Complete input worksheet with accompanying dates

Existing information is prefilled in the linked registers. Leave a date unfilled until the actual event or authoritative source is available; use NOT APPLICABLE with a reason for a conditional event that has not occurred. Do not provide raw secrets.

INPUT-01 — Your decision

Needed: Choose the next target stage, existing tenant, branches and modules. Existing tenant IDs/names and module states are supplied; do not invent a new ID.

Existing information: [{"id":"96a74406-95a9-49ad-8399-2bd005623787","name":"Stoquify Corp Lmt","countryCode":null,"requestedModules":["POS","Sales","Inventory","Accounting","Payment reconciliation","Payroll"]},{"id":"rds_org_001","name":"Wilkinson - Feeney 001","countryCode":"CM","requestedModules":["POS","Sales","Inventory","Accounting","Finance","Payment reconciliation","Payroll","Compliance"]},{"id":"rds_org_002","name":"McDermott, Greenholt and Johnson 002","countryCode":"CM","requestedModules":["POS","Sales","Inventory","Accounting","Finance","Payment reconciliation","Payroll","Compliance"]}]

Required dates: Business decision record: record the actual decision date. If an AI activation window is selected, use AgentActivationPackage.activationStartsAt and activationEndsAt. Other pilot planning dates are planning metadata, not newly invented database columns.

Expected data format: stage = development/demo/controlled pilot; organizationId = an existing listed ID; locationIds = selected existing locations; moduleSlugs = exact canonical slugs; optional AI pilot = yes/no

Who provides it: Product/business owner; nominate scope approver if not already formally appointed

Destination / gate: Decision record first; authorized engineering later applies TenantModuleConfiguration lifecycle with expectedRevision/previewHash/idempotencyKey. No universal pilot-scope appointment column is inferred.; MODULE_SETUP_AND_ENTITLEMENT, POS_G1_ACCOUNTABLE_APPROVAL.

When and validation: Before scoped pilot/configuration work. Existing tenant/location ownership, canonical module slugs, prerequisites, explicit scope and promotion criteria.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-02 — Appointments and identity resolution

Needed: Confirm or correct existing nominated responsibilities, authority scope/effective dates and conflicts. Resolve checker Yonga Claude in the supplied working copy versus Yonga Springfield in DB; clarify Kouatchoua mMark versus Kouatchoua Mark and repeated Tamen Marceline/Yonga Springfield accounts.

Existing information: 23 named candidate assignments, IDs/emails/employee/location links already extracted. Source documents disclaim authority/signature. No need to resubmit all names.

Required dates: Genuine appointment/delegation document effective-from/effective-to and date of signing/acceptance, where its contract requires them. AccountantAccessGrant uses consentGrantedAt/effectiveFrom/expiresAt; HrisManagerDelegation uses effectiveFrom/effectiveTo and existing evidence references. No generic appointmentAt or _UserRoles.assignedAt column is implemented.

Expected data format: Use existing userId/roleCode; approve/correct nomination; accountable appointing authority/reference; tenant/branch scope; effectiveFrom/effectiveTo; conflict/independence statement. Confirm usable work email only for selected real operators.

Who provides it: Authorized appointing business/governance owner; nominees acknowledge their actual responsibilities

Destination / gate: Relevant workflow-specific authorityReference/approval artifact, AccountantAccessGrant or HrisManagerDelegation when applicable. Employee provenance metadata is not an appointment store; a general verified human-appointment workflow was not established in this audit.; POS_G1_ACCOUNTABLE_APPROVAL, CAP-BRANCH-001, CAP-BRANCH-002, CAP-AI-001, CAP-AI-002.

When and validation: Before a person is credited with pilot or production authority. Identity-to-account match, accepted authority document, correct scope and separation of people rather than login IDs.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-03 — Qualified expert evidence

Needed: Obtain actual accounting and Cameroon country-pack reviewer qualification, appointment, independence and signed/attested review. Existing candidates are Tchana Nikita and Kouatchoua mMark; use them only if qualified and authorized.

