Roadmap Executive Summary

Outcome

The proposed skill has been renamed and created as:

`stoquify-prompt-execution-roadmap-publisher`

Its publication target is:

`docs/prompt-execution/`

What is complete

- New skill artifact created.
- Mandatory prompt-architect refinement stage defined.
- Execution evidence stage defined.
- Findings and risk stage defined.
- Implementation roadmap stage defined.
- Executive summary stage defined.
- Markdown/PDF publication contract defined.
- Safety, privacy and external-action controls defined.

Current blocker

The formal skill-validation command is blocked because the available Python runtimes cannot load the YAML dependency required by `quick_validate.py`. The validator logic was nevertheless exercised with a temporary in-memory YAML compatibility shim and returned `Skill is valid!`; this is recorded as evidence, not as a substitute for a formal PyYAML-backed run.

Recommended next action

Run the validator with a Python environment that includes PyYAML. PDF publication and the final destination checks have already passed.

Status

Area	Status
Skill rename and creation	Passed
Fixed report destination	Passed
Prompt refinement workflow	Passed by inspection
External/destructive action safety	Passed by inspection
Skill validator	Blocked by environment dependency

Area	Status
Validator logic compatibility check	Passed: `Skill is valid!`
PDF publication	Passed: 5 Markdown/PDF pairs
Final directory and artifact checks	Passed: exact set, non-empty PDFs, no intermediates
Failed work	0
Skipped work	0
Blocked work	2 formal-validator environment checks

Stage 8 status: Passed: 8; Failed: 0; Skipped: 0; Blocked: 2.
