

Stoquify Referral-Worthy Skill Suite Installation Report

Generated: 2026-07-17

Scope

This run executed the skill-suite creation prompt from `C:/Users/J COMPUTER/.codex/attachments/c206f02d-d989-473d-8e52-e83369ff49b5/pasted-text.txt` against `docs/referrals/stoquify-referral-worthy-war-plan-report.md`.

The executed prompt was saved as `docs/referrals/stoquify-referral-worthy-skill-suite-installation-prompt.md` with a matching PDF copy.

The run created execution machinery only. No Stoquify product features or application code were implemented.

Source Evidence Inspected

Created Or Updated Skills

Skill	Trigger	Validation	Purpose
stoquify-referral-war-room-orchestrator	/stoquify-referral-war-room	pass	Coordinate the full referral-worthy roadmap across phases, skills, status registers, reports, and verification gates without implementing product features directly.
stoquify-daily-truth-command-center	/stoquify-daily-truth	pass	Create the owner morning and manager end-of-day operating truth loop using service-owned read models before UI surfaces.
stoquify-cash-leakage-radar	/stoquify-leakage-radar	pass	Detect and route money-protection exceptions as reviewable evidence-backed cases, not unsupported accusations.
stoquify-accountant-close-portal	/stoquify-accountant-close	pass	Turn monthly close into an accountant-led referral channel while preserving tenant-scoped access, evidence, and redaction.
stoquify-statement-proof-network	/stoquify-statement-network	pass	Create safe external proof surfaces for customers and suppliers that improve collections and generate organic referrals.
stoquify-inventory-loss-control	/stoquify-inventory-loss	pass	Ensure stock value cannot disappear without traceable reason, approval, evidence, and loss analytics.
stoquify-compliance-readiness-calendar	/stoquify-compliance-readiness	pass	Turn tax, payroll, OHADA close, declaration, license, and social contribution anxiety into reviewed readiness workflows.
stoquify-financing-passport	/stoquify-financing-passport	pass	Convert trusted operating data into controlled financing readiness proof while avoiding overclaims.
stoquify-copilot-whatsapp-ops	/stoquify-copilot-whatsapp	pass	Accelerate trusted workflows through AI and WhatsApp without making either channel a source of truth.
stoquify-referral-proof-artifacts	/stoquify-proof-artifacts	pass	Make every external proof artifact professional, safe, auditable, and capable of creating measurable referrals.

Status Register

Created what-next/referrals/REFERRAL_WAR_ROOM_STATUS.md with the phase register and first runnable phase.

Validation Summary

- Skills initialized with skill-creator/scripts/init_skill.py where exact folders did not already exist.
- Each SKILL.md was replaced with roadmap-specific instructions after initialization.
- Each skill was validated with skill-creator/scripts/quick_validate.py .
- Manual section checks verified trigger, evidence, workflow, artifacts, verification commands, risk controls, success criteria, non-goals, and handoff instructions.

Detailed validation JSON: docs/referrals/stoquify-referral-worthy-skill-suite-validation.json

Validation Results

Skill	quick_validate exit	Manual section check	Missing sections
stoquify-referral-war-room-orchestrator	0	pass	none
stoquify-daily-truth-command-center	0	pass	none
stoquify-cash-leakage-radar	0	pass	none

Installed Skill Suite Order

1. stoquify-referral-war-room-orchestrator
2. stoquify-daily-truth-command-center
3. stoquify-cash-leakage-radar
4. stoquify-accountant-close-portal
5. stoquify-statement-proof-network
6. stoquify-inventory-loss-control
7. stoquify-compliance-readiness-calendar
8. stoquify-financing-passport
9. stoquify-copilot-whatsapp-ops
10. stoquify-referral-proof-artifacts

First Recommended Skill To Run

Run `stoquify-referral-war-room-orchestrator` first with `/stoquify-referral-war-room`.

Its first job is to open Phase 0, refresh the status register, select the first narrow implementation slice, and route the work to `stoquify-daily-truth-command-center` only after the service-owned truth foundation is scoped.

Guardrails Preserved

- Product feature implementation was intentionally not started.
- Existing related skills were referenced, not overwritten.
- Each new skill requires service-owned truth, evidence links, RBAC, redaction, audit, and focused verification.
- WhatsApp and AI copilot are explicitly delivery/guidance layers, not sources of truth.
- External sharing skills require signed tokens, expiry, revocation, redaction, and view logs.

Residual Risks

- The new skills become available to future turns after the environment refreshes its skill list.
- The suite is intentionally instruction-first; the first implementation run should still inspect live code before changing application files.
- Forward-testing with subagents was not performed in this run to keep scope bounded and avoid generating extra artifacts.

Next Step

Start the actual roadmap execution with `/stoquify-referral-war-room`.