Existing information: Candidate IDs already in named-candidates.json. CM source artifact hashes verify; requiredApproval reviewer/date/artifact fields are absent, productionUseAllowed=false, reviewStatus=PENDING_EXPERT_REVIEW.

Required dates: requiredApproval.reviewedAt, effectiveFrom, effectiveTo (optional/open-ended only when justified); actual document dates and source effective period. ComplianceAdapterConfig reviewedAt/approvedAt/officialSpecPublishedAt/officialSpecEffectiveFrom are separate fields.

Expected data format: Exact CM_CNPS_PRODUCTION_APPROVAL contract: actual reviewerIdentity, reviewedAt, effectiveFrom/effectiveTo, approvalArtifactFile, raw 64-hex SHA256 approvalArtifactHash and approvedFixtureFamilies; verifiable qualification/authority reference and conflict declaration in the authentic artifact.

Who provides it: Appointed qualified independent reviewers; engineering computes hashes from supplied genuine files

Destination / gate: docs/HR-Payroll/evidence/country-packs/CM/2026-07-19/manifest.json and co-located genuine approval artifact; runtime publication follows approved review. Runtime compliance review uses ComplianceAdapterConfig.reviewedById/reviewerQualification/reviewerConflictDeclared/reviewEvidenceHash.; statutory-country-pack-production-gate:source_artifact_expert_approval, POS_G1_ACCOUNTABLE_APPROVAL.

When and validation: Before production CNPS/statutory authority and relevant G1 decisions; not ordinary software development. Artifact bytes/hash, scope/version/source binding, authentic qualification/approval, effective dates and exact producer contracts; static nonempty checks alone are insufficient.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-04 — Accountable product/control decisions

Needed: Have the already nominated owners approve the 11 frozen POS G1 decisions or record required changes. Supply genuine authority and attestation, not additional names or signature images.

Existing information: 17 responsibility labels have existing candidate names. 33 role approval obligations, 0/11 approved decisions; technical13/13 and partial runtime conformance.

Required dates: For each of 33 G1 role obligations: actual freshAuthenticatedAt and approvedAt. For each of 11 decisions: future reviewOrExpiryAt. Attestation verifiedAt/reviewOrExpiryAt and signing-key validFrom/validUntil are also required by the evidence contract.

Expected data format: Use G1_APPROVAL_ROSTER.md and POS_G1_ACCOUNTABLE_APPROVAL field contract: selectedOption/rationale/effectiveVersion, contract binding, future reviewOrExpiryAt, approval authorityReference, freshAuthenticatedAt/approvedAt and trusted signature evidence.

Who provides it: Each legitimately appointed decision owner; infrastructure/security custodian supplies trusted public-key path and attestation integration

Destination / gate: docs/pos-enterprise-grade-audit/EXECUTION_06_G1_CONTRACT_APPROVAL_REGISTER.json; operator-controlled public-key file outside candidate repository; pos-g1-contract-gate.

When and validation: Before G1-controlled promotion beyond contract-scoped work. Frozen artifact/version/hash, required per-decision roles, authenticity, freshness, expiry and trusted Ed25519 envelope verification.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-05 — Real company, workforce and product inputs

Needed: For the selected real pilot entity, confirm legal/country setup and supply qualified classification evidence for employer CNPS sector/risk group and product tax treatment; validate real contract/calendar/leave/source records only for the selected workforce.

Existing information: rds_org_001 and rds_org_002 use CM/XAF/Africa-Douala, VAT_CM_STANDARD, SYSCOHADA_CM and IN_PROGRESS accounting setup. Both payrollCnpsFamilyAllowanceSector/payrollCnpsOccupationalRiskGroup values are null. Seeded company/tax/source values are not verified business facts.

