Cameroon HRIS/payroll — legal source and review register

Research date: 7 October 2026. Target confirmed by the user: private-sector SMEs with 10–250 employees. This is an engineering research register, not a signed statutory parameter release. A source being found, read or current-dated is not professional acceptance of a calculation. No payroll rates were changed.

Status vocabulary: **READ** = relevant primary-source text inspected; **INDEXED** = official indexed extracts available but direct fetch failed; **LOCATED** = official publication found, substantive text not verified; **REVIEW REQUIRED** = applicability, current amendments or interpretation still require qualified review. All sources require an amendment check through the eventual release date. A 2026 compilation alone does not prove no subsequent amendment exists.

Sources and retrieval boundaries

ID	Primary publication and precise locator	Date / effective-date evidence	Verification and release boundary
S01	DGI, CGI 2026; official publication page. PDF pp. 61, 73–76, 322–323, 378–382, 611–614 (one-based PDF pages)	Publication is labelled updated 1 January 2026. Individual provisions and annexed acts have distinct effective dates	READ selected articles and annexes; not a complete 1,034-page legal audit. Do not assign 1 January 2026 as the original effective date of every annexed rule
S02	Presidency, Finance Law 2025/012 of 17 December 2025 for 2026	Promulgation/title verified	LOCATED. DGI compilation used for inspected provisions; this does not claim full line-by-line finance-law amendment reconciliation
S03	CNPS official basic-text collection, 2021, Decree 2016/072, arts. 2–10; corroborating CNPS 2024 annual statistics, contribution table	Decree dated 15 February 2016; index reproduces text. Current release must verify commencement and amendments	INDEXED: direct PDF fetches failed/time out. The decree text was also READ in S01, PDF pp. 611–614, so the contribution-base finding does not rely solely on search snippets
S04	CNPS employer guidance, employer obligations	Web guidance; publication/last legal update not established	INDEXED; declaration/payment workflow corroboration, not proof of an official submission API or current file schema
S05	Cameroon Labour Code, Law 92/007 of 14 August 1992, hosted by ILO, arts. 69, 80, 89–93	Act date verified; article-specific amendments and implementing orders require review	READ. Government-hosted MINFOPRA copy was located but retrieval failed; ILO copy contains the legislative text, not a substitute opinion
S06	PM Decree 2023/00338 of 21 March 2023; PM Decree 2024/0168 of 23 February 2024	Both state commencement at signature	READ. Scope the later state-worker rule separately; do not apply a public-worker value to private SMEs. Check later amendments and applicable contractual/sector floors before activation
S07	OHADA AUDCIF official explanation, official library record	Adopted 26 January 2017, published 15 February 2017; effective 1 January 2018 for individual accounts, 2019 for the other categories identified by OHADA	Official explanation READ, complete signed act LOCATED through library. Obtain signed article-level evidence for retention, computerised books and mappings before declaring acceptance

ID	Primary publication and precise locator	Date / effective-date evidence	Verification and release boundary
S08	Presidency publication, Personal Data Protection Law 2024/017	Dated 23 December 2024	LOCATED; publication identity verified, substantive provisions/transition/implementing instruments not extracted. Do not invent a transition deadline, registration requirement, transfer approval or universal retention period
S09	Presidency, Local Taxation Law 2024/020	Dated 23 December 2024	LOCATED; site slug is misleading, displayed title is the local taxation law. Relevant consolidated TDL provisions READ in S01; law-to-compilation concordance remains review work
S10	BEAC payment regulations catalogue	Lists payment-services regulation of 21 December 2018 and ISO 20022 instruction in 2025	Catalogue READ, instrument details/applicability not certified. Determine obligations through the chosen regulated bank/PSP and Stoquify's actual role

Concise statutory observations

Tax (S01): arts. 30–34 concern salary bases, exemptions and benefits; art. 34 specifies professional-expense relief and a cap. Arts. 69/71 address progressive IRPP and CAC. Arts. 81–84 cover withholding, the below-62,000 gross threshold, remittance and DIPE. C86–C88 address TDL. Annexes contain RAV and CFC/FNE instruments; the latter specifies base rounding. Legacy annex deadlines and current filing practice must be reconciled before configuring one calendar. These are review locators, not a complete approved payroll formula.

Social contributions (S03, corroborated S01): pension and family-benefit contribution ceilings differ from occupational-risk treatment. Decree art. 8 bases occupational risk on remuneration less professional expenses; it does not apply the art. 4 ceiling. Sector and risk classification must be evidenced. Employer guidance (S04) separates declaration, payment and supporting receipts; it describes payment within 15 days following the relevant month.

Employment (S05): art. 69 addresses individual payslips and payment evidence; art. 80 distinguishes agricultural and non-agricultural working-time regimes. Arts. 89–93 govern paid leave, enhancements, taking leave and related payment. Contractual/collective terms and implementing instruments matter. Obtain the payslip-format order, overtime rules, relevant collective agreements, termination/indemnity rules and deduction limits for the pilot employer; this audit does not certify those details.

Minimum wage (S06): the 2023 text distinguishes private agricultural and other sectors; the 2024 text addresses state workers under the Labour Code. A single unqualified national default is unsuitable. More favourable sector/contract terms remain a separate review question.

Accounting/regional scope (S07/S10): OHADA's official explanation establishes an accounting framework, not one common national payroll tax schedule. Treat bank/PSP formats and settlement evidence as adapters; the existence of a regional regulation does not establish that Stoquify is licensed to provide payment services.

Legal-owner approval queue

Review item	Required decision and evidence	Engineering consequence
Employer applicability	Legal employer, sector/agreement, establishments, registrations, CNPS classification, workforce categories	Frozen employer profile; refuse unsupported or ambiguous cases

Review item	Required decision and evidence	Engineering consequence
Complete deduction/charge inventory	Signed applicability matrix covering IRPP/CAC, CNPS branches, CFC, FNE, RAV, TDL and other employer-specific obligations	Separate employee deductions, employer charges, recipient accounts and exemption evidence
Base and period semantics	Approved compensation taxonomy, benefits, expenses, reliefs, ceilings, fiscal versus tax year, same-day off-cycle and retro treatment	Explicit calculation context; distinguish missing input from genuine zero
Rounding and units	Rule-by-rule statutory base/result/payment rounding; ledger precision and XAF presentation	Versioned policies and boundary fixtures; no blanket zero-decimal or two-decimal rule
Declarations	Current authority template/schema, deadlines, submission channel, amendment procedure, receipt and settlement evidence	Manual export/upload first when necessary; no invented official API or automatic accepted status
Employment scenarios	Joiner/leaver, suspension, leave, termination, notice, overtime, loans/advances and permitted deductions	Effective-period employment segments, supported-case catalogue and explicit blockers
Privacy	Applicable law commencement, notices, rights, sensitive records, processor contracts, storage/transfer and deletion/hold requirements	Data inventory and retention schedule by record class; legal holds separate from employee deletion
Accounting	Signed chart mapping, evidence retention, postings and correction handling	Component-to-ledger reconciliation and retained source trail

Source release record to implement later: source URL, exact instrument/article, retrieved date, immutable retained copy/hash, jurisdiction, applicability, publication/effective/supersession dates, interpreter and independent reviewer, approved rule version, fixture IDs, deployed version and rollback. This audit has not manufactured source hashes for documents that were not downloaded or reviewer signatures that do not exist.

The package can be planned now. Production statutory activation stays blocked until these decisions have actual evidence, with unknown requirements kept visibly unresolved.
