing-page transformation. Do not implement P1/P2/P3 yet. Preserve OHADA/SYSCOHADA specificity, reduce first-page density, align CTA intent, label sample data, clean public-to-auth transitions, and save verification evidence under ``what-next/ui-ux/``.

Notes

The suite is intentionally saved as documentation under `docs/landing page/skills-suite/`. It has not been installed into the global Codex skills folder. Install it only after review and explicit approval.