Required dates: Employer/product classification source-effective dates and genuine review date in its evidence document; current schema does not provide a complete per-product tax-approval record. HR uses PayrollEmployee.hireDate/terminationDate, PayrollContract.effectiveFrom/effectiveTo, HrisWorkCalendar.reviewedAt/effectiveFrom/effectiveTo, HrisLeavePolicy.approvedAt/effectiveFrom/effectiveTo. Preserve business dates and period timezone.

Expected data format: Reviewed classification/reference with country/pack/version and effective dates; source documents through protected application workflows. Select existing item/employee/location IDs from extracts; engineering maps valid enum/config values.

Who provides it: Business owner and qualified accountant/country reviewer; authorized HR owner for workforce source approval

Destination / gate: OrganizationAccountingSettings payrollCnpsFamilyAllowanceSector/payrollCnpsOccupationalRiskGroup/setupStatus and relevant tax configuration; HrisWorkCalendar/HrisLeavePolicy/PayrollContract evidence fields. Exact product-tax implementation findings are in runtime tax assessment.; MODULE_SETUP_AND_ENTITLEMENT, statutory-country-pack-production-gate, COUNTRY_ADAPTER_SYNTHETIC_REVIEW_GAPS.

When and validation: Before real payroll, tax, fiscal output or real-data pilot. Supported fields/values, authentic source provenance, correct effective period and entity/item applicability; do not fabricate a blanket tax rate.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-06 — Provider and integration inputs

Needed: Identify only the providers/channels selected for the pilot and supply their official specifications, sandbox authorization and managed credential references through the deployment secret manager.

Existing information: 24 ProviderAccount records are DRAFT with missing settlement/suspense/fee ledger references;24 compliance adapter rows are SANDBOX/REQUIRES_EXPERT_REVIEW with synthetic channels/versions and absent official/reviewer evidence.

Required dates: ComplianceAdapterConfig officialSpecPublishedAt/officialSpecEffectiveFrom, reviewedAt, approvedAt, credentialExpiresAt and actual credentialRotatedAt if applicable. SettlementAccount

approvedAt/effectiveFrom/effectiveTo. Provider dates and managed-secret expiry come from the provider/operator, not invented defaults.

Expected data format: ProviderCode/channel/adapter, country/currency, officialSpecTitle/version/publishedAt/effectiveFrom/reference/hash, sandbox contract/authority and credentialReference/expiry. Engineering extracts and maps existing paymentRailId and ledger IDs; no passwords or raw secrets in reports.

Who provides it: Provider/account owner, integration operator and independent required country reviewer

Destination / gate: ProviderAccount, ComplianceAdapterConfig and supported module setupInputs; credentials remain in managed secret storage; MODULE_SETUP_AND_ENTITLEMENT, COUNTRY_ADAPTER_SYNTHETIC_REVIEW_GAPS.

When and validation: Before testing a real selected integration or making a real submission/payment. Implemented adapter matches specification, same-tenant account mapping, effective credentials, independent review and provider sandbox conformance.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-07 — Conditional AI pilot / operations

Needed: Only if AI/internal pilot is selected: confirm distinct Product and Security approvers, six operational responsibilities with distinct primary/backup coverage, escalation/runbooks and actual deployment/evidence endpoints.

Existing information: Product approver Kouatchoua Mark, Security owner Yonga Springfield, SRE Ronald Djakou and Support Etoo Naomie are existing nominees; there are no AgentDefinition/ActivationPackage/Owner/Approval/Certification rows. Some seeded tenants also lack required AI permissions.

Required dates: Product/security decidedAt/expiresAt; six owner acceptedAt/coverageStartsAt/coverageEndsAt (plus runtime owner validUntil when used); release activationStartsAt/activationEndsAt; certification passedAt/expiresAt; CI/governance/deployment/scheduler/alert/rotation times listed in TIME_RULES.md and external-required-timestamps.csv.

