Bakery booklet — source and editorial record

Edition: 3 October 2026. Discovery window: 4 September–3 October 2026 inclusive, using local modification dates and dated bakery conversation context.

Deliverables and coverage

The integrated handbook contains 104 primary recipe/component/trial cards: 75 October cards, 28 September cards and the user's cake-donut trial. Chapter 11 contains eight groups of earlier formulas, meaningful alternatives and incomplete concepts. This count includes bases and assembly cards; it is not a claim of 104 distinct finished products. The initial Word-rendered PDF had 165 pages. The final bakery-folder edition has been expanded and repaginated by the requested report publisher.

The 27 discovered files include published Markdown/PDF pairs, earlier iterations and one byte-identical duplicate. They are not 27 independent research sources. Coverage means all identified product families and substantive operational ideas were accounted for; it does not mean every sentence, superseded range or repeated table was reprinted.

Discovery boundary

Searched the current project bakery folders, bakery working folders identified from recent related chats, relevant Downloads, accessible Google Drive and Pages. Google Drive and Pages searches returned no additional in-window bakery sources. Read the "Reduce cracks in cake donuts", "new bakery recipes" and "bakery innovations" discussions for source locations and requested context. No unrestricted search of every private drive/account is claimed. Local file modification dates may reflect downloading or regeneration rather than original authorship.

The pasted prompt is an instruction, not recipe evidence. Older unrelated software/technology material was excluded. No supplier was contacted; no purchases, messages, uploads or publishing were performed.

Source register

SRC01 — Nkambe_Bakery_Business_and_Production_Plan.md

Earlier manual iteration; overlapping recipes superseded by SRC05/SRC08, distinct concepts retained in V02/V03.

SRC15 — Bakery_Empire_Master_Operations_Manual (1).pdf

Path: `C:\Users\J COMPUTER\Downloads\Bakery_Empire_Master_Operations_Manual (1).pdf`

Modified: 2026-09-11T17:54:08.916317 | SHA-256: `46a528981a7b8d2a0ad93a0d12e12eee374c70e345df7c9de4ee740ac240b501`

Early condensed manual; cocoa-banana frozen formula preserved in V02; general portfolio and scheduling ideas consolidated.

SRC16 — Bakery_Empire_Master_Operations_Manual (2).pdf

Path: `C:\Users\J COMPUTER\Downloads\Bakery_Empire_Master_Operations_Manual (2).pdf`

Modified: 2026-09-11T17:56:41.168424 | SHA-256: `932b0e956856e9421f11a71c2fa2a862b50407d87f283486b1b7482eb3205e3a`

24-product earlier formulation manual; specialist bread/pastry/frozen formulas preserved or mapped in V02, with later complete versions preferred.

SRC17 — Bakery_Empire_Master_Operations_Manual.md

Path: `C:\Users\J COMPUTER\Downloads\Bakery_Empire_Master_Operations_Manual.md`

Modified: 2026-09-11T17:52:44.908908 | SHA-256: `bd9ffdd707fe608bab36c72360a290be418df67e27e8b625d61ad94a861007b6`

Earlier operations/formulation manuscript; timeline, staffing, logistics and portfolio consolidated. Conflicting recipe quantities remain development variants, not merged into invented formulas.

SRC18 — Bakery_Empire_Master_Operations_Manual.pdf

Path: `C:\Users\J COMPUTER\Downloads\Bakery_Empire_Master_Operations_Manual.pdf`

Modified: 2026-09-11T17:27:02.758401 | SHA-256:
`1d02155b06ffa4777a41cfdab99a47dc53fcbc8b1aa963c08b1a92063b53fef5`

Early condensed master PDF; repeated bakery portfolio and operational concepts consolidated.

