R00 evidence and open items

R00 EVIDENCE | Revision 1.0 | 7 October 2026

Organization or project legal owner: _____

The delivery lead maintains this checklist and the associated structured decision data. It records progress and missing evidence; it cannot supply a human approval. Store private supporting records outside the public repository.

Check	Evidence needed before acceptance
Scope and baseline	Exact candidate/baseline, migration/toolchain references, cohort, currencies, modules, exclusions and existing findings. [S2, S3]
Decisions	Each D01–D08 has a selected decision or valid bounded deferral, rationale, owner, due gate and evidence location.
People	Verified names, appointments, authority scope, qualification where needed, acceptance and independence assessment.
Decision recording	Exact revision and reviewed evidence; authentic decision outcome; signing and verification records; conditions and restrictions.
Acceptance scenarios	For every in-scope capability, identify the workflow/test/example that would demonstrate success and the responsible reviewer.
Records integrity	All links resolve; signed records are private and preserved; supersession/revocation does not overwrite original history.
R00 review	Delivery lead prepares; product owner and QA lead assess the complete scope/owner/decision evidence. R00 remains PARTIAL until acceptance is actually met.

Current evidence limits

October 7 engineering evidence records 59 focused tests, four isolated PostgreSQL tests, targeted lint and full typecheck passing. That does not qualify the full product. Shared leave-balance concurrency, authenticated browser workflows, integrated build/package, recovery and statutory validation remain open. [S3]

Statuses used in this pack

Templates: DRAFT / AWAITING HUMAN VALIDATION. Unmade decisions and identities are null in decision-data.json. Future outcomes must be supported by real records; conditional or deferred items retain their restrictions. Canonical R00 stays PARTIAL and humanAssignment stays UNCONFIRMED until verified updates are justified.

Unresolved decisions and completion review

Item	Still needed	Owner and due gate
D01	Initial segment, locations, currencies, enabled modules and capability promises	Product owner + delivery lead R00 before the release-scope baseline; R33 still controls actual release. Named person/date: _____
D02	Functional currency, rate/rounding, partial-year, close and year-end policies	Accounting owner + qualified accountant R02, R06, R07 and R20 before financial implementation acceptance. Named person/date: _____
D03	Offline devices, storage/eviction, supported tenders, fiscal limits and recovery	POS/product + security + country owner R04/R05 design; finalize before R32 offline admission. Named person/date: _____
D04	Role matrix, legal holds, retention and HR/workforce disclosure	Privacy/records + HR + AppSec R08, R10, R16 and R28 before enforcement acceptance and sensitive launch. Named person/date: _____
D05	Named country experts, rule versions, providers and submission authority	Country/integration leads + business approvers Begin appointments at R00; complete per capability at R18/R19 before activation. Named person/date: _____
D06	Which optional lot/landed-cost/assets/budget/cohort features are required	Product + actual customer + domain owner R34–R37 before committing implementation capacity; earlier if promised to the first cohort. Named person/date: _____
D07	Deployment workload, latency, error, backlog, cost, RPO/RTO and alert objectives	SRE + product + finance R23/R30 before measuring operational acceptance against agreed limits. Named person/date: _____
D08	Pilot cohorts, minimum volume, business-cycle coverage and observation window	Release owner + pilot operations Before R32/R33; criteria must not be invented after results. Named person/date: _____

For each open item add: secure evidence reference, missing action, named responsible person, target date, operating restriction, resolution evidence and reviewer. Reuse this row structure in the structured register rather than marking an empty field approved.

R00 review conclusion: [ ] Continue preparation [ ] Request revision [ ] Recommend acceptance for stated scope
Prepared by/date: _____ Product/QA review references: _____
Unresolved restrictions: _____

No R00 conclusion bypasses R18/R19 country/provider gates, R31 release evidence, R32 offline pilot requirements or R33 release authority. A later final release decision must identify the exact candidate and permitted cohort/capabilities.

Capability and open item worksheet

Copy this page for each in-scope capability or unresolved condition. Use separate entries for online, offline, accounting and HR/payroll cohorts. This links your choices to the evidence required by R00.

Field	Your entry
Decision and package IDs	D___ / R___ _____
Capability and module	_____
Country provider and customer cohort	_____
Operating boundary	[ ] Demo [ ] Proposed pilot [ ] Future release [ ] Excluded
Named accountable owner	_____
Required authority and reviewer	_____
Acceptance scenario and expected result	_____ _____
Evidence location version and date	_____ _____
Missing decision or evidence	_____
Remediation owner and due date or gate	_____
Restriction until resolved	_____
Resolution evidence and reviewed date	_____
Status and linked decision record	_____

Baseline binding for this scope: commit/revision _____
Relevant uncommitted files/manifest _____
Migration/toolchain evidence reference _____
Known findings and changed-evidence triage _____