Expected data format: Follow AGENT_EXTERNAL_INPUTS, AGENT_OPERATIONAL_RELEASE and CREDENTIAL_CLASSIFICATION_AND_ROTATION contracts: real external directory IDs, approved references/dates/expiry, accepted runbook, primary/backup coverage, managed identity/reference IDs, release/CI hashes, endpoint references and authentic scheduler/alert evidence.

Who provides it: Appointed Product/Security/SRE/Support owners, infrastructure operator and external evidence authorities

Destination / gate: Three existing docs/agents-runtime JSON templates listed in assurance/required-input-contracts.json; supported runtime package workflows when scope is authorized; agent-external-input-readiness, agent-operational-release-gate, agent-credential-rotation-gate.

When and validation: Before optional AI internal pilot; not a prerequisite for general development. Real directory identity mapping (do not substitute DB IDs blindly), distinct approvers/backups, current release binding, authentic external evidence and operational readiness; passing does not itself activate.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-08 — Deployment inputs

Needed: Choose the actual pilot deployment target and responsible operator; the operator configures required secrets/identities and reports only presence/reference/rotation evidence.

Existing information: Local process and repository evidence do not establish deployed configuration. No raw credential values were extracted.

Required dates: Actual deployment, attestation, credential rotation/review and operational test timestamps from the deployment/evidence systems. Generated audit or file-modification time is not deployment/approval time.

Expected data format: Deployment/environment/reference, approved scope, public URL when applicable, managed secret reference names, trust anchor location and operator-owned verification evidence; no raw secret or recovery material

Who provides it: Deployment/SRE/security operator

Destination / gate: Deployment secret manager/environment and release evidence templates; not chat or checked-in secret files; release-evidence-ratchet, RELEASE_ENVIRONMENT_INPUTS.

When and validation: Before deployment/release validation. Environment-specific focused release checks and authentic operational evidence after engineering fixes.

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

INPUT-09 — Four existing stocking-unit choices

Needed: Confirm whether Orange juice 1 L and Mango nectar 1 L are stocked/sold by measured litre or by sealed one-litre package. Their names alone do not decide this. If packages, design a unit conversion and quantity-preserving migration rather than merely changing the unit label.

Existing information: [{"id":"rds_org_001_item_002","name":"Orange juice 1 L","unitId":"rds_org_001_unit_007","unit":"Liter"},{"id":"rds_org_001_item_013","name":"Mango nectar 1 L","unitId":"rds_org_001_unit_007","unit":"Liter"},{"id":"rds_org_002_item_002","name":"Orange juice 1

L","unitId":"rds_org_002_unit_007","unit":"Liter"},{"id":"rds_org_002_item_013","name":"Mango nectar 1 L","unitId":"rds_org_002_unit_007","unit":"Liter"}]

Required dates: Record the catalog decision and its intended effective business date in supporting evidence if a change is authorized. Item.updatedAt/Unit.updatedAt are written by the system and do not prove user approval. There is no dedicated stocking-unit approval timestamp in the inspected Item/Unit schema.

Expected data format: For the existing Orange juice 1 L and Mango nectar 1 L items in each reseeded tenant: measured litre or sealed one-litre package; approved conversion if packages are intended.

Who provides it: Inventory/catalog owner; existing candidate Tchana Rose with retail owner Tamen Max

Destination / gate: Supported Item.unitId and Unit.baseUnit/conversionRate workflow after review; preserve quantities if units change.; STOCKING_UNIT_CONFIRMATION.

When and validation: Before a trustworthy demonstration or real inventory use of these four items. Stocking/selling unit matches business meaning; quantity/value preserving conversion and POS tests if changed..

Your missing response/evidence location: _____

Actual event/source date(s), including timezone when an instant: _____

Effective period / review / expiry, where required: _____

Not applicable (reason), if conditional: _____

Exact G1 decision and approver worksheet

The prefilled 33-row G1 worksheet includes exact decision options, contract version/hash, existing named nominees and IDs, and empty fields for genuine authority/authentication/approval/expiry/signature evidence. It is a reporting worksheet, not a signed register or authorization.