SRC19 — Cameroon_Bakery_Empire_Master_Guide.pdf

Path: `C:\Users\J COMPUTER\Downloads\Cameroon_Bakery_Empire_Master_Guide.pdf`

Modified: 2026-09-11T16:49:45.652618 | SHA-256:

`b70fd7de5432877ead4f1fd31c93885558ed81eb65017b576a0c3136c8c95cb5`

Byte-identical duplicate of SRC22 (same SHA-256); excluded from unique content count.

SRC24 — nkambe_bakery_commercial_blueprint.pdf

Path: `C:\Users\J COMPUTER\Downloads\nkambe_bakery_commercial_blueprint.pdf`

Modified: 2026-10-01T15:03:35.507036 | SHA-256:
`d94a9284d9a0f1b3afff6086a82905254db760e20f86d0121d07c22203679580`

Short commercial blueprint: overlapping equipment/menu ideas consolidated into chapters 3 and 12.

SRC25 — nkambe_bakery_frozen_empire_manual.pdf

Path: `C:\Users\J COMPUTER\Downloads\nkambe_bakery_frozen_empire_manual.pdf`

Modified: 2026-10-01T15:46:15.085825 | SHA-256:
`92fe126e3dfb5c34536374c1f63818d3c4d4fffe048ac038ddd798584e53a100`

Condensed-milk collection preserved in V06; duplicate yogurt-mayo sauce mapped to V04/V07; main O-series supplies more detailed working alternatives.

SRC26 — shawarma_garlic_sauces_recipe.md

Path: `C:\Users\J COMPUTER\Downloads\shawarma_garlic_sauces_recipe.md`

Modified: 2026-10-01T14:51:51.847904 | SHA-256:
`ddbd99adb74bf8e6bec6448fffcd5ddd48ed90b9dd40045e3a3b806dfd7506a0`

Toum and yogurt-mayo variants retained in V07; unmeasured volumes and refrigeration requirements made explicit.

SRC27 — Staggered_Baguette_Production_Schedule.pdf

Path: `C:\Users\J COMPUTER\Downloads\Staggered_Baguette_Production_Schedule.pdf`

Modified: 2026-09-11T14:45:25.992631 | SHA-256:
`e91727846771163e63645761815309a1182bf4f601baf39cb95b67c1b79b17dd`

Staggered baguette schedule consolidated; 45-minute mix starts versus 25-minute oven cycles corrected rather than repeated as guaranteed synchronization.

CHAT01 — Reduce cracks in cake donuts

Chat ID: `01a0e11d-ce55-76c1-ba20-cced9267206a`. User-supplied 6 kg flour formula retained in T01. EDC identity was not confirmed; earlier assumptions about EDC-95 were not adopted. The water and emulsifier comparisons are proposed tests, not completed experiments.

Harmonization decisions

- October equipment information governs the current operating layout; conflicting mixer ratings and missing model plates remain unresolved.
- H01–H05 centralize handling: cold storage target 4°C or below, frozen stock −18°C or colder, hot holding at least 63°C, meat/fish/poultry/cooked-egg cooking and reheating 75°C for 30 seconds. Product-specific milk treatment and yogurt incubation remain separate. External guidance is not represented as Cameroonian law.

- Continuous dairy treatment seconds were not transferred to an ordinary pot. The batch reference remains 69°C/30 minutes in a qualified system; approved ready mix is the fallback.
- A seven-day frozen pilot suggestion was removed as an automatic sale period. No generic commercial juice or yogurt shelf life was invented.
- Current Yogourmet guidance specifies one sachet per litre; the retained 6 g source entry is conditional on verifying the local sachet mass and identity.
- O and S prefixes prevent conflicting B01/P01/F01 identifiers from being mistaken for the same formula.
- O-B32 is identified as a batter-to-baked-sponge component; assembled cake uses baked sponge output.
- O-F07 conservative 12-bar costing is distinguished from the arithmetic maximum of 13 × 70 g from 970 g usable mix.
- Agege improver dose, Shokupan liquid allocation, levain hydration, unidentified stabilizers, unnamed EDC and missing pastry/filling quantities remain visible gaps.
- Koki corn and makabo are not treated as interchangeable raw materials. Avocado antibrowning, garlic/oil sauce, caramel and hot-filled condiments are not described as shelf-stable.
- Solar electricity and residual oven heat are not free operating costs. Supplier and market claims remain hypotheses.
- Generic repeated controls, duplicated publications, historic build logs, unsupported promotional language and superseded prose were consolidated; no source files were edited.

