Prioritized gates and action owners

Machine-readable complete register contains every identified gate, proposed roles and current named candidates, exact affected IDs, required-field references, dependencies, source guards and next actions. All 601 individual validator checks are retained in gate-checks.csv. Passed static checks establish only what that check inspected.

Repository validators

Gate	Status	Stage	Proposed roles	Failed checks
inventory-valuation-truth-gate	PASS	development	inventory_controller, accounting_owner	0
ledger-close-truth-gate	PASS	development	accounting_owner, qualified_accounting_reviewer, financial_controller	0
payment-cash-truth-gate	PASS	development	payments_owner, treasury_owner	0
purchasing-ap-consolidation-gate	PASS	development	inventory_controller, controller_approver, fulfillment_owner	0
role-based-operating-cockpit-gate	PASS	development	product_owner, security_owner, database_migration_operator	0
statutory-country-pack-development-gate	PASS	development/sandbox	qualified_cameroon_country_pack_reviewer, accounting_owner	0
statutory-country-pack-production-gate	BLOCKED	production statutory authority	qualified_cameroon_country_pack_reviewer, accounting_owner	1
workflow-assurance-release-gate	PASS	development	qa_owner, sre_owner, security_owner	0
payroll-payments-declarations-development-gate	PASS	development/sandbox	financial_controller, controller_approver, accounting_owner	0
payroll-accounting-close-development-gate	PASS	development/sandbox	financial_controller, controller_approver, accounting_owner	0
hris-payroll-migration-development-gate	PASS	development/sandbox	financial_controller, controller_approver, accounting_owner	0
payroll-presence-readiness-gate	PASS	development	financial_controller, controller_approver, accounting_owner	0
payroll-trust-spine-readiness-gate	BLOCKED	development	financial_controller, controller_approver, accounting_owner	1
ai-copilot-guardrails-gate	PASS	development	product_approver, security_owner, sre_owner, support_owner	0
ci-release-readiness-gate	PASS	CI configuration	qa_owner, sre_owner, security_owner	0

Gate	Status	Stage	Proposed roles	Failed checks
agent-external-input-readiness	BLOCKED	internal pilot authoritative evidence capture	product_approver, security_owner, sre_owner, support_owner	12
module-surface-inventory	BLOCKED	development regression ratchet	inventory_controller, accounting_owner	174
release-evidence-ratchet	BLOCKED	production release evidence	qa_owner, sre_owner, security_owner	6
agent-credential-rotation-gate	BLOCKED	internal pilot independent approval	product_approver, security_owner, sre_owner, support_owner	31
agent-operational-release-gate	BLOCKED	internal pilot independent approval	product_approver, security_owner, sre_owner, support_owner	152
pos-g1-contract-gate	BLOCKED	G1 architecture/control accountable approval; production promotion	pos_architect, retail_operations_owner, qa_owner	11

Data and evidence reconstruction

Invariant	Count	Effect	Proposed engineering/operational owner
RECEIPT_SOURCE_MISMATCH	24	Trustworthy receipt history and stock-event reconstruction for the affected sources; unrelated synthetic development workflows may continue.	Warehouse/receiving manager with purchasing controller; inventory engineering implements and independent accountant verifies
SALES_LINE_AND_HEADER_TAX_MISMATCH	24	Affected sale completion/replay and trustworthy tax/source history; 24 line and 24 header failures concern the same 24 sales, not 48 sales.	Sales/POS manager with accountant; POS engineering implements validated synthetic corrections
MISSING_STOCK_EVENT	48	Inventory class-3 evidence reconciliation and any close-assurance check consuming it. Numeric stock-to-ledger drift is zero, but evidence continuity remains blocked.	Inventory integration engineer with inventory controller and independent accountant
GENERIC_PayrollRunLine_calculationSnapshot	24	Payroll component proof/posting and register provenance for 24 legacy payroll lines	Payroll engineer; payroll preparer and independent payroll reviewer
GENERIC_PayrollRunLine_ruleProvenance	24	Payroll rule/country-pack provenance for the same 24 lines	Payroll engineer; payroll rule owner and independent reviewer
GENERIC_POSOfflineEvent_payload	24	Replay of 24 PENDING_REPLAY legacy events	Offline POS engineer; POS supervisor
GENERIC_ProviderEvent_rawPayload	24	Verification/reconciliation of 24 RECEIVED events with signatureValid=false	Payment integration engineer; treasury/reconciliation operator
GENERIC_BusinessEvent_payload	24	Source traceability of 24 RECORDED generic events with null sourceType/sourceId	Business-event integration engineer; owning source-domain controller
GENERIC_BusinessEventOutbox_payload	24	Delivery evidence for 24 PENDING generic notification messages	Event-delivery engineer; operations owner

Invariant	Count	Effect	Proposed engineering/operational owner
GENERIC_FiscalDocument_canonicalPayload	24	Legal certification/submission truth for 24 DRAFT manual synthetic invoices	Fiscal document engineer; accounting/compliance preparer and independent reviewer
GENERIC_WorkflowAssuranceCheckDefinition_sourceTables	24	Trustworthy registry definitions; these 24 global definitions are observe-only (enforceMode=false), not 24 enforced gate failures	Assurance platform engineer; internal-controls owner
COUNTRY_ADAPTER_SYNTHETIC_REVIEW_GAPS	24	Real country-adapter expert approval/certification. Local fake/sandbox testing and fixture cleanup can continue without pretending to close the production review gate.	Compliance adapter engineer/configurator and a different qualified country reviewer for real approval

Account and module findings

CAPABILITY_ELIGIBILITY.md lists all 25 critical capability contracts across three tenants. In rds_org_001/rds_org_002, the full access-maintenance contract lacks users.roles.remove; this does not mean every read/assign action is blocked. Branch-close review/sign require missing permissions and valid manager/tenant scope. AI Product/Security/activation grants are missing from those tenants. All three tenants lack purchasing, so all nine AP request/approve/release tenant checks are module-blocked. No privileges or module selections were changed.

Production-only country approval and optional AI pilot requirements do not prevent unrelated development. Review source-marker failures and scanner false positives as engineering findings, not requests for extra signatures.

Product tax and stocking units

The machine-readable register also includes PRODUCT_TAX_CLASSIFICATION_UNVERIFIED (41 item references), ZERO_TAX_REASON_PROVENANCE_GAP (two unused zero-rate rows) and STOCKING_UNIT_CONFIRMATION (four item IDs). These semantic requirements are distinct from failed foreign keys and are not presented as existing runtime gate identifiers. Exact sources/IDs are in runtime/tax-classification-assessment.json.
