Five baguettes per 60 × 40 cm tray — proposed fit test

Five lanes; trial finished width up to 6 cm. Check usable rims, expansion and airflow.

16 usable trays × 5 pieces = 80 per load. If only four pieces fit, replan for 64 per load.

Normal programme: five 80-piece loads, 45 minutes apart

First mix 02:20; final packing release 09:28. Local bakery time; all durations provisional.

The higher-output case adds five loads at the same cadence. Dispatch uses a separate vehicle schedule.