SRC01	O-F07	F07 Mango yogurt frozen bar	Full formula/method retained; common controls harmonized
SRC01	O-F08	F08 Chocolate dipped peanut milk bar	Full formula/method retained; common controls harmonized
SRC08	S-B01	B01 — Daily French-style baguette	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-B02	B02 — Kumba-style soft block loaf	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-B03	B03 — True-butter pain beurre	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-B04	B04 — Sandwich pan loaf / pain de mie	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-B05	B05 — Soft burger buns	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-B06	B06 — Professional 50%-butter brioche	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-B07	B07 — Milk bread finger rolls / pain au lait	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-P01	P01 — Yeast donuts: plain, glazed and beignets sucrés	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-P02	P02 — Yeast puff-puff / beignets farine	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-P03	P03 — Cameroonian cake-style beignets soufflés	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-P04	P04 — Coconut butter biscuits	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-P05	P05 — Banana snack cake	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-P06	P06 — Cinnamon breakfast rolls	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-F01	F01 — Complete beef hamburger	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-F02	F02 — Pain omelette with sardines	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated

Source	Booklet ID	Source title	Disposition
SRC08	S-F03	F03 — Beef-and-cheese filled bread	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-F04	F04 — Chicken shawarma wrap	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-F05	F05 — Vegetable samosas	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-F06	F06 — Mini chicken pizzas	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-D01	D01 — Vanilla dairy soft serve	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-D02	D02 — Scoopable vanilla ice cream	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-I01	I01 — Pineapple-ginger fruit popsicle	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-I02	I02 — Bissap-ginger-lime ice stick	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-I03	I03 — Cocoa milk popsicle	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-I04	I04 — Own-brand premium chocolate-coated ice-cream bar	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-Y01	Y01 — Plain set yogurt	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-Y02	Y02 — Stirred mango yogurt	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
SRC08	S-Y03	Y03 — Vanilla drinking yogurt	Complete formula, yield, method and distinct variants retained; repeated shared text consolidated
CHAT01	T01	Rolled cake donuts	User quantities retained; unresolved EDC identity; controlled comparison

Verification of the initial edition

- 51 September formula total rows independently summed; all passed within 0.1 g display tolerance.
- 42 October base input totals and ×5 production columns independently checked; all passed.
- B36’s separate 1,081 g input was checked against its ingredient table during source review; no ×5 column is claimed for that card.
- All 104 primary IDs appear in both the manuscript and the exported PDF.
- All 27 original file SHA-256 hashes remain unchanged.
- DOCX exported through installed Microsoft Word with updated contents and PDF bookmarks. The canonical LibreOffice renderer could not run because soffice is unavailable; Word provided the actual document layout for PDF review.

- Near-blank PDF pages detected by text screening: none. Broken Word reference fields: none.
- All 165 pages were rendered and reviewed in contact sheets; the cover, preservation comparison, cake-donut trial and dense legacy-formula table were additionally inspected at full-page resolution. No clipping, overlapping text or missing table content was observed in that review. A title-border and running-header colour correction was applied in the final Word export.

These checks verify source accounting, selected arithmetic and document output. They do not establish physical recipe performance, laboratory composition, microbial shelf life, machine capacity, supplier pricing or market demand. October monetary examples were retained as illustrative source calculations; not every financial cell was independently recomputed. The September workbook was read, not recalculated or certified.

Remaining information before commercial release

Actual equipment manuals/nameplates and loads; current ingredient specifications and quotations; culture/stabilizer/improver identities; fruit pH/Brix variability; validated heating/cooling and packing; measured yields and sale weights; laboratory-supported shelf life; local labeling and food-business requirements; real sales and energy data. These are production-validation requirements, not missing booklet pages.

New preservation references

Preservation and process references checked for this edition

N01 — FDA: What You Need to Know About Juice Safety. Untreated juice hazards and whole-fruit hygiene.

N02 — FDA: Juice HACCP Regulator Training and Juice HACCP questions and answers. Product-specific pathogen reduction; United States framework used as a technical reference only.

N03 — National Center for Home Food Preservation: Freezing and Freezing citrus fruit and juice. Freezing principles and packaging; domestic guidance is not a commercial shelf-life validation.

N04 — University of Guelph: Pasteurization of Mix. Batch ice-cream mix treatment reference, 69°C for 30 minutes; actual equipment/process qualification required.

N05 — Yogourmet: Original Yogurt Starter. Current supplier instructions; verify the product and sachet supplied locally.

N06 — Yogurt Made Simple, Washington State University Extension. Milk treatment, culture and fermentation principles; home-use holding periods are not transferred to this commercial booklet.

N07 — Oregon State University Extension: Yogurt. Covered refrigeration, mould disposal and texture changes after freezing.

N08 — UK government: Cooking safely in your business. Cooking/reheating reference of 75°C for 30 seconds and hot holding at 63°C. These are house operational choices, not asserted Cameroonian statutory limits.

N09 — FDA: Refrigerator Thermometers—Cold Facts about Food Safety. Refrigeration, freezing and time outside cold storage.

Bakery-folder publication and baguette workflow revision

User requested docs-report-publisher with docs_subfolder `bakery`. The canonical revised files are `docs/bakery/Nkambe_Bakery_Handbook.md` and its same-named PDF. An editable DOCX is supplied alongside them. The earlier what-next edition remains an earlier working version.

Consulted SRC21 (Commercial Baguette Production Guide), SRC27 (Staggered Baguette Production Schedule), SRC17 (five-batch operations manual), SRC05 (corrected manual) and SRC07 (equipment gaps and trial plan) again for this revision. No new source document was added to the 27-file discovery register. The original handbook summarized some corrections; the revised chapter 12 now contains the full operational synthesis.

Added: rack-sized formulation; raw versus cooled weight; corrected 23.925 kg source total; handling-loss allowance; capacity comparisons for 25/30/45-minute intervals; the 100-loaf/hour potential bottleneck; a consistent five-rack worked schedule; proof/rack/cooling occupancy; staffing handoffs; preheat, steam, recovery and fuel measurements; delay responses; and a campaign log with stepwise scale-up.

The 30-minute cadence is a proposed worked example. It is not a measured capability or a replacement for S-B01's recipe method. Its source-style 18-minute mixing/rest block is explicitly distinguished from S-B01's flour-and-water rest. Every final-proof window is 60 minutes, and the five oven-entry times are 30 minutes apart. The original 01:30–02:15 interval was only 45 minutes despite being labelled 60.

Calculation checks: S-B01 factor = 1.685; 80 × 300 g / 0.98 = 24,489.7959 g input; flour = 14,534.0035 g. Rounded formula totals 24,489.8 g and yields approximately 24,000.0 g after the assumed 2% loss. A 300 g piece at 15% bake/cooling loss weighs 255 g. The original 23,925 g batch gives 23,446.5 g after 2% handling loss. Five 80-piece racks are 400 pieces before rejects, with last oven exit at elapsed 04:52 in the worked example.

The source-guide 15–20-second steam dose and asserted recovery periods remain unverified. The revised workflow uses only manufacturer-approved steam/vent operation and measured recovery. It does not authorize overloading the mixer, overproofing dough, bypassing guards or sealing hot bread.

Publication uses the skill's A4 Markdown-to-PDF renderer, so pagination and styling differ from the initial Word-rendered PDF. The Markdown contains a real contents list rather than a Word-only placeholder. Original source documents and the existing business-plan publication are preserved.
